Contents

1 Preliminary Concepts 1

1.1 Introduction 1
1.2 Some Problems Which Give Rise to Integral Equations 2
1.3 Conversion of Ordinary Differential Equations into Integral Equations 6
1.4 Classification of Linear Integral Equations 14
1.5 Integro-differential Equations 18

2 Fredholm Equations 22

2.1 Analogies with Matrix Algebra 22
2.2 Degenerate Kernels 29
2.3 Hermitian and Symmetric Kernels 40
2.4 The Hilbert-Schmidt Theorem 50
2.5 Hermitization and Symmetricization of Kernels 61
2.6 Solution of Integral Equations with Green's Function Type Kernels 68
2.7 Miscellaneous 73

3 Volterra Integral Equations 89

3.1 Types of Volterra Equations 89
3.2 Resolvent Kernel of Volterra Equation 93
3.3 Convolution Type Kernels 98
3.4 Some Miscellaneous Types of Volterra Integral Equations 108

4 Integral Equations and Transformations 121

4.1 Preliminary 121
4.2 Fourier Integral Equations 122
4.3 Laplace Integral Equations 129
4.4 Hilbert Transform 130
4.5 Finite Hilbert Transforms 133
4.6 Miscellaneous Integral Transforms 138

5 Approximate Methods 142

5.1 General 142
5.2 Non-linear Volterra Equations 142
5.3 Non-linear Fredholm Equations 146
5.4 Approximate Methods of Solution for Linear Integral Equations 150
5.5 Approximate Evaluation of Eigenvalues and Eigenfunctions 168

Appendices 181

A Repeated Integral 181
B The Bunyakovskii–Cauchy–Schwarz Inequalities 181
C A Continuity Theorem 182
D Convergence of Neumann Series 183
E Proof of Existence of Eigenvalue for Positive Definite Hermitian Kernel 184
F Convergence and Convergence in Mean 186
G Complete Sets of Orthonormal Functions 188
H Improper Integrals and Principal Values of Integrals 190
I Generalized Functions 191
