CONTENTS

Editorial Preface ix

Preface xi

CHAPTER 1 INTRODUCTION 1

1.1 Representations of dynamical systems . . 1
1.2 Nonlinear system 4
1.3 Outline of the Book 7
References 10

CHAPTER 2 SECOND ORDER SYSTEMS 11

2.1 Introduction 11
2.2 The perturbation method 13
2.3 Averaging methods 17
2.3.1 An interpretation of the result . . . 19
2.3.2 Extensions of the method 21
2.4 Other analytical methods 21
2.5 Phase plane topology 24
2.5.1 Singular points 25
2.5.2 Limit cycles 28
2.6 Phase plane trajectories 29
2.6.1 Type 0 system 32
2.6.2 Type 1 system 34
2.6.3 Type 2 system 35
2.7 Control applications 36
2.8 Summary 42
References 44
Problems 46

CHAPTER 3 ABSOLUTE STABILITY CRITERIA . . . 49

3.1 Introduction 49
3.2 The Liapunov method 50
3.2.1 Application to linear systems . . . 53
3.2.2 Application to nonlinear systems . . 55
3.3 Frequency domain results 59
3.3.1 The pole transformation 61
3.3.2 The zero transformation 61
3.3.3 A frequency criterion 63
3.4 The Popov criterion 64
3.4.1 Popov sector width 68

3.5 Circle criteria 68
3.6 Other criteria 71
3.6.1 Parabola criterion 72
3.6.2 The Dewey and Jury criterion . . . 72
3.6.3 The Haddad criterion 74
3.7 Limit cycle criteria 75
3.8 Instability criteria 77
3.9 Summary 78
References 80
Problems 83

CHAPTER 4 THE DESCRIBING FUNCTION METHOD . . 85

4.1 Introduction 85
4.2 Expressions for DF evaluation 86
4.2.1 Single valued nonlinearity 86
4.2.2 Double valued nonlinearity 88
4.3 DFs of specific nonlinearities 90
4.3.1 Ideal saturation 90
4.3.2 Odd power law 92
4.3.3 Relay with hysteresis and dead zone . 92
4.4 Approximate DF evaluation methods . . . 94
4.4.1 Polynomial expansion 94
4.4.2 Quantised approximation 95
4.4.3 Fourier series expansion 96
4.5 Properties of the DF of a SVNL 96
4.6 Stability determination 98
4.7 The sine plus bias describing function . 103
4.8 The general IDF 106
4.9 Asymmetrical oscillations 107
4.10 Limit cycle stability 111
4.11 Summary 118
References 119
Problems 121

CHAPTER 5 ADDITIONAL CONSIDERATIONS OF THE DESCRIBING FUNCTION METHOD . . . 125

5.1 Introduction 125
5.2 Harmonic response 126
5.3 DF accuracy 130
5.3.1 Distortion criteria 131
5.3.2 An exact banding method 132
5.4 Stability conjectures 133

5.4.1 Aizerman conjecture 133
5.4.2 Kalman conjecture 134
5.5 Counterexamples to the Aizerman conjecture 135
5.6 DF applications 139
5.7 DFs for frequency dependent nonlinearities 141
5.8 DF extensions 143
5.9 Combined modes 145
5.10 Summary 149
References 150
Problems 153

CHAPTER 6 LIMIT CYCLES IN RELAY SYSTEMS . . . 155

6.1 Introduction 155
6.2 Theoretical background 157
6.3 'A' loci for specific transfer functions . 160
6.4 Limit cycle solution 161
6.4.1 Relay with no dead zone 161
6.4.2 Relay with dead Zone 163
6.5 The stability of predicted oscillations . 168
6.6 Systems with multiple relays 171
6.7 Multiple pulse oscillations 172
6.8 Asymmetrical oscillations 175
6.9 Summary 178
References 179
Problems 181

CHAPTER 7 MULTIVARIABLE SYSTEMS 183

7.1 Introduction 183
7.2 Absolute stability criteria 189
7.2.1 Jury and Lee criterion 189
7.2.2 Circle criteria 192
7.2.3 Limit cycle criteria 194
7.3 Linearization 194
7.4 D.F. graphical methods 196
7.5 Limit cycle computation 198
7.6 Relay systems 200
7.7 Summary 204
References 205
Problems 209

Appendix I Tables of DFs and SBDFs 211
Appendix II Tables of A loci 219
Index 227
