

Contents

<i>Preface</i>	v
Chapter 1. Combinatorics and Calculus for Probability	1
1.1 Factorials and binomial coefficients	1
1.2 Basic results from calculus	7
Appendix: Poisson distribution as limit of the binomial distribution	11
Chapter 2. Basics of Elementary Probability	13
2.1 Foundation of probability	13
2.2 The concept of conditional probability	21
2.3 The law of conditional probability	26
2.4 Conditional probability and Bayesian probability	28
2.5 The concept of random variable	37
2.6 Expected value and standard deviation	39
Appendix: Proofs for expected value and standard deviation	50
Chapter 3. Useful Probability Distributions with Applications	53
3.1 The binomial and Poisson probability distributions	53
3.2 The normal and exponential probability densities	61
3.3 The chi-square test	75

Chapter 4. Surprising World of Poisson Probabilities	79
4.1 Fraud in a Canadian lottery	79
4.2 Santa Claus and a baby whisperer	81
4.3 Coupon collector's problem	83
Chapter 5. Computer Simulation and Probability	89
5.1 Introduction and random number generators	89
5.2 Simulation tools	93
5.3 Applications of computer simulation	98
5.4 Statistical analysis of simulation output	102
Appendix: Python programs for simulation	108
Solutions to Selected Problems	111
<i>Index</i>	121
