INTRODUCTION	1
CHAPTER I. Investigation of a New Class of Integral Equations and Applications to Estimation Problems (Filtering, Prediction, System Identification)	
1. Statement of the Problems and Main Results. . .	11
2. Investigation of the Scalar Equations	35
3. Investigation of the Vector Equations	43
4. Investigation of the Multidimensional Equations	48
5. Approximate Solution of the Integral Equations in the Space of Distributions	55
6. Asymptotics of the Spectrum of the Investigated Integral Equations.	59
7. General Theorems about Perturbations Preserving the Asymptotics of a Spectrum	65
8. Remarks and Examples.	78
9. Research Problems	81
10. Bibliographical Note.	82
CHAPTER II. Investigation of Integral Equations of the Static and Quasi-Static Fields and Applications to the Scattering from Small Bodies of Arbitrary Shape	
0. Introduction.	85
1. Statement of the Problems and Main Results. . .	86
2. Investigation of a Class of Linear Operator Equations	111
3. Integral Equations of Static Field Theory for a Single Body and Their Applications. Explicit Formulas for the Scattering Matrix in the Prob- lem of Wave Scattering from a Small Body of Arbitrary Shape	120
4. Variational Principles for Calculation of the Electrical Capacitance and Polarizability Tensors for Bodies of Arbitrary Shape and Two- Sided Estimates of the Tensors.	130
5. Inverse Problem of Radiation Theory	139
6. Wave Scattering by a System of Small Bodies; Formulas for the Scattering Amplitude; and Determination of the Medium Properties from the Scattering Data	140

	Page
Chapter II (cont.)	
7. Research Problems	152
8. Bibliographical Note.	154
CHAPTER III. Investigation of a Class of Nonlinear Integral Equations and Applications to Nonlinear Network Theory	
0. Introduction.	156
1. Statement of the Problems and Main Results. . .	157
2. Existence, Uniqueness and Stability of Solutions of Some Nonlinear Operator Equations and an Iterative Process to Solve the Equations. . . .	168
3. Existence, Uniqueness, and Stability of the Stationary Regimes in Some Nonlinear Networks. Stability in the Large and Convergence in the Nonlinear Networks.	174
4. Stationary Regime in a Nonlinear Feedback Amplifier	185
5. Research Problems	187
6. Bibliographical Note.	188
CHAPTER IV. Integral Equations Arising in the Open System Theory	
1. Calculation of the Complex Poles of Green's Function in Scattering and Diffraction Problems	190
2. Calculation of Diffraction Losses in Some Open Resonators.	196
3. Some Spectral Properties of Nonselfadjoint Integral Operators of Diffraction Theory. . . .	199
4. Research Problems	204
5. Bibliographical Note.	204
CHAPTER V. Investigation of Some Integral Equations Arising in Antenna Synthesis	
1. A Method for Stable Solution of an Equation of the First Kind.	206
2. Some Results Concerning the General Antenna Synthesis Problem	208
3. Formula for Approximation by Entire Functions .	211
4. Nonlinear Synthesis Problems.	215
5. Inverse Diffraction Problems.	221
6. Optimal Solution to the Antenna Synthesis Problem	226
7. Research Problems	232
8. Bibliographical Note.	233

	Page
APPENDIX 1. Stable Solution of the Integral Equation of the Inverse Problem of Potential Theory.	235
APPENDIX 2. Iterative Processes for Solving Boundary Value Problems.	240
APPENDIX 3. Electromagnetic Wave Scattering by Small Bodies.	247
APPENDIX 4. Two-Sided Estimates of the Scattering Amplitude for Low Energies.	253
APPENDIX 5. Variational Principles for Eigenvalues of Compact Nonselfadjoint Operators	261
APPENDIX 6. Boundary-Value Problems with Discontinuous Boundary Conditions	265
APPENDIX 7. Poles of Green's Function	268
APPENDIX 8. A Uniqueness Theorem for Schrödinger Equation.	271
APPENDIX 9. Stable Solution of Integral Equations of the First Kind with Logarithmic Kernels	275
APPENDIX 10. Nonselfadjoint Operators in Diffraction and Scattering.	278
APPENDIX 11. On the Basis Property for the Root Vectors of Some Nonselfadjoint Operators.	306
BIBLIOGRAPHICAL NOTES FOR APPENDICES	319
BIBLIOGRAPHY	321
LIST OF SYMBOLS.	337
AUTHOR INDEX	341
