

# Contents

<i>Preface</i>	vii
1. Introduction	1
References	3
2. Differential Equations of the Two-Phase Flow System	5
2.1 Introduction . . . . .	7
2.1.1 Governing Equations and Characteristics of the Homogeneous, Equilibrium Model . . . . .	7
2.1.2 Invariance of Characteristics to Change of Dependent Variable and EOS . . . . .	11
2.1.3 Eigenvectors and Compatibility Conditions . . . . .	13
2.1.4 The Ill-Posed Problem . . . . .	15
2.2 Mass and Momentum Equations . . . . .	17
2.3 The Energy Equation . . . . .	18
2.4 The Viscous Stress and Drag Function . . . . .	19
2.5 Energy Equation of Enthalpy . . . . .	22
References	22
3. Finite Differences of the Governing Equations	25
3.1 Introduction . . . . .	27
3.2 The Continuity Equation . . . . .	27
3.3 The Momentum Equations . . . . .	37
3.4 The Viscous Stresses . . . . .	45

3.5	The Internal Energy Equation . . . . .	51
3.6	Finite Difference for the Enthalpy Equation . . . . .	55
References		59
4.	A Pressure Iteration Scheme for Two-Phase Flow Modeling	61
4.1	Introduction . . . . .	63
4.2	Two-Fluid Model and Constitutive Correlations . . . . .	63
4.3	Numerical Solution Procedures . . . . .	66
4.4	Derivations of $\frac{\partial D_v}{\partial P^m}$ , $\frac{\partial D_d}{\partial P^m}$ , $\frac{\partial D_v}{\partial \theta^m}$ and $\frac{\partial D_d}{\partial \theta^m}$ . . . . .	67
4.5	Simulation of Two-Phase Jet Impinged on Vertical Plate .	78
4.6	Discussions . . . . .	79
References		82
5.	Pollution Particle Transport	83
5.1	Introduction . . . . .	85
5.2	The Mathematical Formulation . . . . .	87
5.2.1	Governing Equations of the Meso-Scale Meteorology	87
5.2.2	Plume Rise Model . . . . .	96
5.2.3	Eddy Diffusivity . . . . .	97
5.2.4	Quality Equations . . . . .	100
5.3	A Simple Model for Wind Field Computation from Sparse Data . . . . .	102
5.4	Downwind SO <sub>2</sub> Concentration Calculations for the Four Corners Generating Station . . . . .	104
5.5	Sulfur Dioxide Concentration Calculations for the Dickerson Power Plant . . . . .	106
5.6	Behavior of Massive LNG Spills from Storage Tanks at Prince William Sound, Alaska . . . . .	110
5.7	Conclusions . . . . .	112
References		114
6.	Nuclear Fission	117
6.1	Introduction . . . . .	117
6.2	The Yield of Fission Fragments . . . . .	118
6.3	The Fission Reaction Rate . . . . .	118

6.4	Possible Fission Reactions . . . . .	122
6.5	Calculations of the Released Energy $Q$ . . . . .	124
References		125
7.	Radiation Hydrodynamics	127
7.1	Introduction . . . . .	129
7.2	Inertial Confinement Fusion Problems . . . . .	130
7.3	Computational Method for Radiation Hydrodynamics . .	135
7.3.1	Introduction . . . . .	135
7.3.2	Finite Difference Equations . . . . .	137
7.3.3	Boundary Conditions . . . . .	145
7.3.4	Variable Eddington Factor . . . . .	147
7.4	Sample Calculations . . . . .	154
7.4.1	Introduction . . . . .	154
7.4.2	Diffusion Wave in a Slab . . . . .	155
7.4.3	Tests of the Variable Eddington Factors . . . . .	156
7.4.4	Compton Scattering Test Problems . . . . .	166
References		180
8.	Natural Convection between Two Heated Vertical Plates	181
8.1	Introduction . . . . .	183
8.2	Basic Equations and Boundary Conditions . . . . .	184
8.2.1	Formulation of the Problem . . . . .	184
8.2.2	Derivation of the Density Term . . . . .	185
8.2.3	Derivation of Governing Equations . . . . .	186
8.2.4	Boundary Conditions . . . . .	190
8.2.5	Normalization of the Governing Equations . . . . .	192
8.2.6	Laplace Operator, Vorticity and Stream Function	194
8.2.7	Non-Dimensional Forms of Governing Equations .	196
8.3	Finite Difference Forms . . . . .	197
8.3.1	Introduction . . . . .	197
8.3.2	Taylor Series Expansions . . . . .	197
8.3.3	Finite Difference Approximations for First and Second Derivatives . . . . .	199
8.3.4	Alternating-Direction Implicit Method . . . . .	201

8.3.5	Finite Difference Forms of Vorticity and Energy Equations . . . . .	203
8.3.6	Finite Difference Forms of Stream Function Equation . . . . .	209
8.3.7	Finite Difference Forms of Velocity Equations . . . . .	211
8.3.8	Approximation Forms for those Points Near or on the Boundary . . . . .	212
8.3.9	Finite Difference Forms of Nusselt Number . . . . .	217
8.4	Stability . . . . .	217
8.5	Results . . . . .	222
8.5.1	General . . . . .	222
8.5.2	Calculating Problems Where the Left Plate Temperature is Equal to One and Right Equal to Zero . . . . .	223
8.5.3	Calculating Problems Where the Temperatures of both Plates are with Linear Distributions . . . . .	227
8.6	Conclusions and Recommendations for Future Work . . . . .	229
8.6.1	Conclusions . . . . .	229
8.6.2	Recommendations for Future Work . . . . .	233
	References . . . . .	239
	Appendix A The Two-Phase Flow Computer Code . . . . .	241
A.1	Definition of the Variables and Symbols Used in the Code . . . . .	241
A.2	Input Data Descriptions . . . . .	247
A.3	Sample of the Input Data . . . . .	261
A.3.1	Two Phase Jet Impinged on Vertical Plate . . . . .	261
A.3.2	One-Dimensional Fluidized Bed . . . . .	266
A.4	Output Data Description . . . . .	272
A.4.1	The Output for the Two-Phase Jet Impinged on Vertical Plate . . . . .	272
A.5	Complete code listing . . . . .	273
A.5.1	The Two-Phase Code Program . . . . .	273
A.5.2	The Common Block for the Program Described in Section A.5.1 . . . . .	396
A.5.3	Equation of State of Water Including Liquid and Vapor . . . . .	397
A.6	CD-Rom of the Computer Program . . . . .	398
	References . . . . .	398

Appendix B	Photon Transport	399
B.1	Introduction . . . . .	400
B.2	The Variable Eddington Approximation Method . . . . .	401
B.3	The Variable Eddington Factor . . . . .	402
B.4	The Flux-limited Diffusion Description . . . . .	403
B.5	$S_n$ Radiative Transfer . . . . .	404
B.6	Monte Carlo Method . . . . .	413
B.6.1	Introduction . . . . .	413
B.6.2	Discretization of the Diffusion Equation . . . . .	416
B.6.3	Solving the Discretized Diffusion Equation by a Monte Carlo Technique . . . . .	419
References		423
Appendix C	Charge Particle Transport	425
C.1	Introduction . . . . .	426
C.2	Fokker-Planck-Boltzmann Equation . . . . .	426
C.3	Application of the Levermore Theory . . . . .	430
C.4	Spatial Discretization . . . . .	436
C.5	Time Integration . . . . .	438
References		440
Appendix D	Neutron Transport	441
D.1	Introduction . . . . .	442
D.2	Criticality of the Diffusion Equation . . . . .	442
D.3	Numerical Method for Solving the Diffusion Equation . . . . .	443
D.4	The Method of Obtaining $k$ . . . . .	445
D.5	Solution Method for One-Dimensional, Single Group Dif- fusion Equations . . . . .	446
D.6	Computational Method for a Two-Dimensional, Single Group Diffusion Equation . . . . .	449
References		452
