CONTENTS

Series Editor's Introduction	ix
About the Authors	xi
Acknowledgments	xii
Companion Website for This Book	xiii
1. Introduction and Overview	1
1.1 Overview of This Book	1
1.2 The Nature of Bounds on Variables	3
1.3 The Generalized Linear Model	5
1.4 Examples	12
2. Models for Singly Bounded Variables	19
2.1 GLMs for Singly Bounded Variables	19
2.2 Model Diagnostics	27
2.3 Treatment of Boundary Cases	28
3. Models for Doubly Bounded Variables	35
3.1 Doubly Bounded Variables and "Natural" Heteroscedasticity	35
3.2 The Beta Distribution: Definition and Properties	35
3.3 Modeling Location and Dispersion	37
3.4 Estimation and Model Diagnostics	44
3.5 Treatment of Cases at the Boundaries	50
4. Quantile Models for Bounded Variables	54
4.1 Introduction	54
4.2 Quantile Regression	54
4.3 Distributions for Doubly Bounded Variables With Explicit Quantile Functions	60
4.4 The CDF-Quantile GLM	64
5. Censored and Truncated Variables	72
5.1 Types of Censoring and Truncation	72
5.2 Tobit Models	74
5.3 Tobit Model Example	77
5.4 Heteroscedastic and Non-Gaussian Tobit Models	80

6. Extensions and Conclusions	84
6.1 Extensions and a General Framework	84
6.2 Absolute Bounds and Censoring	87
6.3 Multilevel and Multivariate Models	92
6.4 Bayesian Estimation and Modeling	97
6.5 Roads Less Traveled and the State of the Art	100
References	105
Index	110
