

Oleg N. Vassiliev

Monte Carlo Methods for Radiation Transport

Fundamentals and Advanced Topics

Contents

1	Introduction	1
1.1	The Monte Carlo Method	1
1.2	The Monte Carlo Method in Radiation Medical Physics.....	3
1.3	Estimation of π	5
1.4	Calculation of Volumes	6
1.5	Calculation of Integrals	8
	References	13
2	Sampling Techniques	15
2.1	Sampling a Uniform Distribution	15
2.2	The Inversion Method for Sampling Continuous Distributions.....	17
2.3	The Inversion Method for Sampling Discrete Distributions	20
2.4	Simple Rejection Method.....	21
2.5	Neumann's Method	24
2.6	Transformation of Random Variables	26
2.7	Sampling a Sum of Distributions.....	27
2.8	Compton Scattering	29
2.9	Superposition Method	31
2.10	Sampling a Normal Distribution	33
2.11	Random Points and Directions	37
2.12	Sampling a Joint Distribution	40
2.13	Simulating a Particle-Scattering Event.....	42
2.14	Algorithm Testing	43
	2.14.1 Histograms.....	43
	2.14.2 The χ^2 Test	45
	2.14.3 The Likelihood Ratio Test	47
	References	48
3	The Boltzmann Equation	49
3.1	Definitions	49
3.2	Introduction to the Boltzmann Equation	58
3.3	Adjoint Transport Equation.....	62

3.4	Overview of the Formalism.....	63
3.5	The Lagrangian Form of the Boltzmann Equation	65
3.6	The Boltzmann Equation for Multiplying Systems	67
3.7	Adjoint Transport Equation for Multiplying Systems.....	68
3.8	The Boltzmann Equation in the Presence of an External Magnetic Field	69
3.9	Simplified Forms of the Boltzmann Equation	73
3.9.1	Unscattered Fluence	73
3.9.2	The Boltzmann Equation in Planar Geometry	76
3.9.3	Energy Degradation Equation	77
3.9.4	Continuous Slowing Down Approximation.....	78
3.9.5	Continuous Slowing Down Approximation for Soft Collisions	81
3.9.6	Fokker-Planck Approximation.....	82
3.9.7	P_N Approximation in Planar Geometry	86
3.10	Fredholm Integral Equation of the Second Kind	90
3.11	The Boltzmann Equation in an Integral Form	94
3.12	The Boltzmann Equation as a Basis for Biasing Techniques	96
3.12.1	Source Biasing.....	96
3.12.2	Trajectory Biasing.....	98
	References	104
4	Particle Trajectories, Tallies, and Variance Reduction	105
4.1	Planning Monte Carlo Calculations	105
4.2	Neutral Particles.....	109
4.2.1	Starting a Trajectory.....	109
4.2.2	Stepping to the Next Collision Point	110
4.2.3	Interaction	114
4.3	Tallies.....	115
4.3.1	Surface Crossing Tally	116
4.3.2	Boundary Crossing Tally	116
4.3.3	Collision Tally	117
4.3.4	Track End Tally.....	118
4.3.5	Path Length Tally.....	118
4.3.6	Adjoint Function Tally	120
4.3.7	Other Tallies	122
4.4	Variance Reduction	125
4.4.1	Algorithm Efficiency	125
4.4.2	Particle Splitting	127
4.4.3	Russian Roulette.....	128
4.4.4	Forced Collisions	128
4.4.5	Exponential Transform.....	131
4.4.6	Using Symmetry.....	132
4.4.7	Correlated Sampling	136
4.5	Approximate Acceleration Techniques	138
	References	139
