# A Perspective on Canonical Riemannian Metrics

 Birkhäuser

# Contents

<b>Introduction</b>	<b>xi</b>
<b>1 Basic Concepts of Riemannian Geometry</b>	<b>1</b>
1.1 Moving frames: Levi-Civita connection, structure equations and curvatures . . . . .	1
1.1.1 Levi-Civita connection, first structure equation and covariant derivatives . . . . .	1
1.1.2 Second structure equation and the Riemann tensor . . . . .	6
1.1.3 Ricci, scalar and sectional curvatures . . . . .	10
1.2 General frame: everything with Christoffel symbols . . . . .	14
1.2.1 Levi-Civita connection and covariant derivatives revisited . . . . .	14
1.2.2 Riemann and Ricci curvatures revisited . . . . .	15
1.2.3 Covariant derivatives revisited, Hessian and Laplacian . . . . .	16
1.3 Back to moving frames: the decomposition of the curvature tensor . . . . .	19
1.4 Other curvatures: $A$ , $B$ , $C$ . . . . .	22
<b>2 Commutations and Variations</b>	<b>27</b>
2.1 Commutation formulas . . . . .	27
2.2 Variations of curvatures tensors and other geometric quantities . . . . .	33
2.2.1 General variations . . . . .	33
2.2.2 Conformal deformations . . . . .	39
2.2.3 Aubin's deformation . . . . .	45
<b>3 The Weyl Tensor</b>	<b>51</b>
3.1 General properties . . . . .	51
3.1.1 Some formulas . . . . .	51
3.1.2 Some inequalities . . . . .	53
3.1.3 The Weyl-Schouten and Aubin theorems . . . . .	57
3.2 The case of dimension four . . . . .	57
3.2.1 Self-dual and anti-self-dual parts of $W$ . . . . .	58
3.2.2 The Derdzinski basis . . . . .	58
3.2.3 Special formulas . . . . .	59

3.2.4	Integral identities and topology . . . . .	65
3.2.5	A Kato inequality . . . . .	67
<b>4</b>	<b>Curvature Conditions</b>	<b>71</b>
4.1	Old and new canonical metrics: algebraic and analytic conditions . . . . .	71
4.1.1	Ricci solitons . . . . .	76
4.2	Canonical metrics revisited: equivalent conditions . . . . .	77
4.3	The rigid classes: $\mathcal{SF}_f$ , $\mathcal{LS}_f$ , $\mathcal{LSE}_f$ and $\mathcal{PR}_f$ . . . . .	81
4.4	The class $\mathcal{HC}_f$ . . . . .	83
4.4.1	Rigidity and characterization results . . . . .	83
4.4.2	Two examples . . . . .	87
4.5	The class $\mathcal{Y}_f$ : a possible generalization of the Yamabe problem . . . . .	89
4.5.1	An obstruction . . . . .	89
4.5.2	An example . . . . .	91
4.5.3	An existence result in Euclidean space . . . . .	92
4.6	Non-gradient canonical metrics . . . . .	102
4.6.1	The class $\mathcal{SF}_X$ . . . . .	104
4.6.2	The classes $\mathcal{LS}_X$ and $\mathcal{LSE}_X$ . . . . .	104
4.6.3	The class $\mathcal{HC}_X$ . . . . .	105
4.6.4	The class $\mathcal{Y}_X$ . . . . .	107
4.7	Final remarks and open problems . . . . .	107
<b>5</b>	<b>Critical Metrics of Riemannian Functionals</b>	<b>109</b>
5.1	The Einstein–Hilbert functional . . . . .	109
5.2	Quadratic curvature functionals . . . . .	112
5.2.1	A basis . . . . .	112
5.2.2	Remarks on two special cases . . . . .	113
5.3	Some rigidity results for quadratic functionals . . . . .	115
5.3.1	The Euler-Lagrange equations . . . . .	118
5.3.2	Proofs of Theorem 5.4 and Theorem 5.5 . . . . .	120
5.3.3	Proof of Theorem 5.7 . . . . .	126
5.3.4	Proof of Theorem 5.8 . . . . .	128
5.3.5	The Euler-Lagrange equation for $\mathfrak{F}_{t,s}$ . . . . .	131
<b>6</b>	<b>Bochner-Weitzenböck Formulas and Applications</b>	<b>135</b>
6.1	A general Bochner-Weitzenböck formula . . . . .	135
6.1.1	General dimension . . . . .	135
6.1.2	Dimension four and an integral identity . . . . .	136
6.2	Some applications . . . . .	137
6.2.1	Harmonic Weyl and Einstein manifolds: the first Bochner-Weitzenböck formula . . . . .	137
6.2.2	Rigidity results for Einstein manifolds . . . . .	138
6.2.3	A general result on four-dimensional manifolds . . . . .	140

6.3	Higher-order Bochner-Weitzenböck formulas on Einstein manifolds	145
6.3.1	Rough formulas . . . . .	145
6.3.2	The second Bochner-Weitzenböck formula . . . . .	149
6.3.3	A rigidity result for Einstein manifolds . . . . .	150
<b>7</b>	<b>Ricci Solitons: Selected Results</b>	<b>159</b>
7.1	Preliminary results . . . . .	161
7.1.1	Fundamental formulas for Ricci solitons . . . . .	161
7.1.2	The tensor $D$ and the integrability conditions . . . . .	165
7.2	Rigidity I: pointwise conditions . . . . .	167
7.2.1	Compact shrinkers with strictly positive sectional curvature	167
7.2.2	Further results in the non-necessarily gradient case . . . . .	172
7.3	Rigidity II: integral conditions . . . . .	174
7.3.1	The compact case: integral pinching conditions . . . . .	174
7.3.2	The non-compact case: $L^1$ conditions and integral curvature decay . . . . .	178
7.4	Rigidity III: vanishing conditions on the Weyl tensor . . . . .	191
7.4.1	A key integral formula . . . . .	194
7.4.2	Proof of the results . . . . .	196
7.5	Rigidity IV: Weyl scalars . . . . .	200
7.5.1	Weyl scalars on a Ricci soliton . . . . .	202
7.5.2	Main results . . . . .	205
7.5.3	Special cases . . . . .	208
<b>8</b>	<b>Existence Results of Canonical Metrics on Four-Manifolds</b>	<b>213</b>
8.1	A new variational problem: Weak harmonic Weyl metrics . . . . .	213
8.2	The Euler-Lagrange equation . . . . .	217
8.2.1	Critical metrics . . . . .	217
8.2.2	The PDE for the conformal factor . . . . .	219
8.3	Existence of minimizers . . . . .	219
8.3.1	Proof of Theorem 8.2 . . . . .	219
8.3.2	Some preliminary results . . . . .	220
8.3.3	Existence . . . . .	221
8.3.4	Uniqueness . . . . .	225
8.3.5	Further results . . . . .	228
