

Contents

<i>Preface</i>	vii
1. Preliminaries and Notations	1
2. Classical Approximation Theorems	5
3. Operational Calculus in One Variable	17
4. Differential Forms	23
5. The $\bar{\partial}$ -Operator	27
6. The Equation $\bar{\partial}u = f$	31
7. The Oka–Weil Theorem	36
8. Operational Calculus in Several Variables	43
9. The Šilov Boundary	50
10. Maximality and Radó’s Theorem	57
11. Analytic Structure	64
12. Algebras of Analytic Functions	71
13. Approximation on Curves in $\mathbb{C}^n$	77
14. Uniform Approximation on Disks in $\mathbb{C}^n$	82
15. The First Cohomology Group of a Maximal Ideal Space	87
16. The $\bar{\partial}$ -Operator in Smoothly Bounded Domains	96
17. Manifolds without Complex Tangents	111
18. Submanifolds of High Dimension	122
19. Generators	131
20. The Fibers over a Plane Domain	137
21. Examples of Hulls	143
22. Solutions to Some Exercises	150
<i>Bibliography</i>	157
<i>Index</i>	161
