<b>Preface</b>	xi
<b>Acknowledgements</b>	xii
<b>1 Introduction</b>	1
1.1 Finance insights	1
1.2 Asset price assumptions	2
1.3 Mathematical and statistical problems	2
1.4 Numerical methods	2
1.5 Excel solutions	3
1.6 Topics covered	3
1.7 Related Excel workbooks	5
1.8 Comments and suggestions	5
<b>Part One Advanced Modelling in Excel</b>	7
<b>2 Advanced Excel functions and procedures</b>	9
2.1 Accessing functions in Excel	9
2.2 Mathematical functions	10
2.3 Statistical functions	12
2.3.1 Using the frequency function	12
2.3.2 Using the quartile function	14
2.3.3 Using Excel's normal functions	15
2.4 Lookup functions	16
2.5 Other functions	18
2.6 Auditing tools	19
2.7 Data Tables	20
2.7.1 Setting up Data Tables with one input	20
2.7.2 Setting up Data Tables with two inputs	22
2.8 XY charts	23
2.9 Access to Data Analysis and Solver	26
2.10 Using range names	27
2.11 Regression	28
2.12 Goal Seek	31

---

2.13	Matrix algebra and related functions	33
2.13.1	Introduction to matrices	33
2.13.2	Transposing a matrix	33
2.13.3	Adding matrices	34
2.13.4	Multiplying matrices	34
2.13.5	Matrix inversion	35
2.13.6	Solving systems of simultaneous linear equations	36
2.13.7	Summary of Excel's matrix functions	37
	Summary	37
<b>3</b>	<b>Introduction to VBA</b>	<b>39</b>
3.1	Advantages of mastering VBA	39
3.2	Object-oriented aspects of VBA	40
3.3	Starting to write VBA macros	42
3.3.1	Some simple examples of VBA subroutines	42
3.3.2	MsgBox for interaction	43
3.3.3	The writing environment	44
3.3.4	Entering code and executing macros	44
3.3.5	Recording keystrokes and editing code	45
3.4	Elements of programming	47
3.4.1	Variables and data types	48
3.4.2	VBA array variables	48
3.4.3	Control structures	50
3.4.4	Control of repeating procedures	51
3.4.5	Using Excel functions and VBA functions in code	52
3.4.6	General points on programming	53
3.5	Communicating between macros and the spreadsheet	53
3.6	Subroutine examples	56
3.6.1	Charts	56
3.6.2	Normal probability plot	59
3.6.3	Generating the efficient frontier with Solver	61
	Summary	65
	References	65
	Appendix 3A The Visual Basic Editor	65
	Stepping through a macro and using other debug tools	68
	Appendix 3B Recording keystrokes in 'relative references' mode	69
<b>4</b>	<b>Writing VBA user-defined functions</b>	<b>73</b>
4.1	A simple sales commission function	73
4.2	Creating Commission(Sales) in the spreadsheet	74
4.3	Two functions with multiple inputs for valuing options	75
4.4	Manipulating arrays in VBA	78
4.5	Expected value and variance functions with array inputs	79
4.6	Portfolio variance function with array inputs	81
4.7	Functions with array output	84
4.8	Using Excel and VBA functions in user-defined functions	85

4.8.1	Using VBA functions in user-defined functions	85
4.8.2	Add-ins	86
4.9	Pros and cons of developing VBA functions	86
	Summary	87
	Appendix 4A Functions illustrating array handling	88
	Appendix 4B Binomial tree option valuation functions	89
	Exercises on writing functions	94
	Solution notes for exercises on functions	95
 <b>Part Two Equities</b>		 99
<b>5</b>	<b>Introduction to equities</b>	101
<b>6</b>	<b>Portfolio optimisation</b>	103
6.1	Portfolio mean and variance	103
6.2	Risk–return representation of portfolios	105
6.3	Using Solver to find efficient points	106
6.4	Generating the efficient frontier (Huang and Litzenberger’s approach)	109
6.5	Constrained frontier portfolios	111
6.6	Combining risk-free and risky assets	113
6.7	Problem One—combining a risk-free asset with a risky asset	114
6.8	Problem Two—combining two risky assets	115
6.9	Problem Three—combining a risk-free asset with a risky portfolio	117
6.10	User-defined functions in Module1	119
6.11	Functions for the three generic portfolio problems in Module1	120
6.12	Macros in ModuleM	121
	Summary	123
	References	123
<b>7</b>	<b>Asset pricing</b>	125
7.1	The single-index model	125
7.2	Estimating beta coefficients	126
7.3	The capital asset pricing model	129
7.4	Variance–covariance matrices	130
7.5	Value-at-Risk	131
7.6	Horizon wealth	134
7.7	Moments of related distributions such as normal and lognormal	136
7.8	User-defined functions in Module1	136
	Summary	138
	References	138
<b>8</b>	<b>Performance measurement and attribution</b>	139
8.1	Conventional performance measurement	140
8.2	Active–passive management	141
8.3	Introduction to style analysis	144

8.4	Simple style analysis	145
8.5	Rolling-period style analysis	146
8.6	Confidence intervals for style weights	148
8.7	User-defined functions in Module1	151
8.8	Macros in ModuleM	151
	Summary	152
	References	153
<b>Part Three Options on Equities</b>		<b>155</b>
<b>9</b>	<b>Introduction to options on equities</b>	<b>157</b>
9.1	The genesis of the Black–Scholes formula	158
9.2	The Black–Scholes formula	158
9.3	Hedge portfolios	159
9.4	Risk-neutral valuation	161
9.5	A simple one-step binomial tree with risk-neutral valuation	162
9.6	Put–call parity	163
9.7	Dividends	163
9.8	American features	164
9.9	Numerical methods	164
9.10	Volatility and non-normal share returns	165
	Summary	165
	References	166
<b>10</b>	<b>Binomial trees</b>	<b>167</b>
10.1	Introduction to binomial trees	167
10.2	A simplified binomial tree	168
10.3	The Jarrow and Rudd binomial tree	170
10.4	The Cox, Ross and Rubinstein tree	173
10.5	Binomial approximations and Black–Scholes formula	175
10.6	Convergence of CRR binomial trees	176
10.7	The Leisen and Reimer tree	177
10.8	Comparison of CRR and LR trees	178
10.9	American options and the CRR American tree	180
10.10	User-defined functions in Module0 and Module1	182
	Summary	183
	References	184
<b>11</b>	<b>The Black–Scholes formula</b>	<b>185</b>
11.1	The Black–Scholes formula	185
11.2	Black–Scholes formula in the spreadsheet	186
11.3	Options on currencies and commodities	187
11.4	Calculating the option’s ‘greek’ parameters	189
11.5	Hedge portfolios	190
11.6	Formal derivation of the Black–Scholes formula	192

11.7	User-defined functions in Module1	194
	Summary	195
	References	196
<b>12</b>	<b>Other numerical methods for European options</b>	<b>197</b>
12.1	Introduction to Monte Carlo simulation	197
12.2	Simulation with antithetic variables	199
12.3	Simulation with quasi-random sampling	200
12.4	Comparing simulation methods	202
12.5	Calculating greeks in Monte Carlo simulation	203
12.6	Numerical integration	203
12.7	User-defined functions in Module1	205
	Summary	207
	References	207
<b>13</b>	<b>Non-normal distributions and implied volatility</b>	<b>209</b>
13.1	Black–Scholes using alternative distributional assumptions	209
13.2	Implied volatility	211
13.3	Adapting for skewness and kurtosis	212
13.4	The volatility smile	215
13.5	User-defined functions in Module1	217
	Summary	219
	References	220
 <b>Part Four Options on Bonds</b>		 <b>221</b>
<b>14</b>	<b>Introduction to valuing options on bonds</b>	<b>223</b>
14.1	The term structure of interest rates	224
14.2	Cash flows for coupon bonds and yield to maturity	225
14.3	Binomial trees	226
14.4	Black’s bond option valuation formula	227
14.5	Duration and convexity	228
14.6	Notation	230
	Summary	230
	References	230
<b>15</b>	<b>Interest rate models</b>	<b>231</b>
15.1	Vasicek’s term structure model	231
15.2	Valuing European options on zero-coupon bonds, Vasicek’s model	234
15.3	Valuing European options on coupon bonds, Vasicek’s model	235
15.4	CIR term structure model	236
15.5	Valuing European options on zero-coupon bonds, CIR model	237
15.6	Valuing European options on coupon bonds, CIR model	238
15.7	User-defined functions in Module1	239
	Summary	240
	References	241

<b>16</b>	<b>Matching the term structure</b>	243
16.1	Trees with lognormally distributed interest rates	243
16.2	Trees with normal interest rates	246
16.3	The Black, Derman and Toy tree	247
16.4	Valuing bond options using BDT trees	248
16.5	User-defined functions in Module1	250
	Summary	252
	References	252
<b>Appendix</b>	<b>Other VBA functions</b>	253
	Forecasting	253
	ARIMA modelling	254
	Splines	256
	Eigenvalues and eigenvectors	257
	References	258
