Part I Structure Theory

1	Stems, Mappings and Near-Rings	3
1.1	Basic Group Theory	3
1.1.1	Sylow Theory	3
1.1.2	The Jordan-Hölder Theorem.....	4
1.1.3	Solvable, Supersolvable and Nilpotent Groups	4
1.2	Homological Algebra and Category Theory	5
1.3	Topology	6
1.3.1	The Kuratowski Closure Axioms.....	6
1.4	Stems and Near-Rings	7
1.4.1	Star Notation	7
1.4.2	Pre-Near-Rings	7
1.4.3	Conventions and Notation	8
1.4.4	Examples of p.n.r. and of Near-Rings	9
1.5	Hosting	10
1.6	Ideals.....	11
1.7	Subdirect Products of Near-Rings	14
1.8	Sideals and Near-Ring Groups	15
1.8.1	Generalisations	16
1.8.2	Right Near-Ring Groups	17
1.8.3	Highly Non-standard Terminology	17
1.8.4	Sub-Structures and Mideals	18
1.8.5	Faithfulness	19
1.8.6	Monogenicity	20
1.8.7	Some Two-Sided Sideals	21
1.8.8	The Weak Left Ideal Property	22
1.8.9	Rings and Modules.....	23
1.9	Semi-simplicity	23

1.10	Prime and Semi-prime Ideals	24
1.10.1	Prime Ideals	24
1.10.2	Semi-prime Ideals	25
1.10.3	Complements of Prime and Semi-prime Ideals	26
1.10.4	Prime and Semi-prime Ideals	28
1.11	Near-Fields	29
1.12	\mathcal{A} -Matrices	29
1.13	Functions and Function Composition	30
1.14	The δ Operator and Phomomorphisms	30
1.14.1	The δ Operator	30
1.14.2	Phomomorphisms	31
1.15	Annihilators	32
1.16	Conjugacy and Annihilators	34
1.17	Sylow Subgroups	35
1.18	The Zeroiser Ideal	36
1.19	The Core of a Left Ideal	37
1.20	Anti-chains of Subgroups	37
1.21	Subsets	39
1.21.1	Generating Near-Rings	40
1.21.2	Lifting Near-Rings	41
1.22	Nil and Nilpotent Sets	41
1.22.1	Sums of Nil Ideals	42
1.22.2	Sums of Nilpotent Ideals	43
1.23	Cores	43
1.24	Classes of Near-Rings	47
1.24.1	Distributively Generated and F-Near-Rings	47
1.24.2	Class \mathcal{F} Near-Rings	49
1.24.3	The \mathcal{F}_j Cores, ($j = 1, 2, 3$)	50
1.24.4	Constant and Near-Constant Near-Rings	50
1.24.5	Opposites	51
1.24.6	Non-Zero-Symmetric Near-Rings	51
1.25	The Distributor and the Annular Ideal	52
1.25.1	The Distributor Ideal	52
1.25.2	The Multiplicative Centre	53
1.25.3	The Annular Ideal	54
1.26	Bi-distributive Stems	55
1.27	Subgroup Series	57
1.27.1	Weak Distributivity	57
1.27.2	Annularity	57
1.27.3	$N_{(+\times)}$ -Nilpotence	58
1.28	Modular Ideals	58
1.29	Quasi-regular Left Ideals	60
1.29.1	Quasi-regularity in Rings	61

1.30	Pseudo-Rings	63
1.31	Propriety	63
1.31.1	“Left” and “Right” Confusion	63
1.31.2	Proper Structures	64
1.31.3	Transferred Epithets.....	64
1.31.4	Problematic Terminology	65
1.32	An Unsettling Homomorphism	65
2	Near-Ring Theory	67
2.1	Pre-Near-Ring Construction Conditions and the Associativity Core	67
2.1.1	Host Determination Strategies	68
2.1.2	Distributive Generation	69
2.1.3	Co-structures: A Sort of Duality.....	70
2.1.4	Reduced Free Groups and Another Sort of Duality	74
2.1.5	Construction Conditions and F-Near-Rings	75
2.1.6	Bounds on Associativity Checking	76
2.2	Coupling and Dickson Near-Rings	77
2.2.1	\mathcal{D} -Near-Rings	78
2.3	Affine Near-Rings	78
2.4	Near-Rings Hosted by Semi-direct Products	80
2.4.1	Near-Rings Hosted by D_n	82
2.5	Ideas from Mathematical Logic and Universal Algebra.....	84
2.5.1	Equational Products	84
2.5.2	Boolean Algebras and Boolean Rings.....	86
2.5.3	Boolean Near-Rings.....	86
2.5.4	Finite Boolean Near-Rings	89
2.5.5	Partially Ordered Sets	91
2.5.6	Lattices	94
2.5.7	Finiteness Conditions: Chains, Intersections, Generators	97
2.5.8	Ultra-Products	100
2.6	Adjoining an Identity	102
2.7	Planarity	103
2.7.1	The Ferrero Construction	103
3	Near-Fields	105
3.1	Near-Fields	106
3.1.1	Near-Fields Not of Characteristic 2	107
3.1.2	General Near-Fields	108
3.2	Commutators and the Sub-near-Field \mathcal{L}	111
3.2.1	The Sub-near-Field \mathcal{F}	112
3.3	Finite Near-Fields	113
3.3.1	The Smallest Proper Near-Field	113
3.3.2	General Cases	116
3.3.3	The Normal Core of \mathcal{D}^*	117
3.3.4	The Multiplicative Centre.....	119

3.3.5	The Multiplicative Group Structure of Finite Near-Fields	120
3.3.6	Presentations for Finite Near-Fields with S_2 Cyclic	122
3.3.7	\mathfrak{Z} -Group Properties	123
3.3.8	The Product of All the Non-zero Elements	125
3.4	Finite Dickson Near-Fields	126
3.4.1	Coupling Maps and Dickson Near-Fields	128
3.4.2	A Theorem Reported by Marshall Hall	131
3.4.3	The Smallest Proper Near-Field Having All Sylow Subgroups Cyclic	132
3.4.4	The Algebra of the Dickson Process	133
3.4.5	A Generalisation of the Dickson Process	134
3.4.6	The Historical Dickson Process	135
3.4.7	When N^* Is a \mathfrak{Z} -Group	140
3.4.8	Multiplication in Finite Dickson Near-Fields	141
3.4.9	Isomorphism in Finite Dickson Near-Fields	145
3.4.10	Sub-near-Fields	145
3.4.11	Number-Theoretic Issues	147
3.4.12	Near-Field Automorphisms	147
3.4.13	Prime Divisors of δ : Hall's Theorem	148
3.4.14	\mathcal{L} and N	150
3.4.15	An Intrinsic Characterisation of Dickson Near-Fields ...	150
3.5	Group Structure of N^*	151
3.5.1	Presentations for Solvable Near-Fields with S_2 Quaternionic	152
3.5.2	Presentation for Non-Dickson Solvable Cases	155
3.6	Frobenius Groups	156
3.6.1	Basics	156
3.6.2	Sharply 2-Transitive Groups	158
3.6.3	Affine Groups	159
3.6.4	Near-Fields to Sharply 2-Transitive Groups	159
3.6.5	Further Affine Groups	160
3.6.6	Sharply 2-Transitive Groups to Near-Fields	161
3.6.7	Dickson and Non-Dickson Near-Fields	162
3.7	Finite Non-Dickson Near-Fields	162
3.7.1	A Classification Lemma	164
3.7.2	Element Orders	165
3.8	General Finite Non-fields	165
3.9	Infinite Near-Fields	167
3.9.1	Characteristic Zero	167
3.10	A Continuing Story	168

Part II Near-Rings Hosted by Classes of Groups

4	Near-Rings on Groups with Low Order	171
4.1	Small Non-abelian Groups.....	172
4.1.1	Groups with Order 16.....	173
4.1.2	Groups with Order 18.....	179
4.1.3	Non-abelian Groups with Order 21	179
4.1.4	Groups with Order 24.....	183
4.1.5	Groups with Order 27.....	185
4.1.6	Coda	185
5	Near-Rings on Some Families of Groups	187
5.1	Finite Symmetric Groups	187
5.2	Finite Simple Non-abelian Groups	187
5.2.1	Isotopy	189
5.2.2	A Class of Non-trivial Near-Rings Hosted by Any Group.....	189
5.3	Unital Near-Rings on S_n	190
5.4	The Quaternion Group with Order 8	190
5.4.1	Unital d.g. p.n.r. Hosted by Q_8	192
5.5	Dihedral Groups	195
5.5.1	The Dihedral Group of Order 8.....	195
5.5.2	Other Finite Dihedral Groups.....	202
5.5.3	Pre-Near-Rings.....	204
5.5.4	The Infinite Dihedral Group	204
5.6	Finite Groups from the Krimmel Class.....	206
5.6.1	A Classification Theorem Reported in Gorenstein	207
5.7	Generalised Quaternion Groups	207
5.8	Dicyclic Groups	208
5.9	Finite Hamiltonian Groups	208
5.10	Semi-dihedral Groups	209
5.11	Gorenstein's Group $M_m(p)$	209
5.12	Central Products	209
5.13	Free Products	209
5.14	Finite Non-solvable Groups	210
5.14.1	Groups with Order 360	211
5.14.2	Groups with Order 600	212
5.14.3	Groups with Order 720	212
5.14.4	Remaining Possibilities with Order 720	213
5.14.5	Direct Sums of Simple Groups	213
6	Near-Rings Hosted by p-Groups and Related Groups	215
6.1	Groups with Order p	216
6.2	The Klein Group	217
6.3	Groups with Order $2p$ ($p > 2$)	217
6.4	Groups with Order pq Where p and q Are Prime and ($p < q$)....	217

6.5	Groups with Order p^2	217
6.6	Groups with Order $2p^2$ ($p > 2$)	217
6.7	Groups with Order p^3 ($p > 2$).....	219
6.8	Groups with Order $2p^3$ or Order $2p^4$ ($p > 2$)	223
6.9	Groups with Order p^4 ($p > 2$).....	224
6.10	The Prüfer Groups.....	224
6.11	A Research Suggestion.....	226

Part III Representations and Cohomology

7	Transformation Near-Rings	231
7.1	Introduction.....	231
7.2	Preliminaries.....	232
7.2.1	Mapping Notation.....	233
7.2.2	Ideals of $T(N)$	233
7.2.3	Automorphisms of $T(N)$	234
7.2.4	The Finite Topology	235
7.2.5	Sub-near-Rings	236
7.2.6	$E(N)$, $I(N)$, $A(N)$, $\mathfrak{B}(N)$, and $\text{Phom}(N)$	237
7.3	Multiplicative Structure	242
7.3.1	Sideals and Cleiks.....	245
7.3.2	\mathcal{A}-Matrices	250
7.3.3	Operating on $\Delta^{(a,b)}$	252
7.3.4	Left and Right Sideals	253
7.3.5	Nilpotence	254
7.3.6	Idempotence	255
7.3.7	$T_0(N)$ Generalised	256
7.3.8	A Sub-near-Ring of $T_0(S_3)$	258
7.4	$\mathfrak{T}(N)$, $\mathfrak{H}(N)$ and $\mathfrak{B}(N)$	261
7.4.1	The Structure of $\mathfrak{H}(N)$	261
7.4.2	The Structure of $\mathfrak{T}(N)$	264
7.4.3	More on the Representation	265
7.4.4	Permutations and Additive Isomorphisms	268
7.4.5	Automorphisms of $T_0(N)$	269
7.4.6	The Structure of $\mathfrak{B}(N)$	271
7.4.7	Further Investigation	275
7.5	Some Examples	275
7.5.1	The Cyclic Group C_3	275
7.5.2	Finite Dihedral Groups.....	276
7.5.3	D_n when n Is Odd.....	277
7.5.4	D_n when n Is Even	281
7.5.5	D_∞ and $\mathfrak{A}(D_\infty)$	288
7.5.6	Q_8	290

7.6	Additive Structure	294
7.6.1	$\mathfrak{M}(\mathbf{N})$	294
7.6.2	Centraliser Near-Rings	295
7.6.3	A Duality of Semi-Groups	297
7.6.4	Density	299
7.7	$\mathfrak{M}_S(\Gamma)$ when S Is Fixed-Point-Free	299
7.7.1	The Structure of Minimal Left Ideals	305
7.7.2	Right Near-Ring Groups	307
7.7.3	Annihilators	310
7.7.4	Chains of Left Ideals	310
7.7.5	Simple Near-Rings	311
7.7.6	Left Ideals	312
7.7.7	Modular Left Ideals	314
8	Generalisations and Sub-near-Rings of Transformation	
	Near-Rings	315
8.1	Commutators	315
8.2	More Sub-near-Rings	318
8.2.1	Special Cases	318
8.3	Hadamard Products	320
8.4	Endomorphism Near-Rings	321
8.4.1	Related Sub-near-Rings	322
8.4.2	Sequences of Endomorphism Near-Rings	322
8.5	Other Kinds of Endomorphism Near-Ring	323
8.6	Change of Groups	324
8.6.1	Near-Loops	324
8.6.2	Homomorphisms and Normal Sub-Loops	327
8.6.3	The Host Problem	329
8.6.4	Transformations on Near-Loops	330
8.6.5	Transformations on Sets	331
8.7	The Stemhome Near-Ring	332
8.7.1	The Stemhome Functor	333
8.8	The Wurzel	334
8.9	Elementary Closure Procedures	335
8.9.1	Additive and Multiplicative Closures	335
8.9.2	A Topological Closure	336
8.10	Polynomials	338
8.10.1	Near-Rings	339
8.10.2	Skew Polynomial Near-Rings	339
9	Phomomorphisms	341
9.1	General Theory	343
9.1.1	Extending Mappings to Phomomorphisms	346
9.1.2	Phomomorphism-Invariant Subgroups	346

9.2	Cohomology Groups	347
9.2.1	Non-abelian Group Cohomology	350
9.2.2	Cochain Symmetries	352
10	Specific Examples	355
10.1	The Group $\mathbf{B}^2(\mathbb{Z}_3, \mathbb{Q}_8)$	356
10.2	Phom (\mathbb{Q}_8)	360
10.3	Phom (S_3)	363
10.4	Phom (D_4)	364
10.5	Phom $(\mathbb{Z}_2, [\mathbf{A}_4, \mathbf{A}_4])$	366
 Part IV Some Traditional Constructions		
11	Modules	369
11.1	Introduction	369
11.2	Basics	370
11.2.1	Sub-structures	373
11.3	Primitivity: Laxton's Paper	376
11.4	Primitive Near-Rings	379
11.4.1	$I(\mathbb{N}), A(\mathbb{N})$ and $E(\mathbb{N})$	383
11.4.2	The Density Theorem	383
11.4.3	Unital, 2-Primitive Non-rings	385
11.4.4	Left Ideal Cores	386
11.4.5	A Famous Result of Fröhlich	387
11.4.6	Near-Fields	387
11.4.7	$\mathfrak{M}_S(\Gamma)$	388
11.4.8	Alternative Generalisations	388
11.5	Module-Like Structures	389
11.6	\mathcal{A} -Matrices	391
11.6.1	Left Near-Ring Groups	391
11.6.2	Right Near-Ring Groups	392
11.6.3	Opposites	392
11.6.4	Bimodals	393
11.6.5	Kronecker Products	395
11.6.6	Applications to Bimodal Near-Ring Groups	396
11.6.7	Multiple Near-Ring Groups	398
12	Radicals	401
12.1	Abstract Radicals	402
12.1.1	General Radicals	402
12.1.2	Divinsky's Definition	403
12.1.3	Hoehnke Radicals	403
12.2	Rings and Modules	404
12.2.1	The Köthe Radical	404
12.2.2	The Jacobson Radical for Rings	404
12.2.3	Chain Conditions in Rings	407

12.3	Near-Rings.....	407
12.3.1	Radical Maps	407
12.3.2	Near-Ring Radicals	408
12.3.3	Chain Conditions in Near-Rings	410
12.3.4	The Ring Radical.....	412
12.3.5	The Nil Radical.....	412
12.3.6	The Prime Radical	412
12.3.7	Prime Ideals in Ring Theory	413
12.3.8	Further Work	413
12.4	The Trouble with Generalisations	414
13	Matrices.....	417
13.1	The Work of Meldrum and van der Walt	418
14	F-Near-Rings	419
14.1	The Pseudo-Centre	420
14.2	Ideals	421
14.3	F-Stems	421
Part V Product Theory		
15	Product Theory	425
15.1	General Case.....	425
15.2	The Stem $(N, +, \star)$	427
15.3	Additive and Multiplicative Splitting.....	429
15.4	A Particular Situation	430
15.4.1	The Stemhome	432
15.4.2	Associative and Distributive Elements	434
15.4.3	Opposites	435
15.4.4	Coupling	436
15.4.5	Further Symmetries	437
15.4.6	Isomorphisms	440
15.4.7	Isotopies	442
15.5	Restricted Co-domains	443
15.5.1	Bi-F-Stems	444
15.6	Abelian Groups.....	444
15.7	General Groups.....	445
16	Product Theory on Finite Elementary Abelian Groups	447
16.1	Finite Elementary Abelian p -Groups	447
16.1.1	Matrix Representations	448
16.1.2	The Cayley-Hamilton Theorem	448
16.1.3	Restricted Transposes	449
16.1.4	Notational Laxity.....	449
16.1.5	Identities	449
16.1.6	The Klein Group	452
16.1.7	Subfields	455

16.2	Finite Near-Fields	455
16.3	Near-Fields Hosted by $(C_p \oplus C_p)$	457
16.3.1	Non-central Cases (the Fantastic Four)	457
16.4	The Near-Field with Order 9	460
16.5	Finite Division Rings	461
16.6	Near-Fields Hosted by $(C_p \oplus C_p)$ with $p > 3$	462
16.7	The Fantastic Four	468
16.7.1	The Condition $\pi^s = \pi^{r^s}$	470
16.7.2	The Subgroup \mathcal{M}^*	472
16.7.3	Determinants for the Fantastic Four	473
16.8	Eigenvalues	474
16.9	Apologia	476
A	Isotopy	477
A.1	Introduction	477
A.1.1	Additive Conjoints and Near-Rings	478
A.1.2	Multiplicative Conjoints and Opposites	479
A.1.3	Isotopy	480
A.1.4	Isomorphs Which Are Not Allotropes	482
A.1.5	Basic Results in Isotopy	482
A.1.6	Alleles	485
A.2	\mathcal{A} -Matrices	485
A.2.1	Matrix Symmetries	487
A.2.2	Listing Classes of Products	489
A.2.3	Associativity	492
B	Near-Ring Products on D_4	497
B.1	Seven Non-isomorphic Left Near-Rings Hosted by D_4	497
B.2	Additive Conjoints	500
C	Other Structures of Interest	505
C.1	Some Related Algebras	505
C.1.1	Semi-Rings	505
C.1.2	Planar Ternary Rings	506
C.1.3	Alternative Division Rings	507
C.1.4	Semi-Fields	507
C.1.5	Neo-fields	508
C.1.6	Quasi-Fields	508
C.1.7	Quasi-Groups and Loops	509
C.1.8	Near-Domains	509
C.1.9	L-R Systems	509
C.1.10	Other Structures and Structural Coding	509
C.2	Some Geometry	510
C.2.1	Projective Spaces	510
C.2.2	Finite Projective Planes	512

D	Semi-Linear Mappings	517
E	Zsigmondy's Theorem	519
	Bibliography	523
	Index	529
