<i>List of tables</i>	xv
<i>Preface</i>	xvi
Chapter 1: What is IBOY	1
1.1 Mission for IBOY-DIWPA	1
1.1.1 What is IBOY-DIWPA?	1
1.1.2 What are the goals of IBOY-DIWPA?	1
1.1.3 Strategy for implementing IBOY-DIWPA	5
1.1.4 Integrated approaches to biodiversity assessment and capacity building	5
1.1.5 Study sites	7
1.1.6 Selection of target organisms	7
1.2 Mission for biodiversity assessment	9
1.2.1 Why is biodiversity assessment essential?	9
1.2.2 How frequently and where should biodiversity assessments be made?	12
1.2.3 At what biodiversity level should assessments be made?	12
<i>At the genetic level</i>	12
<i>At the population level</i>	14
<i>At the species level</i>	15
<i>Species turnover in ecosystems</i>	16
<i>At the ecosystem and landscape levels</i>	17
1.2.4 The rationale for inventorying and monitoring inside and outside protected areas	18
<i>Status of identified features in protected areas</i>	19
<i>Threats to protected areas</i>	19
<i>Use and socio-economic benefits of protected areas</i>	20
<i>Inventorying and monitoring outside protected areas</i>	20
1.2.5 Scales, planning and approaches to inventorying and monitoring	21
References	23
Chapter 2: Forest Ecosystems	27
2.1 Introduction	27
2.1.1 Forest ecosystems and IBOY	27

2.1.2 Secondary transects	28
2.1.3 General rationale and the goals of surveys	28
2.1.4 Core and satellite sites	30
2.2 Selection and establishment of observation sites	32
2.2.1 Site selection	32
<i>Accessibility</i>	32
<i>Adjacency to laboratory facilities</i>	33
<i>Environmental uniformity</i>	33
<i>Topography</i>	33
2.2.2 Plot establishment	33
2.3 Environmental variables	36
2.3.1 Meteorological data	36
2.3.2 Light environment	36
2.4 Plant diversity	38
2.4.1 Tall-trees	38
<i>Targets</i>	38
<i>Parameters of forest dynamics</i>	38
<i>Diversity</i>	39
2.4.2 Other components	39
<i>Targets</i>	39
<i>Diversity</i>	39
2.4.3 Litter supply and decomposition rate	39
<i>Supply</i>	39
<i>Accumulation</i>	42
<i>Rate of decomposition</i>	42
2.4.4 Phenology	42
2.5 Animal diversity: arthropods	42
2.5.1 General trapping methods	43
<i>Light traps</i>	43
<i>Malaise traps</i>	48
<i>Window traps</i>	52
<i>Canopy knockdown</i>	53
<i>Bark spraying</i>	58
<i>Pitfall traps</i>	59
<i>Leaf litter sampling</i>	63
<i>Soil sampling</i>	65
2.5.2 Surveys of selected taxa	67
<i>Drosophilidae</i>	67
<i>Lepidoptera</i>	69

<i>Spiders</i>	73
<i>Ants</i>	75
<i>Termites</i>	80
2.5.3 Handling, identification, storage and data management for arthropod surveys	87
<i>Sorting and identification</i>	89
<i>Storage</i>	91
<i>Data storage and handling</i>	91
<i>Backups</i>	92
2.6 Animal diversity: vertebrates	92
2.6.1 Amphibians	94
<i>Pitfall and fence trapping</i>	94
2.6.2 Reptiles	94
<i>Pitfall and fence trapping</i>	94
2.6.3 Birds	94
<i>Transect counts</i>	94
2.6.4 Mammals	97
<i>Trapping for small mammals</i>	97
<i>Traps</i>	97
<i>Grid lay-out</i>	98
<i>Bait</i>	98
<i>Pre-baiting</i>	98
<i>Trapping</i>	98
<i>Handling of small mammals</i>	98
<i>Data handling and storage</i>	99
<i>Identification of vertebrates</i>	99
References	101
Appendix: Sample Arthropod Tally Sheet	108
Drafting team	109
Authors of sections	109
 Chapter 3: Freshwater Ecosystems	 111
3.1 General Strategy	111
3.1.1 Endangered freshwater ecosystems	111
3.1.2 Biodiversity investigation in freshwater ecosystems	112
3.2 Unique framework for the IBOY-DIWPA	113
3.2.1 Freshwater environments	113
<i>Lakes</i>	114
<i>Rivers and streams</i>	115

3.2.2 Target organisms	115
<i>Fish</i>	115
<i>Benthic organisms</i>	116
<i>Planktonic organisms</i>	117
3.3 Field and laboratory methods and data management	117
3.3.1 Bottom types and site selection for the littoral bottom survey	117
3.3.2 Water depth	117
3.3.3 Transect line	118
3.3.4 Physical structure and underwater landscape	119
3.3.5 Water column survey	119
3.3.6 Physico-chemical variables	120
3.3.7 Data from meteorological stations and remote sensing	120
3.3.8 Basic unit for field investigation	121
<i>Research vessel</i>	121
<i>Scuba divers</i>	122
3.3.9 Data management	122
3.4. Biodiversity survey for each organism	124
3.4.1 Fish	124
<i>Field Sampling</i>	124
<i>Field treatment</i>	129
<i>Laboratory procedures</i>	132
<i>Identification</i>	133
<i>Counts, measurement and ecological data</i>	133
3.4.2 Macrobenthos and macrophytes	136
<i>Field methods</i>	136
<i>Quadrat and mesh size</i>	137
<i>Underwater handling</i>	139
<i>Stone unit sampling for loose stones</i>	142
<i>Treatment of samples in the field</i>	143
<i>Laboratory methods</i>	146
3.4.3 Meiobenthos	147
<i>Field methods</i>	147
<i>Laboratory methods</i>	148
3.4.4 Epi-microphyte (attached algae)	149
<i>Field Methods</i>	149
<i>Laboratory methods</i>	150
3.4.5 Planktonic organisms	150

<i>Sampling from the water column</i>	150
<i>Collection and treatment of zooplankton</i>	151
<i>Collection and treatment of water sample, micro-, protozoo-, and phytoplankton</i>	152
<i>Treatment of bacteria</i>	153
<i>Treatment of algal picoplankton (APP)</i>	154
<i>Treatment of heterotrophic nanoflagellates (HNF)</i>	155
<i>Treatment of ciliates</i>	156
<i>Treatment of nano- and micro-phytoplankton</i>	156
3.5 Examples of observation sites	156
3.5.1 Clear lakes	156
3.5.2 Turbid lakes	157
References	158
Drafting Team	160
 Chapter 4: Latitudinal Biodiversity in Coastal Macrophyte Communities	 162
4.1 Introduction	162
4.1.1 Importance of habitats	162
4.1.2 Importance of monitoring	163
4.1.3 Baseline studies	164
4.2 Goals for Monitoring Coastal Ecosystems	164
4.2.1 Latitudinal and related gradients	165
4.2.2 Long-term monitoring	165
4.3 Site Selection	165
4.3.1 Regional level	165
4.3.2 Local selection criteria	166
<i>Infrastructure</i>	167
<i>Baseline information</i>	167
<i>Reasonably natural environment</i>	167
<i>Long-term stability of the site</i>	167
<i>Accessibility</i>	168
<i>Biological character</i>	168
4.3.3 Application of selection criteria	168
4.3.4 Potential availability of no-fishing/no-take areas for stability of long-term monitoring	168
4.3.5 Marine BioRap – Identifying biodiversity priority areas	168
4.4 Sampling Protocol	169

Biodiversity Research Methods

4.4.1 Sampling strategy	169
4.4.2 Sampling methodology	169
<i>In-situ observation (non-destructive)</i>	169
<i>Direct removal (destructive)</i>	170
4.4.3 Initial processing of direct samples	170
4.4.4 Recommendations	170
4.5 Subjects To be Studied and Monitored	171
4.5.1 Species inventory of selected taxonomic groups	171
4.5.2 Abiotic and biotic parameters	172
4.5.3 Habitat and biodiversity mapping	172
4.5.4 Species inventory and sampling	173
4.5.5 All-biota taxonomic inventory	173
4.6 Strategies for future activities	174
4.6.1 Sampling kit	174
4.6.2 Future activities	174
References	175
Appendix 1: Global 200 marine ecoregions occurring within the DIWPA region	176
Marine ecoregions:	176
<i>Large deltas, mangroves, and estuaries</i>	176
<i>Coral reef and associated marine ecosystems</i>	176
<i>Coastal marine ecosystems</i>	177
<i>Polar and subpolar marine ecosystems</i>	177
Appendix 2: Questionare form and invitational letter to be distributed at potential participating sites	177
DIWPA IBOY core or satellite site questionnaire form	180
Appendix 3: List of acronyms	181
Drafting Team	182

Chapter 5: Research Methods to Initiate PABITRA: The Island Ecosystem Branch of DIWPA	183
5.1 Introduction	183
5.2 The DIWPA/PABITRA Relationship	184
5.3 Underlying Theories for PABITRA	186
5.4 Geoecology and Environmental Gradients	190
5.5 Comparative Sampling of Upland Forests	190
5.6 Sampling of Upland forests to Coastal Habitats	194
5.7 Survey of Selected Taxa: The Hawai'i IBP Example	195

5.8 Assessing Biodiversity Functions: Another Example from the Hawai‘i IBP	199
5.8.1 Sampling protocol of a large (80 ha) forest plot	199
5.8.2 Application of the guild concept	202
5.8.3 Assessment of forest dynamics patterns	202
5.9 PABITRA Scope for IBOY 2001	204
References	206
