Introduction	11
Part 1 Theory	
1 Dexterity	23
1.1 The body and the environment	23
1.2 Dexterity and body-intrinsic movement	26
1.2.1 Dynamics and self-protection	26
1.2.2 The changeable organism	27
1.3 Dexterity and environment-intrinsic nature of the movement	31
1.4 Interaction between body-intrinsic and environment-intrinsic movement	35
1.4.1 The bandwidth of movement	35
1.4.2 The problem of degrees of freedom	36
1.4.3 Degrees of constraint	36
1.4.4 Synergies	37
1.4.5 Only bottom-up?	41
1.5 Summary	42
2 Agility	43
2.1 Introduction	43
2.2 Constraints-led approach	44
2.3 Agility and constraints	50
2.4 Limits to agility in the organism	51
2.4.1 Limits to central control	51
2.4.3 Limits to the runner's anatomy	75
2.5 Limits to the task and environment in agility	81
2.5.1 The task and agility	81
2.5.2 The environment and agility	81
2.6 Summary	84

3	Control of agility	87
3.1	Introduction	87
3.2	Dimensions of specificity	89
3.2.1	The motor dimension	89
3.2.2	The sensory dimension	95
3.2.3	The dimension of dominant metabolic loading	98
3.2.4	The dominant control dimension	99
3.2.5	The intention dimension	101
3.3	Cognitive and self-organizing influences in agility	105
3.3.1	Peripheral self-organization in relation to central control	107
3.3.2	Central control from the perspective of peripheral self-organization	112
3.3.3	Force landscapes in agility: an example	115
3.4	Summary	118

Part 2 Practice

4	Self-organization in agility	123
4.1	Introduction	123
4.2	Rules for finding attractors	126
4.2.1	Rule: if there is pressure of time	126
4.2.2	Rule: if there are large opposing forces	129
4.2.3	Rule: if the direction of forces changes greatly	130
4.2.4	Rule: round at-risk structures	131
4.2.5	Rule: round great changes in muscle activity	132
4.2.6	Rule: in reflex patterns	132
4.2.7	Rule: at end points	136
4.3	Good and bad attractors in the running movement	137
4.3.1	Active and passive attractors	139
4.3.2	Attractors in the ankle	141
4.3.3	Attractors round the pelvis	142
4.3.4	Classification of attractors	142
4.4	Summary	144
5	Attractors in agility	147
5.1	Introduction	147
5.2	Self-stabilization from small to large	151
5.2.1	Self-stabilization at intramuscular level	151
5.2.2	Self-stabilization at intermuscular level	169
5.3	Summary	226

6	Analysis of movement	235
6.1	Introduction	235
6.2	Observation and analysis	236
6.3	The approach	238
6.4	The picture series	241
6.5	Summary	311
7	Motor learning and the context of agility	313
7.1	Introduction	313
7.2	Components of a powerful learning environment	314
7.2.1	Sensory function as a basis	314
7.2.2	Filters of sensory function and learning	315
7.2.3	The CLA in detail	323
7.3	Summary	329
	List of terms	331
	References	345
	List of keywords	361
