PREFACE	<i>xi</i>
RECOMMENDED READING	<i>xiii</i>

<b>Overview</b>	<b>1</b>
-----------------	----------

## **PART A GENERAL INFORMATION MODEL**

Introduction	5
--------------	---

### **Chapter 1 Basic Concepts**

1. Introduction	8
2. Diameter and Radius of General Information	9
3. Complexity of General Information	17
4. The Scope of Analytic Computational Complexity	22

### **Chapter 2 Theory of Linear Information**

1. Introduction	25
2. Cardinality of Linear Information	27
3. Index of a Linear Problem	29

\*Chapter 4 of Part A was written jointly with G. W. Wasilkowski, University of Warsaw. Sections 4–8 of Part B were written jointly with B. Kacewicz, University of Warsaw.

4. Optimal Linear Information Operators 33
5. Convergence and Minimal Subspaces for a Hilbert Case 38
6. Relations to Gelfand  $n$ -Widths 41
7. Adaptive Linear Information 47

### Chapter 3 Linear Algorithms for Linear Problems

1. Introduction 51
2. Preliminaries 52
3. Linear Optimal Error Algorithms for Linear Functionals 54
4. Linear Algorithms for Linear Operators 60
5. Optimal Linear Algorithms and Linear Kolmogorov  $n$ -Widths 64

### Chapter 4 Spline Algorithms for Linear Problems

1. Introduction 68
2. Deviation 70
3. Splines 71
4. Spline Algorithms 72
5. Hilbert Case 75
6. Non-Hilbert Case 77
7. Summary 81

### Chapter 5 Complexity for the Linear Case

1. Introduction 82
2. Complexity of Linear Information 82

### Chapter 6 Applications for Linear Problems

1. Introduction 89
2. Linear Functionals 91
3. Interpolation 99
4. Integration 107
5. Approximation 121
6. Linear Partial Differential Equations 132
7. Summary and Open Problems 146

### Chapter 7 Theory of Nonlinear Information

1. Introduction 150
2. Cardinality of Nonlinear Information 151
3. Optimal Nonlinear Information 153
4. Relations to Kolmogorov  $n$ -Widths and Entropy 157

### Chapter 8 Applications for Nonlinear Problems

1. Introduction 163
2. Optimal Nonadaptive Linear Information for Nonlinear Scalar Equations 165
3. Adaptive Linear Information for Nonlinear Scalar Equations 168
4. Nonlinear Information for Nonlinear Scalar Equations 170

5. Multivariate and Abstract Nonlinear Equations 173
6. Nearly Optimal Nonadaptive Linear Information for the Search for the Maximum of Unimodal Functions 176
7. Adaptive Linear Information for the Search for the Maximum of Unimodal Functions 179

## Chapter 9 Complexity Hierarchy

1. Introduction 185
2. Basic Definitions 185
3. Complexity Hierarchy for Class  $\Psi_f^{\text{non}}$  187
4. Complexity Hierarchy for Class  $\Psi_f^*$  189
5. Complexity Hierarchy for Class  $\Psi_L^{\text{non}}$  190
6. Complexity Hierarchy for Class  $\Psi_L^*$  191
7. Complexity Hierarchy for Class  $\Psi_{\text{NON}}$  192
8. Complexity Hierarchy for a Fixed Problem  $S$  192
9. Summary 193

## Chapter 10 Different Models of Analytic Complexity

1. Introduction 195
2. Average Case Model 195
3. Relative Model 196
4. Perturbed Model 198
5. Asymptotic Model 199

**Bibliography** 203

**Glossary** 218

## PART B ITERATIVE INFORMATION MODEL

1. Introduction 223
  2. Diameter and Order of Information 227
  3. Complexity of General Information 234
  4. Cardinality of Linear Information 239
  5. When Is the Class of Iterative Algorithms Empty? 242
  6. Index of the Problem  $S$  245
  7. The  $m$ th Order Iterations 249
  8. Complexity Index for Iterative Linear Information 253
  9. Information Operator with Memory 257
  10. Extensions and Open Problems 264
  11. Comparison of Results from General and Iterative Information Models 268
- Appendix 269

**Bibliography** 272

**Glossary** 275

**PART C BRIEF HISTORY  
AND ANNOTATED BIBLIOGRAPHY**

1. Introduction 277
2. Brief History 278
3. Annotated Bibliography 281
