

# Contents

<b>1</b>	<b>Basics</b> .....	1
1.1	Introduction; notation .....	1
1.2	The Cauchy–Riemann equations and Cauchy’s integral theorem .....	2
1.3	The Cauchy integral formula and applications .....	4
1.4	Change of contour, isolated singularities, residues .....	7
1.5	The logarithm and powers .....	10
1.6	Infinite products .....	12
1.7	Reflection principles .....	13
1.8	Analytic continuation .....	14
1.9	Harmonic functions .....	15
	Remarks and further reading .....	16
<b>2</b>	<b>Further preliminaries</b> .....	17
2.1	Linear fractional transformations .....	18
2.2	Geometries .....	21
2.3	Normal families .....	25
2.4	Conformal equivalence and the Riemann mapping theorem .....	28
2.5	The triply-punctured sphere, Montel, and Picard .....	30
2.6	Jordan domains and Carathéodory’s extension theorem .....	33
2.7	Hilbert spaces .....	35
2.8	$L^p$ spaces and measure .....	38
2.9	Convolution, approximation, and weak solutions .....	40
2.10	The gamma function .....	44
	Remarks and further reading .....	45
<b>3</b>	<b>Complex dynamics</b> .....	47
3.1	Fatou sets and Julia sets; some examples .....	49
3.2	Julia sets: invariance, density, and self-similarity .....	53
3.3	Fixed points and periodic points .....	56
3.4	Attracting, super-attracting, and repelling fixed points .....	57
3.5	Neutral fixed points .....	62

3.6	Parabolic fixed points	68
3.7	Perspectives: classification and the Mandelbrot set	72
	Exercises	75
	Remarks and further reading	78
<b>4</b>	<b>Univalent functions and de Branges's theorem</b>	79
4.1	Bieberbach's theorem and some consequences	81
4.2	The Bieberbach conjecture: history and strategy	86
4.3	The Carathéodory convergence theorem	87
4.4	Slit mappings and Loewner's equation	90
4.5	The Robertson and Milin conjectures	95
4.6	Preparation for the proof of de Branges's theorem	98
4.7	Proof of de Branges's Theorem	102
	Exercises	110
	Remarks and further reading	111
<b>5</b>	<b>Harmonic and subharmonic functions; the Dirichlet problem</b>	113
5.1	Harmonic functions and the Poisson integral formula	113
5.2	Harnack's principle; removable singularities	117
5.3	Subharmonic functions and Perron's principle	118
5.4	Regular points and the solution of the Dirichlet problem	120
5.5	The $L^2$ approach to the Dirichlet problem	122
	Exercises	123
	Remarks and further reading	124
<b>6</b>	<b>General Riemann surfaces</b>	125
6.1	Abstract Riemann surfaces	126
6.2	The universal cover	127
6.3	Automorphism groups and cover transformations	132
	Exercises	134
	Remarks and further reading	135
<b>7</b>	<b>The uniformization theorem</b>	137
7.1	Green's functions and harmonic measure	138
7.2	Uniformization: the hyperbolic case	141
7.3	An analogue of the Green's function	143
7.4	Proof of the uniformization theorem, completed	148
	Exercises	150
	Remarks and further reading	152
<b>8</b>	<b>Quasiconformal mapping</b>	153
8.1	Quadrilaterals	154
8.2	Quasiconformal mappings	157
8.3	Regular quasiconformal maps	160
8.4	Ring domains	163
8.5	Extremal ring domains	166
8.6	Distortion properties and Hölder continuity	174

8.7	Quasisymmetry and quasi-isometry .....	177
8.8	Complex dilatation; the Beltrami equation .....	182
8.9	The Calderón–Zygmund inequality .....	190
	Exercises .....	195
	Remarks and further reading .....	199
<b>9</b>	<b>Introduction to Teichmüller theory</b> .....	<b>201</b>
9.1	Coverings, quotients, and moduli of compact Riemann surfaces .....	203
9.2	Homeomorphisms of Riemann surfaces .....	207
9.3	Homeomorphisms of compact Riemann surfaces .....	209
9.4	The Teichmüller space of a Riemann surface .....	214
9.5	The universal Teichmüller space .....	217
9.6	The Bers embedding .....	221
9.7	Further developments .....	227
9.8	Higher Teichmüller theory .....	228
	Exercises .....	229
	Remarks and further reading .....	230
<b>10</b>	<b>The Bergman kernel</b> .....	<b>233</b>
10.1	The reproducing kernel .....	234
10.2	Orthonormal bases .....	238
10.3	Conformal mapping, I .....	240
10.4	Conformal invariance and the Bergman metric .....	242
10.5	Conformal mapping, II .....	245
10.6	The kernel function and partial differential equations .....	253
	Exercises .....	257
	Remarks and further reading .....	261
<b>11</b>	<b>Theta functions</b> .....	<b>263</b>
11.1	Hyperelliptic curves .....	264
11.2	Cycles and differentials .....	265
11.3	Theta functions and Abel's theorem .....	272
11.4	Jacobi inversion .....	275
	Exercises .....	281
	Remarks and further reading .....	282
<b>12</b>	<b>Padé approximants and continued fractions</b> .....	<b>283</b>
12.1	Padé approximants and Taylor series .....	284
12.2	Padé approximation and continued fractions .....	287
12.3	Another view of Padé approximants and continued fractions .....	292
12.4	The Stieltjes transform, Padé approximants, and orthogonal polynomials .....	296
12.5	Characterization of Stieltjes transforms .....	300
12.6	Stieltjes functions and Padé approximants .....	303
12.7	Generalized Shanks Transformation .....	307
12.8	Examples .....	309

12.9	Continued fraction expansions of $e^x$ .....	314
	Exercises .....	316
	Remarks and further reading .....	317
<b>13</b>	<b>Riemann–Hilbert problems</b> .....	<b>319</b>
13.1	The Sokhotski–Plemelj formula .....	320
13.2	Riemann–Hilbert Problems .....	328
13.3	The Radon Transform and the Fourier transform .....	331
13.4	Integral Equations with Cauchy Kernels .....	337
13.5	Integral Equations with Algebraic Kernels .....	339
13.6	Integral Equations with Logarithmic Kernels .....	341
13.7	Singular Integral Equations .....	344
13.8	The other Riemann–Hilbert problem .....	348
	Exercises .....	349
	Remarks and further reading .....	352
<b>14</b>	<b>Asymptotics and Darboux’s method</b> .....	<b>353</b>
14.1	Algebraic singularities .....	354
14.2	Logarithmic singularities .....	358
14.3	Two coalescing singularities .....	366
14.4	Asymptotic nature of the expansion (14.3.24) .....	371
14.5	Heisenberg polynomials .....	384
	Exercises .....	387
	Remarks and further reading .....	389
	<b>References</b> .....	<b>391</b>
	<b>Index</b> .....	<b>399</b>
