Part I

1	Introduction	3
	References	6
2	Reinforcements	7
2.1	Introduction	7
2.1.1	Flexibility	8
2.1.2	Fiber Spinning Processes	10
2.1.3	Stretching and Orientation	11
2.2	Glass Fibers	11
2.2.1	Fabrication	12
2.2.2	Structure	15
2.2.3	Properties and Applications	15
2.3	Basalt Fibers	16
2.4	Boron Fibers	17
2.4.1	Fabrication	18
2.4.2	Structure and Morphology	20
2.4.3	Residual Stresses	22
2.4.4	Fracture Characteristics	22
2.4.5	Properties and Applications of Boron Fibers	23
2.5	Carbon Fibers	25
2.5.1	Processing	27
2.5.2	Structural Changes Occurring During Processing	32
2.5.3	Properties and Applications	33
2.6	Organic Fibers	37
2.6.1	Oriented Polyethylene Fibers	39
2.6.2	Aramid Fibers	42

2.7	Ceramic Fibers	52
2.7.1	Oxide Fibers	52
2.7.2	Nonoxide Fibers	57
2.8	Whiskers	64
2.8.1	Other Nonoxide Fibers	67
2.8.2	Silicon Carbide in a Particulate Form	68
2.9	Effect of High Temperature Exposure on the Strength of Ceramic Fibers	68
2.10	Comparison of Fibers	69
	References	71
3	Matrix Materials	75
3.1	Polymers	75
3.1.1	Glass Transition Temperature	77
3.1.2	Thermoplastics and Thermosets	78
3.1.3	Copolymers	79
3.1.4	Molecular Weight	79
3.1.5	Degree of Crystallinity	80
3.1.6	Stress–Strain Behavior	80
3.1.7	Thermal Expansion	82
3.1.8	Fire Resistance or Flammability	82
3.1.9	Common Polymeric Matrix Materials	82
3.2	Metals	93
3.2.1	Structure	93
3.2.2	Conventional Strengthening Methods	96
3.2.3	Properties of Metals	98
3.2.4	Why Fiber Reinforcement of Metals?	98
3.3	Ceramic Matrix Materials	100
3.3.1	Bonding and Structure	100
3.3.2	Effect of Flaws on Strength	102
3.3.3	Common Ceramic Matrix Materials	103
	References	104
4	Interfaces	107
4.1	Wettability	108
4.1.1	Effect of Surface Roughness	111
4.2	Crystallographic Nature of Interface	113
4.3	Interactions at the Interface	114
4.4	Types of Bonding at the Interface	116
4.4.1	Mechanical Bonding	116
4.4.2	Physical Bonding	118
4.4.3	Chemical Bonding	119

4.5	Optimum Interfacial Bond Strength	121
4.5.1	Very Weak Interface or Fiber Bundle (No Matrix)	121
4.5.2	Very Strong Interface	121
4.5.3	Optimum Interfacial Bond Strength	121
4.6	Tests for Measuring Interfacial Strength	122
4.6.1	Flexural Tests	122
4.6.2	Single Fiber Pullout Tests	125
4.6.3	Curved Neck Specimen Test	128
4.6.4	Instrumented Indentation Tests	128
4.6.5	Fragmentation Test	131
4.6.6	Laser Spallation Technique	133
	References	135

5	Polymer Matrix Composites	139
5.1	Processing of PMCs	139
5.1.1	Processing of Thermoset Matrix Composites	140
5.1.2	Thermoplastic Matrix Composites	150
5.1.3	Sheet Molding Compound (SMC)	156
5.1.4	Carbon Fiber Reinforced Polymer Composites	156
5.2	Interface in PMCs	157
5.2.1	Glass Fiber/Polymer	157
5.2.2	Carbon Fiber/Polymer Interface	160
5.2.3	Aramid Fiber/Polymer Interface	165
5.2.4	Polyethylene Fiber/Polymer Interface	165
5.3	Structure and Properties of PMCs	166
5.3.1	Structural Defects in PMCs	166
5.3.2	Mechanical Properties	167
5.4	Applications	178
5.4.1	Pressure Vessels	179
	References	197
6	Metal Matrix Composites	199
6.1	Types of Metal Matrix Composites	199
6.2	Important Metallic Matrices	201
6.2.1	Aluminum Alloys	201
6.2.2	Titanium Alloys	201
6.2.3	Magnesium Alloys	202
6.2.4	Copper	202
6.2.5	Intermetallic Compounds	202
6.3	Processing	203
6.3.1	Liquid State Processes	203

6.3.2	Solid State Processes	211
6.3.3	In Situ Processes	214
6.4	Interface in Metal Matrix Composites	216
6.4.1	Major Discontinuities at Interfaces in MMCs	217
6.4.2	Interfacial Bonding in Metal Matrix Composites	217
6.5	Properties	226
6.5.1	Modulus	226
6.5.2	Strength	230
6.5.3	Thermal Characteristics	238
6.5.4	High temperature properties, creep, and fatigue	239
6.6	Applications	242
6.6.1	Electronic Grade MMCs	245
	References	247
7	Ceramic Matrix Composites	251
7.1	Processing of CMCs	252
7.1.1	Cold Pressing and Sintering	252
7.1.2	Hot Pressing	252
7.1.3	Reaction Bonding Processes	255
7.1.4	Infiltration	256
7.1.5	Directed Oxidation or the Lanxide™ Process	258
7.1.6	In Situ Chemical Reaction Techniques	261
7.1.7	Sol–Gel	264
7.1.8	Polymer Infiltration and Pyrolysis (PIP)	265
7.1.9	Electrophoretic Deposition	269
7.1.10	Self-propagating High-Temperature Synthesis (SHS)	270
7.1.11	GE’s Melt Infiltration Process	271
7.2	Interface in CMCs	273
7.3	Properties of CMCs	276
7.4	Toughness of CMCs	280
7.4.1	Crack Deflection at the Interface in a CMC	285
7.5	Thermal Shock Resistance	289
7.6	Applications of CMCs	290
7.6.1	Cutting Tool Inserts	291
7.6.2	Ceramic Composite Filters	292
7.6.3	Other Applications of CMCs	294
	References	295
8	Carbon Fiber/Carbon Matrix Composites	297
8.1	Processing of Carbon/Carbon Composites	298
8.1.1	High Pressure Processing	300
8.2	Oxidation Protection of Carbon/Carbon Composites	301
8.3	Properties of Carbon/Carbon Composites	304

8.3.1	Thermal Properties	305
8.3.2	Frictional Properties	305
8.3.3	Ablative Properties	305
8.4	Applications of Carbon/Carbon Composites	306
8.4.1	Carbon/Carbon Composite Brakes	307
8.5	Other Applications of Carbon/Carbon Composites	309
8.5.1	Carbon/SiC Brake Disks	310
	References	311
9	Multifilamentary Superconducting Composites	313
9.1	Introduction	313
9.1.1	The Problem of Flux Pinning	315
9.2	Types of Superconductor	317
9.3	Processing and Structure of Multifilamentary Superconductors	318
9.3.1	Niobium–Titanium Alloys	318
9.3.2	A15 Superconductors	321
9.3.3	Ceramic Superconductors	324
9.4	Applications	332
9.4.1	Magnetic Resonance Imaging	334
