

# Contents

<b>1</b>	<b>Introduction</b> .....	1
<b>Part I Asymptotic Expansions</b>		
<b>2</b>	<b>Taylor Expansions</b> .....	7
<b>3</b>	<b>Gevrey Formal Power Series</b> .....	15
3.1	Algebras of Gevrey Formal Power Series .....	16
3.2	Gevrey Formal Power Series and Partial Differential Equations...	20
3.2.1	Example: The Heat Equation .....	21
3.2.2	Homogeneous Linear Partial Differential Equations and Newton Polygon.....	29
3.2.3	A General Problem .....	32
3.2.4	Some Classical Physical Applications.....	35
<b>4</b>	<b>Gevrey Asymptotics</b> .....	41
4.1	Algebras of $s$ -Gevrey Asymptotic Functions .....	41
4.1.1	Characterization of $s$ -Gevrey Asymptotic Functions .....	43
4.1.2	Algebraic Structure of $s$ -Gevrey Asymptotic Functions.....	45
4.1.3	Gevrey Asymptotics and Change of Variable .....	50
4.2	$s$ -Gevrey Asymptotic Expansion in $\mathcal{O}(D_{\rho_1, \dots, \rho_n})[[t]]$ .....	51
4.3	Flat $s$ -Gevrey Asymptotic Functions .....	52
4.4	$s$ -Gevrey Borel-Ritt Theorem.....	55
4.5	Watson's Lemma .....	59
<b>Part II Summability</b>		
<b>5</b>	<b><math>k</math>-Summability: Definition and First Algebraic Properties</b> .....	65
<b>6</b>	<b>First Characterization of the <math>k</math>-Summability: The Successive Derivatives</b> .....	69
6.1	Some Additional Algebraic Properties .....	69

6.2	Summability and Partial Differential Equations .....	73
6.2.1	Example: The Heat Equation .....	74
6.2.2	Some More General Problems .....	83
<b>7</b>	<b>Second Characterization of the <math>k</math>-Summability: The Borel-Laplace Method .....</b>	<b>91</b>
7.1	Classical Borel and Laplace Operators .....	91
7.2	$k$ -Borel and $k$ -Laplace Operators .....	98
7.3	Nevanlinna's Theorem .....	104
7.4	Borel-Laplace Method and $k$ -Summability .....	117
7.5	Some Applications to Partial Differential Equations .....	120
7.5.1	Example: The Heat Equation .....	120
7.5.2	Some More General Problems .....	126
 <b>Part III Moment Summability</b>		
<b>8</b>	<b>Moment Functions and Moment Operators .....</b>	<b>133</b>
8.1	Kernel Functions and Moment Functions .....	133
8.2	$k$ -Moment Operators .....	139
8.2.1	$k$ -Moment-Laplace Operators .....	139
8.2.2	$k$ -Moment-Borel Operators .....	144
8.3	Convolution of Kernels .....	152
<b>9</b>	<b>Moment-Borel-Laplace Method and Summability .....</b>	<b>155</b>
9.1	Third Characterization of the $k$ -Summability: The Moment-Borel-Laplace Method .....	155
9.2	Some Applications to Partial Differential Equations .....	163
<b>10</b>	<b>Linear Moment Partial Differential Equations .....</b>	<b>167</b>
10.1	Moment Derivation.....	167
10.1.1	Some Definitions and Basic Properties .....	168
10.1.2	Integral Representation.....	174
10.1.3	Action of the Formal Moment-Borel and Laplace Operators .....	190
10.2	The General Problem.....	193
10.3	Gevrey Regularity and Summability: The Case of the Regular Moment Functions .....	196
10.3.1	Regular Moment Functions .....	196
10.3.2	Example: The $s_0$ -Regular Moment Heat Equation.....	199
10.3.3	More General Results .....	208
10.4	Gevrey Regularity and Summability: The General Case .....	210
 <b>Part IV Appendices</b>		
<b>11</b>	<b>Some Related Equations .....</b>	<b>215</b>
11.1	Integro-Differential Equations .....	215
11.2	Singular Partial Differential Equations.....	216
11.3	Generalized Moment Partial Differential Equations.....	217

<b>12</b>	<b>Nagumo Norms</b> .....	219
<b>13</b>	<b>Generalized Binomial and Multinomial Coefficients</b> .....	225
<b>14</b>	<b>Mittag-Leffler's Function</b> .....	233
	<b>Bibliography</b> .....	237
	<b>Index</b> .....	243
