

Contents

Chapter 1. Introduction	1
1.1. Modular forms and automorphic forms	1
1.2. Classical modular symbols	2
1.3. Higher dimensional modular symbols of Ash and Rudolph	2
1.4. Our result on modular symbols	3
1.5. Outline of proof for universal modular symbols	4
1.6. Outline for comparing modular symbols	6
1.7. On the structure of the space of automorphic forms	7
1.8. Remarks	7
1.9. Dictionary	10
Chapter 2. Generalized simplicial complexes and their (co)homology	11
2.1. Generalized simplicial complexes	11
2.2. Orientation	14
2.3. Cohomology and homology	15
2.4. Universal coefficient theorem	16
2.5. Some induced maps	16
2.6. Geometric realization	17
2.7. Cellular versus singular	17
Chapter 3. The Bruhat-Tits building and apartments	19
3.1. The Bruhat-Tits building of PGL_d	19
3.2. Apartments	20
3.3. The fundamental class	21
Chapter 4. Arithmetic subgroups and modular symbols	25
4.1. Arithmetic subgroups	25
4.2. p' -torsion free subgroups	28
4.3. Arithmetic quotients of the Bruhat-Tits building	29
4.4. Definition of modular symbols	30
4.5. Statement of Main Theorem	30
Chapter 5. Automorphic Forms with Steinberg at infinity	33
5.1. Automorphic forms with values in $\mathbb{C}$	33
5.2. Automorphic forms with Steinberg at infinity	34
5.3. Admissibility	36
5.4. Decompositions	36
Chapter 6. Double cosets for automorphic forms	37
6.1. Generalized simplicial complexes for automorphic forms	37
6.2. Pull-back maps for homology groups	38

6.3. Limits	39
6.4. The Steinberg representation and harmonic cochains	40
Chapter 7. Proof of Theorem 5.4.2	43
7.1. Chains of locally free $\mathcal{O}_C$ -modules	43
7.2. Some generalized subsimplicial complexes	46
7.3. Example 1	46
7.4. Example 2	47
7.5. Figures	49
7.6. The finite adèle actions	53
7.7. Finiteness and an application	55
7.8. Some isomorphisms	55
7.9. Proof of Theorem 5.4.2	56
7.10. Proof of Lemma 7.9.4	61
Chapter 8. Universal Modular Symbols	65
8.1. The Tits building for the special linear groups	65
8.2. The boundary of the first barycentric subdivision of a standard simplex	66
8.3. The universal modular symbols	67
8.4. Some results of Ash and Rudolph	67
Chapter 9. On finite p -subgroups of arithmetic subgroups	69
9.1. Lemmas	69
Chapter 10. Some spectral sequences	73
10.1. Cellular structure on some products	73
10.2. Equivariant homology	74
10.3. The Lyndon-Hochschild-Serre spectral sequence	74
10.4. Another spectral sequence	74
Chapter 11. Proof for universal modular symbols	77
11.1. Modular symbols for automorphic forms	77
11.2. Connection with the Tits building	77
11.3. The Solomon-Tits theorem	78
11.4. The Lyndon-Hochschild-Serre spectral sequence	78
11.5. The second spectral sequence	78
11.6. Corestriction and transfer	80
11.7. The Mittag-Leffler condition	81
11.8. Statements and proofs	82
11.9. The case $d = 2$	83
Chapter 12. Comparison of modular symbols	85
12.1. Statement of comparison proposition	85
12.2. Proof of Theorem 4.5.1	85
12.3. Outline of proof of Proposition 12.1.1	85
12.4. Quillen's lemma	87
12.5. A key diagram of posets	87
12.6. The left column	88
12.7. The right column	90

12.8. Proof of Proposition 12.1.1	91
Bibliography	93
Index	95
