Contents

Introduction	1
Chapter 1. The basic $(\mathbf{S}-)$, (\mathbf{S}) , and $(\mathbf{S}+)$ settings	7
1.1. Conditions $(\mathbf{S}-)$, (\mathbf{S}) , and $(\mathbf{S}+)$ for local systems	7
1.2. Kloosterman and hypergeometric sheaves	15
1.3. More on condition $(\mathbf{S}+)$ for hypergeometric sheaves	19
1.4. Moments and monodromy	24
Chapter 2. Some basic facts about monodromy groups	33
2.1. Arithmetic semisimplicity	33
2.2. Finiteness of G_{geom} and G_{arith}	34
2.3. Geometric and arithmetic determinants	38
2.4. Infinite monodromy groups	53
2.5. Estimating the size of G_{geom} when it is finite	60
2.6. Limsup formula for moments	63
Chapter 3. Representations of reductive groups containing elements with special spectra	65
3.1. Almost quasisimple groups containing elements with simple spectra	65
3.2. Modules with small weight multiplicities	84
3.3. Regular spectrum and simple spectrum elements	97
Chapter 4. Hypergeometric sheaves with wild part of dimension one	103
4.1. General situation	103
4.2. Further analysis	106
Chapter 5. Tensor induced local systems	115
5.1. 2-tensor induced sheaves	115
5.2. Tensor induced sheaves: General case	123

Chapter 6. (Non-)existence results	145
6.1. Type A	145
6.2. Other types	177
Chapter 7. Extraspecial normalizers and local systems in odd characteristic	205
7.1. A supersingularity result	205
7.2. Linear groups in characteristic $p > 2$	212
7.3. Local systems in characteristic $p > 2$	218
Chapter 8. Extraspecial normalizers and local systems in characteristic 2	241
8.1. Squared traces in characteristic 2	241
8.2. Traces of elements in normalizers of extraspecial 2-groups	245
8.3. Linear groups in characteristic 2	258
8.4. Unitary-type subgroups	276
8.5. Local systems in characteristic $p = 2$	291
Chapter 9. Two further kinds of local systems in characteristic 2	313
9.1. Another kind of hypergeometric sheaf in characteristic 2	313
9.2. Local systems in characteristic 2 with Witt vectors: The \mathbb{F}_2 story	327
9.3. Local systems with Witt vectors: The \mathbb{F}_q story	343
Chapter 10. One-parameter families of exponential sums	369
10.1. Generalities	369
10.2. The $(A, 1)$ -case	386
10.3. The (A, B) -case	401
Chapter 11. Multi-parameter families of exponential sums	453
11.1. Preliminaries	453
11.2. The general case	462
Chapter 12. Local systems with non-monomial coefficients	485
12.1. Local systems of the first kind	485
12.2. Local systems of the second kind	495

12.3. Local systems of the third kind	506
12.4. Another approach to $M_{2,2}$	528
12.5. Some applications of almost injectivity	542
Appendices	561
Appendix A1: The Magma program used in Lemma 6.2.6	561
Appendix A2: The Magma program used in Lemma 10.3.17	562
Acknowledgements	563
Bibliography	565
Symbols	575
Index	579
