<i>Preface</i>	xv
<i>List of Figures</i>	xi
<i>List of Abbreviations</i>	xiii

## 1 Fundamentals of Organic Chemistry 1

---

Unit Introduction	1
1.1. Overview Of Organic Chemistry	4
1.1.1. Study of Carbon-Containing Compounds	5
1.1.2. Importance of Organic Chemistry	5
1.1.3. Historical Perspective	6
1.2. Unique Properties of Carbon	8
1.2.1. Tetravalent Nature	9
1.2.2. Bonding Versatility	9
1.2.3. Formation of Diverse Molecular Structures	11
1.3. Classification of Organic Compounds	12
1.3.1. Hydrocarbons	13
1.3.2. Functional Groups	14
1.3.3. Heteroatomic Organic Compounds	15
1.4. Nomenclature and Structural Representation	18
1.4.1. Nomenclature	18
1.4.2. IUPAC Nomenclature	18
1.4.3. Common Names and Trivial Names	20
1.4.4. Structural Representation	21
1.5. Basic Concepts in Organic Reactions	22
1.5.1. Reactants and Products	22
1.5.2. Reaction Types	23

1.5.3. Reaction Mechanisms	25
1.5.4. Factors Influencing Organic Reactions	26
1.6. Importance of Organic Chemistry in Everyday Life	27
1.6.1. Applications in Medicine	28
1.6.2. Applications in Materials Science	29
1.6.3. Applications in Environmental Science	30
1.6.4. Applications in Biochemistry	31
1.7. Summary	33
Review Questions	33
Multiple Choice Questions	33
References	35

## 2 Principles and Mechanisms of Organic Reactions 43

---

Unit Introduction	43
2.1. Basic Concepts	47
2.1.1. Chemical Bonding in Organic Molecules	47
2.1.2. Types of Organic Reactions	47
2.1.3. Thermodynamics and Kinetics of Organic Reactions	49
2.2. Reaction Mechanisms	50
2.2.1. General Principles of Reaction Mechanisms	50
2.2.2. Types of Reaction Mechanisms	52

2.2.3. Kinetic vs. Thermodynamic Control	53	3.2.3. Physical Properties of Cycloalkanes	95
2.3. Electrophilic and Nucleophilic Reactions	54	3.2.4. Chemical Properties of Cycloalkanes	96
2.3.1. Electrophilic Reactions	55	3.2.5. Ring-Opening Reactions	96
2.3.2. Nucleophilic Reactions	57	3.2.6. Ring-Closing Reactions	97
2.4. Radical Reactions	59	3.2.7. Substitution Reactions	97
2.4.1. Radical Formation	60	3.2.8. Isomerism in Cycloalkane	98
2.4.2. Radical Reactions	60	3.3. Conformational Analysis	99
2.5. Pericyclic Reactions	62	3.3.1. Definition and Importance	100
2.5.1. Definition of Pericyclic Reactions	62	3.3.2. Types of Conformations	100
2.5.2. Types of Pericyclic Reactions	63	3.3.3. Energy Differences Between Conformations	100
2.5.3. Woodward-Hoffmann Rules	64	3.3.4. Conformational Analysis of Cycloalkanes	101
2.6. Rearrangement Reactions	65	3.4. Stereochemistry of Alkanes and Cycloalkanes	101
2.6.1. Importance of Rearrangement Reactions	65	3.4.1. Chirality and Enantiomers	102
2.6.2. Definition of Rearrangement Reactions	66	3.4.2. Diastereomers and Meso-Compounds	103
2.6.3. Types of Rearrangement Reactions	66	3.4.3. Cis-Trans Isomerism in Cycloalkanes	103
2.7. Stereochemistry of Organic Reactions	68	3.5. Summary	104
2.7.1. Stereoisomers	68	Review Questions	104
2.7.2. Stereoselectivity	69	Multiple Choice Questions	104
2.7.3. Chirality in Organic Reactions	70	References	106
2.7.4. Stereochemistry	70		
2.7.5. Enantiomers and Diastereomers	71		
2.7.6. Stereoselectivity and Stereospecificity	71		
2.7.7. Chirality and Optical Activity	72		
2.7.8. Mechanisms of Stereochemical Control	72		
2.8. Summary	74		
Review Questions	74		
Multiple Choice Questions	75		
References	76		

## 3 Alkanes and Cycloalkanes 87

Unit Introduction	87
3.1. Alkanes	91
3.1.1. Naming Alkanes	91
3.1.2. Physical Properties of Alkanes	92
3.1.3. Chemical Properties of Alkanes	92
3.1.4. Isomerism in Alkanes	94
3.2. Cycloalkanes	95
3.2.1. Definition and General Formula	95
3.2.2. Naming Cycloalkanes	95

## 4 Alkenes and Alkynes 111

Unit Introduction	111
4.1. Nomenclature	114
4.1.1. Naming Alkenes	114
4.1.2. Naming Alkynes	115
4.2. Physical Properties	116
4.2.1. Physical Properties of Alkenes	116
4.2.2. Physical Properties of Alkynes	116
4.3. Chemical Reactions	117
4.3.1. Addition Reactions of Alkenes	117
4.3.2. Addition Reactions of Alkynes	119
4.4. Stereochemistry	120
4.4.1. Geometric Isomerism in Alkenes	120
4.4.2. Stereochemistry of Alkynes	121
4.5. Industrial Applications	121
4.5.1. Production of Plastics	122
4.5.2. Production of Organic Compounds	122
4.5.3. Petrochemical Industry	122
4.6. Biological Significance	123

4.6.1. Alkenes in Biological Systems	123
4.6.2. Alkynes in Biological Systems	123
4.7. Summary	125
Review Questions	125
Multiple Choice Questions	126
References	126

## 5 Aromatic Compounds: Structure and Reactivity 129

Unit Introduction	129
5.1. Structure Of Aromatic Compound	132
5.1.1. Definition of Aromatic Compounds	132
5.1.2. Criteria for Aromaticity: Hückel's Rule	133
5.1.3. Heterocyclic Compounds	134
5.2. Aromatic Substitution Reactions	136
5.2.1. Electrophilic Aromatic Substitution (EAS)	136
5.2.2. Nucleophilic Aromatic Substitution (NAS)	137
5.3. Other Reactions of Aromatic Compounds	138
5.3.1. Reduction of Aromatic Compounds	138
5.3.2. Oxidation of Aromatic Compounds	139
5.3.3. Friedel-Crafts Alkylation and Acylation	139
5.3.4. Rearrangement of Aromatic Compounds	139
5.4. Spectroscopic Analysis of Aromatic Compounds	140
5.4.1. UV-Visible Spectroscopy	140
5.4.2. Infrared (IR) Spectroscopy	141
5.4.3. Nuclear Magnetic Resonance (NMR) Spectroscopy	141
5.5. Applications of Aromatic Compounds	142
5.5.1. Pharmaceuticals and Drug Development	142
5.5.2. Agrochemicals and Pesticides	142
5.5.3. Polymers and Materials Science	143

5.5.4. Fragrances and Flavors	143
5.6. Summary	144
Review Questions	144
Multiple Choice Questions	145
References	146

## 6 Alcohols, Ethers, and Epoxides 151

Unit Introduction	151
6.1. Structural Characteristics of Alcohols, Ethers, and Epoxides	153
6.1.1. Alcohols	153
6.1.2. Ethers	155
6.1.3. Epoxides	156
6.2. Synthesis of Alcohols, Ethers, and Epoxides	157
6.2.1. Alcohols	157
6.2.2. Ethers	158
6.2.3. Epoxides	159
6.3. Chemical Reactions of Alcohols, Ethers, and Epoxides	160
6.3.1. Alcohols	160
6.3.2. Ethers	160
6.3.3. Epoxides	161
6.4. Spectroscopic Analysis of Alcohols, Ethers, And Epoxides	161
6.4.1. Infrared (IR) Spectroscopy	161
6.4.2. Nuclear Magnetic Resonance (NMR) Spectroscopy	162
6.5. Biological Significance Of Alcohols, Ethers, and Epoxides	163
6.5.1. Alcohols	163
6.5.2. Ethers	164
6.5.3. Epoxides	164
6.6. Summary	165
Review Questions	165
Multiple Choice Questions	165
References	166

# 7 Carbonyl Chemistry: Aldehydes, Ketones, Carboxylic Acid, and Their Derivatives 171

Unit Introduction	171
7.1. Overview of Aldehydes, Ketones, Carboxylic Acids, and their Derivatives	173
7.2. Aldehydes	173
7.2.1. Structure and Properties of Aldehydes	173
7.2.2. Preparation of Aldehydes	174
7.2.3. Reactions of Aldehydes with Nucleophiles	174
7.2.4. Oxidation of Aldehydes to Carboxylic Acids	174
7.2.5. Reduction of Aldehydes to Alcohols	175
7.2.6. Use of Aldehydes in Organic Synthesis	175
7.3. KETONES	175
7.3.1. Structure and Properties of Ketones	175
7.3.2. Preparation of Ketones	176
7.3.3. Reactions of Ketones with Nucleophiles	176
7.3.4. Reduction of Ketones to Secondary Alcohols	177
7.4. Carboxylic Acids	178
7.4.1. Preparation of Carboxylic Acids	178
7.4.2. Reactions of Carboxylic Acids with Nucleophiles	178
7.4.3. Acid-Catalyzed Esterification of Carboxylic Acids	178
7.4.4. Use of Carboxylic Acids in Organic Synthesis	179
7.5. Derivatives of Carboxylic Acids	179
7.5.1. Acid Chlorides	179
7.5.2. Acid Anhydrides and their Reactions	180
7.5.3. Esters and their Reactions	181
7.5.4. Amides and their Reactions	182
7.6. Spectroscopic Analysis of Carbonyl Compounds	183
7.6.1. Infrared (IR) Spectroscopy	183
7.6.2. Nuclear Magnetic Resonance (NMR) Spectroscopy	183

7.6.3. Mass Spectrometry (MS)	183
7.7. Applications of Carbonyl Chemistry	184
7.7.1. Pharmaceutical Industry	184
7.7.2. Polymer Industry	184
7.7.3. Fragrance and Flavor Industry	184
7.7.4. Agricultural Industry	185
7.7.5. Other Industrial Applications	185
7.8. Summary	186
Review Questions	186
Multiple Choice Questions	186
References	187

# 8 Amines, Amides, and Heterocyclic Compounds 191

Unit Introduction	191
8.1. Amines	193
8.1.1. Nomenclature of Amines	193
8.1.2. Physical Properties of Amines	194
8.1.3. Preparation of Amines	194
8.1.4. Reactions of Amines	194
8.2. AMIDES	195
8.2.1. Nomenclature of Amides	196
8.2.2. Physical Properties of Amides	197
8.2.3. Reactions of Amides	197
8.3. Heterocyclic Compounds	197
8.3.1. Nomenclature of Heterocyclic Compounds	198
8.3.2. Physical Properties of Heterocyclic Compounds	198
8.3.3. Preparation of Heterocyclic Compounds	198
8.3.4. Reactions of Heterocyclic Compounds	199
8.4. Heterocyclic Amines	199
8.4.1. Nomenclature of Heterocyclic Amines	199
8.4.2. Physical Properties of Heterocyclic Amines	199
8.4.3. Preparation of Heterocyclic Amines	199
8.4.4. Reactions of Heterocyclic Amines	200
8.5. Applications of Amines, Amides, and Heterocyclic Compounds	200
8.5.1. Pharmaceuticals	201

8.5.2. Agrochemicals	201	8.6. Summary	203
8.5.3. Dyes and Pigments	201	Review Questions	203
8.5.4. Polymers	201	Multiple Choice Questions	203
8.5.5. Other Applications	202	References	204

## **INDEX** **207**
