Chapter 1. Introduction	1
Outline	8
Acknowledgments	8
Chapter 2. Weinstein Domains and Kirby Calculus	9
2.1. Background on Weinstein domains	9
2.2. Weinstein Kirby calculus	11
2.3. Background on Weinstein structures on the cotangent bundle	12
Chapter 3. Toric transformations	15
3.1. The symplectic viewpoint.	15
3.2. The algebraic viewpoint	18
3.3. Toric 4-manifolds	19
3.4. Almost toric manifolds	19
Chapter 4. Weinstein structure on the complement of a partially smoothed total toric divisor	21
4.1. A local model of smoothing one node.	21
4.2. The topology of the complements.	22
4.3. The Lagrangian core and co-core of the 2-handle	24
4.4. The global Weinstein structure on the complement	27
4.5. An almost toric point of view	33
Chapter 5. Combinatorial Possibilities for Delzant Polytopes and resulting Weinstein divisor complements	39
5.1. On the richness of Delzant family	40
5.2. Non-uniqueness of Weinstein manifolds from Delzant polytopes	45
5.3. The centeredness condition	49
Chapter 6. Non-centered toric manifolds and obstructions	57
6.1. Exactness obstructions	57
6.2. Convexity obstructions	59
Chapter 7. Weinstein handlebody diagrams and cotangent bundles	65
7.1. Morsification of the canonical Weinstein structure	65
7.2. Weinstein handlebody diagrams for the canonical cotangent structure	66
Chapter 8. Lifting co-normals to Kirby diagrams	71
8.1. The procedure to obtain a standard Weinstein handlebody diagram	71
8.2. Step (1): Legendrian isotopy in the co-sphere bundle	74
8.3. Step (2): Standard Legendrian neighborhoods	75

8.4.	Transitioning from co-normal diagrams to the Gompf diagram	77
8.5.	Step (3): Satellite procedure	79
8.6.	Step (4): Simplifying the Gompf diagram	79
8.7.	Legendrian 1-handle slides	80
Chapter 9. Invariants		83
9.1.	Topological invariants	83
9.2.	Symplectic invariants	88
Chapter 10. Examples from the Algorithm		91
10.1.	Smoothing one node	91
10.2.	Smoothing adjacent nodes in a blow up	91
10.3.	Smoothing nodes in $\mathbb{C}\mathbb{P}^1 \times \mathbb{C}\mathbb{P}^1$	93
10.4.	Weinstein homotopic manifolds	99
10.5.	Smoothing multiple nodes in $\mathbb{C}\mathbb{P}^2$	102
10.6.	Smoothing nodes in $\mathbb{C}\mathbb{P}^2 \# 5\overline{\mathbb{C}\mathbb{P}^2}$	106
10.7.	Higher genus	109
10.8.	Non orientable surfaces	110
Bibliography		113
