

Contents

Chapter 1. Introduction	1
1.1. Results on pairs of ternary quadratic forms	1
1.2. Results on binary quartic forms	4
1.3. Results on $2 \times n \times n$ boxes	5
1.4. Methods	6
1.5. Side results	8
1.6. Conjectures on more general trace conditions	9
1.7. Structure of this work	12
1.8. Notation	12
Chapter 2. Global-to-local reduction	15
2.1. Higher composition laws	15
2.2. Reducing the theorems to a local theorem	22
2.3. The Tate pairing	30
Chapter 3. Tame quartic rings with not totally split resolvent, by multijection	33
3.1. Invertibility of ideals in orders	33
3.2. Self-duality of the count of quartic orders	34
Chapter 4. $2 \times n \times n$ boxes	39
Chapter 5. Introduction to counting quartic rings	45
5.1. The group H^1 of quartic algebras with given resolvent	46
5.2. Reduced bases	48
5.3. Resolvent conditions	57
Chapter 6. The conic over \mathcal{O}_K	69
6.1. Conics of low discriminant over a local field	69
6.2. Diagonal conics	74
6.3. The solution volume of the conic	77
6.4. The Brauer class	81
6.5. The squareness	84
6.6. \mathcal{N}_{11}	89
Chapter 7. Boxgroups	95
7.1. Signatures of subgroups of H^1	95
7.2. Boxgroups in unramified splitting type	96
7.3. Boxgroups in splitting type (1^3)	101
7.4. Boxgroups in splitting type $(1^2 1)$	104
7.5. The recentering lemma	117
7.6. Charmed cosets	119

7.7. The projectors	121
7.8. Notation	123
Chapter 8. Ring volumes for ξ'_1	125
8.1. The smearing lemma	125
8.2. The zones when \mathcal{N}_{11} is strongly active (black, plum, purple, blue, green, and red)	127
8.3. The zones when \mathcal{N}_{11} is weakly active (brown, yellow, and lemon)	143
8.4. The beige zone	153
8.5. Orthogonality	154
8.6. Smearred answers	160
8.7. The average value of a quadratic character on a box	162
Chapter 9. Ring volumes for ξ'_2	165
9.1. Tame splitting types	165
9.2. Splitting type (1^21)	169
Chapter 10. Further remarks on the code	175
10.1. The impish case	176
Appendix A. Examples of zone totals	179
A.1. Tame local quartic O-N	179
A.2. Wild local quartic O-N	180
Bibliography	197
