Chapter 1. Introduction	1
1.1. Mean curvature bounds and minimal boundaries in a non-smooth setting	2
1.2. A regularity theory for minimal boundaries on RCD spaces	4
1.3. Outline of the strategy to establish the Laplacian bounds of Theorem 1.2	6
1.4. Weak notions of Laplacian bounds	9
1.5. Hopf-Lax semigroup and lower Ricci curvature bounds	11
Acknowledgments	13
Chapter 2. Preliminaries	15
2.1. Slope, Cheeger energy, and weak upper gradient	15
2.2. General properties of $\text{RCD}(K, N)$ spaces	16
2.3. Non-collapsed spaces	18
2.4. Sets of finite perimeter	19
2.5. Laplacian, heat equation, and heat kernel	31
2.6. The Poisson equation	39
2.7. The Green function of a domain and applications	40
Chapter 3. The Laplacian on $\text{RCD}(K, N)$ spaces	47
3.1. Notions of Laplacian bounds	47
3.2. The main equivalence results	50
Chapter 4. Ricci curvature bounds, Hopf-Lax semigroups and Laplacian bounds	59
4.1. Smooth Riemannian manifolds	60
4.2. Kuwada's lemma	62
4.3. Hopf-Lax semigroup and Laplacian bounds in non-smooth setting	63
Chapter 5. Mean curvature bounds for minimal boundaries	67
5.1. Minimal boundaries and the Laplacian of the distance function	67
Chapter 6. Regularity theory	79
6.1. An $\varepsilon$ -regularity theorem	80
6.2. Sharp perimeter bounds for the equidistant sets from minimal boundaries	85
6.3. Partial regularity of minimal boundaries away from sets of codimension three	91
6.4. Quantitative estimates for singular sets of minimal boundaries	97

Appendix A. Laplacian bounds vs. mean curvature bounds: A comparison with the classical literature	107
