

Contents

Introduction	1
Part 1. Setting and General Methods	3
Chapter 1. Finite groups of Lie type	5
1.1. Basic sets and uni-triangularity	5
1.2. Unipotent characters and unipotent blocks	6
1.3. Deligne–Lusztig theory	7
1.4. On the existence of regular ℓ -elements	9
Chapter 2. Hecke algebras	11
2.1. Reduction stability	11
2.2. Embedding of decomposition matrices	13
2.3. Verifying reduction stability	14
Part 2. Decomposition Matrices	15
Chapter 3. Description of the strategy	17
Chapter 4. Decomposition matrices at $d_\ell(q) = 2$	19
4.1. Centralizers of ℓ -elements	19
4.2. Multiplicities in the Steinberg character	20
4.3. Unipotent decomposition matrix of $D_4(q)$	24
4.4. Unipotent decomposition matrix of $D_5(q)$	26
4.5. Unipotent decomposition matrix of $D_6(q)$	31
4.6. Unipotent decomposition matrix of $E_6(q)$	35
4.7. Unipotent decomposition matrix of ${}^2D_4(q)$	38
4.8. Unipotent decomposition matrix of ${}^2D_5(q)$	40
4.9. Unipotent decomposition matrix of ${}^2D_6(q)$	43
4.10. Unipotent decomposition matrix of ${}^2E_6(q)$	46
4.11. Unipotent decomposition matrices of $B_4(q)$ and $C_4(q)$	50
4.12. Unipotent decomposition matrix of $F_4(q)$	53
Chapter 5. Decomposition matrices at $d_\ell(q) = 3$	57
5.1. Even-dimensional split orthogonal groups	57
5.2. Unipotent decomposition matrix of $E_6(q)$	61
5.3. Even-dimensional non-split orthogonal groups	64
5.4. Symplectic and odd-dimensional orthogonal groups	65
5.5. Unipotent decomposition matrix of $F_4(q)$	68

Chapter 6. Decomposition matrices at $d_\ell(q) = 6$	71
6.1. Even-dimensional split orthogonal groups	71
6.2. Unipotent decomposition matrix of $E_6(q)$	78
6.3. A non-principal block of $E_8(q)$	80
6.4. Even-dimensional non-split orthogonal groups	81
6.5. Odd-dimensional orthogonal groups	84
6.6. Symplectic groups	90
6.7. Unipotent decomposition matrix of $F_4(q)$	90
Chapter 7. Decomposition matrices at $d_\ell(q) = 5, 7, 8, 10, 12, 14$	97
Chapter 8. On a conjecture of Craven	101
List of Tables	103
Bibliography	105
