Introduction	1
Chapter 1. The homogeneous version of the Da Prato–Grisvard theorem	15
1.1. Homogeneous operators and spaces	16
1.2. Homogeneous spaces and real interpolation	22
1.3. Da Prato–Grisvard’s theorem with homogeneous estimates	27
Chapter 2. The functional setting and basic interpolation results	35
2.1. Besov spaces and Littlewood–Paley decomposition	35
2.2. Solenoidal function spaces and extension operators	39
Chapter 3. The Stokes operator with a Neumann-type boundary condition	51
3.1. Generation properties of the Stokes operator	51
3.2. Other homogeneous estimates of the Stokes operator	54
3.3. The homogeneous Stokes operator and interpolation theory for its domain	59
3.4. Maximal regularity for the Stokes operator in homogeneous Besov spaces	63
Chapter 4. A free boundary problem for incompressible viscous flows	65
4.1. The free boundary problem for incompressible fluids	65
4.2. Nonlinear estimates	69
4.3. Study of the nonhomogeneous Stokes system	74
4.4. The fixed point procedures	83
Chapter 5. The Lamé operator in the upper half-space	87
Chapter 6. A free boundary problem for pressureless gases	97
6.1. The main result	98
6.2. The boundary value problem for the Lamé system in the half-space	100
6.3. Maximal regularity for the Lamé system in the half-space	113
6.4. The Lamé system in a perturbed half-space	119
6.5. Proof of the global existence result	122
Appendix A. Appendix	129
A.1. Product estimates	129
A.2. An interpolation result	131
A.3. Regularity properties of diffeomorphisms	133
A.4. Explicit solution formula for the Lamé system in the half-plane	135
A.5. Resolvent estimates for the Neumann Laplacian	138
Bibliography	143
