Chapter 1. Introduction	1
1.1. Sato–Tate groups of abelian varieties	1
1.2. Abelian surfaces	2
1.3. Abelian threefolds	2
1.4. Applying the classification	3
1.5. New phenomena	4
1.6. Ingredients of the classification: upper bound	5
1.7. Ingredients of the classification: lower bound	5
1.8. Tables, code, and data	6
1.9. Desiderata in dimension 3	7
1.10. Abelian varieties of higher dimension	8
Acknowledgments	9
Chapter 2. Conventions	11
Chapter 3. Background on Sato–Tate groups	13
3.1. The Mumford–Tate group	13
3.2. Definition of the Sato–Tate group	13
3.3. Twisting and the Sato–Tate group	14
3.4. Axioms for Sato–Tate groups	15
3.5. Endomorphism rings of abelian threefolds	15
3.6. Connected Sato–Tate groups of abelian threefolds	17
Chapter 4. The classification upper bound, part 1	19
4.1. Basic cases	19
4.2. Split products	19
4.3. Triple products	22
4.4. The case $G^0 = \mathrm{SU}(2)_3$	24
Chapter 5. The classification upper bound, part 2: The case $G^0 = \mathrm{U}(1)_3$	25
5.1. Overview	25
5.2. The rationality condition	26
5.3. Abelian groups	30
5.4. Extensions of C_2	34
5.5. Exceptional groups from $\mathrm{SU}(2)$	36
5.6. Extensions of A_3	38
5.7. Extensions of S_3	39
5.8. Solvable exceptional subgroups	39
5.9. Simple exceptional groups	40
5.10. Standard and nonstandard extensions: overview	40

5.11.	Standard and nonstandard extensions: computations	42
5.12.	Maximal subgroups	47
5.13.	Consistency checks	48
Chapter 6.	Statistics on Sato–Tate distributions	51
6.1.	Group invariants	51
6.2.	Averages over connected groups	53
6.3.	Averages over disconnected groups of central type	54
6.4.	Averages over disconnected groups not of central type	57
6.5.	Point densities	59
6.6.	A MAGMA computation	60
Chapter 7.	Methods for explicit realizations of abelian threefolds	63
7.1.	Curves with automorphisms	63
7.2.	Twisting constructions	66
7.3.	Exhaustive searches	68
7.4.	Explicit computation of L -functions of abelian threefolds	71
7.5.	Computing L -polynomials of isogeny twists	74
Chapter 8.	The lower bound via explicit realizations	77
8.1.	Overview of techniques	77
8.2.	Examples: types A to M	78
8.3.	Examples: type N	83
8.4.	Numerical consistency check	92
Chapter 9.	Tables	93
Bibliography		99
