

Contents

Chapter 1. Introduction	1
1.1. Motivation and the main result	1
1.2. Previous results	2
1.3. Main ingredients in the proof	3
1.4. Overview of the paper	12
1.5. Notation	13
Chapter 2. Preliminaries	17
2.1. Inertial types	17
2.2. Fontaine–Laffaille theory	18
2.3. Breuil–Kisin modules with descent	21
2.4. Étale φ -modules	22
2.5. Galois representations and φ -modules	23
Chapter 3. The geometry of $\widetilde{\mathcal{FL}}_{\mathcal{J}}$	25
3.1. A partition on $\widetilde{\mathcal{FL}}_{\mathcal{J}}$	25
3.2. Niveau partition	31
3.3. Standard coordinates	38
Chapter 4. The invariant functions on $\widetilde{\mathcal{FL}}_{\mathcal{J}}$	41
4.1. Definition of invariant functions	41
4.2. From stacks to schemes	44
4.3. Main results on invariant functions: Statement	49
Chapter 5. Combinatorics of Λ -lifts	51
5.1. Preliminary on Λ -lifts	51
5.2. Combinatorics of Λ -decompositions	56
5.3. Constructible Λ -lifts	63
Chapter 6. Construction of invariant functions	83
6.1. Construction of type I	84
6.2. Construction of type II	85
6.3. Construction of type III	87
6.4. Invariance condition	96
Chapter 7. Invariant functions and constructible Λ -lifts	99
7.1. Explicit invariant functions: statements	99
7.2. Explicit determinants	100
7.3. Data associated with a constructible Λ -lift	102
7.4. Explicit formula: Type I	103
7.5. Explicit formula: Type II	109

7.6. Explicit formula: Type III	115
7.7. Main results on invariant functions: proof	132
7.8. Summary and Examples	138
Chapter 8. $\widetilde{\mathcal{FL}}_{\mathcal{J}}, \widetilde{\mathcal{Fl}}_{\mathcal{J}}$ and Serre weights	143
8.1. Serre weights and Galois representations	144
8.2. Local models for the Emerton–Gee stacks and their components	145
8.3. Relevant types and Serre weights	149
8.4. The partition $\mathcal{P}_{\mathcal{J}}$ and extremal weights	151
Chapter 9. Canonical lifts of invariant functions	155
9.1. Sub inertial type and index set	155
9.2. Extremal shape	156
9.3. Invariant functions and Weil–Deligne representations	161
Chapter 10. Local-global compatibility	165
10.1. Hecke actions	165
10.2. Axiomatic approach to recover Galois representations	169
10.3. Local-global compatibility for Hecke eigenspaces	174
Appendix A. Figures	179
Bibliography	189
