

Contents

Chapter 1. Introduction	1
1.1. Motivation through three examples	2
1.2. The field of uniformizers	4
1.3. Description of the basic objects	5
1.4. How to interpret the example	8
1.5. Results of the text	10
Addendum	14
Acknowledgments	15
Chapter 2. Preliminaries	17
2.1. Rings, fields, modules	18
2.2. Analytic functions with values in non-archimedean Banach algebras	22
2.3. Drinfeld modules and exponential functions	26
2.4. Some functions associated with the Carlitz module	33
Chapter 3. Field of uniformizers	39
3.1. Some algebras and fields	39
3.2. Tame series	53
Chapter 4. Quasi-periodic functions, representations of the first kind	63
4.1. Quasi-periodic functions	63
4.2. Representations of the first kind	67
4.3. Hecke operators	74
4.4. Remarks on representations	76
Chapter 5. Structure results for modular forms	79
5.1. Changing the coefficient field	79
5.2. Finiteness results	81
5.3. Poincaré series	87
5.4. Eisenstein series	97
Chapter 6. Differential operators on modular forms, Perkins' series	99
6.1. Higher derivatives on tame series	100
6.2. Divided higher derivatives of ρ -quasi-periodic functions	101
6.3. Serre's derivatives	104
6.4. Application to Perkins' series	104
Chapter 7. Eisenstein series for ρ_{Σ}^*	109
7.1. Link between Eisenstein series and Poincaré series	110
7.2. The v -valuation of Eisenstein series	110
7.3. Application to modular forms of weight one for ρ_{Σ}^*	112

7.4. Rationality and integrality of coefficients	114
7.5. Negative weight modular forms and functional identities	115
7.6. Some applications to quasi-modular and \mathfrak{v} -adic modular forms	120
Chapter 8. Modular forms for the representations ρ_{Σ}^*	129
8.1. Structure of weak modular forms	129
8.2. Strongly regular modular forms	132
8.3. More structure properties	136
Chapter 9. Harmonic product and Eisenstein series	143
9.1. Existence of the harmonic product	144
9.2. Explicit formulas	149
9.3. A conjecture on multiple sums	155
Chapter 10. Perspectives on algebraic properties of Eisenstein series	157
10.1. Multiple Eisenstein series	157
10.2. A conjecture for zeta values in Tate algebras	161
10.3. A modular analogue	163
Bibliography	165
