Arithmetic of Critical p -Adic L -Functions

Denis Benois
Kâzım Büyükboduk

May 2026 • Volume 321 • Number 1635 (second of 6 numbers)

Contents

Preface	ix
Chapter 1. Introduction	1
1.1. Basic notation	1
1.2. p -adic L -functions of modular forms	2
1.3. The θ -critical case	4
1.4. Overview of constructions and results	7
Acknowledgments	20
Chapter 2. General constructions	21
2.1. The large exponential map	21
2.2. Selmer complexes	34
2.3. p -adic heights	41
Chapter 3. Critical p -adic L -functions	51
3.1. The eigenspace-transition principle	51
3.2. Abstract critical p -adic L -functions	58
3.3. Modular symbols and p -adic L -functions	65
3.4. Euler systems and p -adic L -functions	72
Chapter 4. Main Conjectures for the punctual eigencurve and the improved critical p -adic L -functions	83
4.1. Iwasawa theory for θ -critical forms: Preliminaries	84
4.2. Selmer groups and critical $\mathcal{L}$ -invariants	86
4.3. Modules of algebraic p -adic L -functions	106
4.4. Main Conjecture for θ -critical forms	113
4.5. Iwasawa theoretic descent	116
Chapter 5. Main Conjectures for the infinitesimal deformation	133
5.1. The fundamental line	133
5.2. Main Conjectures for the infinitesimal thickening of critical p -adic L -functions	140
Chapter 6. Thick Selmer groups and derivatives of critical p -adic L -functions	157
6.1. Recap and motivation	157
6.2. Selmer complexes revisited	159
6.3. p -adic regulators and leading term formulae	169
Bibliography	187
