

Table of Contents

Preface	11
Introduction.	13

Chapter 1 Plane Co-ordinate Geometry

1.1 A review of the fundamental ideas	17
1.1.1 Cartesian co-ordinates in the plane	17
1.1.2 Equations of a straight line	18
1.1.3 Equations of plane curves	19
1.1.4 Some important formulae relating points and lines.	22
1.1.5 Intersections between lines and curves.	23
1.1.6 Tangents and normals to curves	23
1.1.7 Parametric equations of lines and curves	24
1.1.8 Intersection of two parametric curves	27
1.1.9 Curvature.	27
1.2 Special techniques in plane co-ordinate geometry	28
1.2.1 The use of polar co-ordinates for curves with rotational symmetry.	28
1.2.2 Calculation of conic sections satisfying given continuity and tangency requirements	31
1.2.3 The envelope of a family of curves	36
1.2.4 Intrinsic equations of a curve.	40

Chapter 2 Three Dimensional Geometry and Vector Algebra

2.1 Three dimensional co-ordinates	43
2.2 Introduction to vectors.	46
2.3 Vector Algebra I – Definitions and simple geometrical appli- cations.	50
2.3.1 Definitions.	50
2.3.2 Consequences of these definitions.	51
2.3.3 Magnitude of a vector. Unit vector	52
2.3.4 Cartesian components of a vector	52

2.3.5	The vector equations of a straight line	55
2.3.6	Examples.	56
2.4	Vector Algebra II – The scalar and vector products	57
2.4.1	Introduction.	57
2.4.2	Component of a vector along a given direction: the scalar product	58
2.4.3	The vector equation of a plane.	60
2.4.4	Vector perpendicular to two given vectors a and b : the vector product.	61
2.4.5	Applications of the vector product	64
2.4.6	Triple scalar product	65
2.4.7	Triple vector product	66
Chapter 3 Co-ordinate Transformations		
3.1	Introduction.	69
3.2	Object transformations.	70
3.2.1	Translation.	70
3.2.2	Rotation about the <i>Oz</i> -axis	70
3.2.3	Rotation of a vector about a general axis through the origin.	71
3.2.4	Examples.	73
3.2.5	Scaling and reflection transformations.	74
3.2.6	Shear transformation	75
3.2.7	The use of homogeneous co-ordinates	75
3.2.8	Examples.	78
3.3	Plane projections of three dimensional space.	79
3.3.1	Parallel projections	79
3.3.2	Central projections (perspective views)	81
3.4	Oblique co-ordinates	84
Chapter 4 Three Dimensional Curve and Surface Geometry		
4.1	Parametric description of curves and surfaces	87
4.1.1	Parametric description of curves.	87
4.1.2	Examples.	88
4.1.3	Parametric description of surfaces.	89
4.1.4	Examples.	89
4.1.5	Advantages of the parametric description of curves and surfaces	91
4.1.6	Surfaces of revolution	92
4.1.7	Examples.	92
4.2	Elementary differential geometry	93
4.2.1	Differentiation of a vector.	93

4.2.2	Taylor's theorem for vector functions	95
4.2.3	Tangent to a curve	96
4.2.4	The principal normal and binormal to a curve	99
4.2.5	The torsion of a curve; Frenet-Serret formulae	102
4.2.6	Examples	104
4.2.7	Differential geometry of surfaces	105
4.2.8	Metrical properties of surfaces	107
4.2.9	Curvature of a surface	110
4.2.10	Parameter transformations	113
4.2.11	Envelope of a family of space curves	114
4.2.12	Ruled surfaces	115
4.2.13	Developable surfaces	116
4.2.14	Arc lengths, areas and volumes for parametric curves	118
4.3	Implicit equations of surfaces and curves in three dimensions	121
4.3.1	Implicit equations of a surface	121
4.3.2	The normal vector to the surface $f(x,y,z) = 0$	121
4.3.3	Equations of a space curve	123
4.3.4	Tangent vector to a space curve	123
4.3.5	The APT surface definitions	124

Chapter 5 Curve and Surface Design

5.1	Parametric cubic equations for curve and surface design	126
5.1.1	Introduction	126
5.1.2	Ferguson's parametric cubic curves	126
5.1.3	Bézier's cubic UNISURF curves	129
5.1.4	The Bernstein-Bézier polynomial curve	132
5.1.5	Special cases of the Bézier cubic curve	134
5.1.6	Ferguson's cubic surface patches	134
5.1.7	Bézier UNISURF surface patches	136
5.2	Rational parametric curves and surfaces	138
5.2.1	Rational quadratic parametrisation of a segment of a conic section	138
5.2.2	Rational cubic curves	144
5.2.3	Rational surface patches	148
5.3	Parameter transformations for polynomial and rational para- metric curves and surfaces	149
5.4	Area subtended by a plane Bézier curve	151

Chapter 6 Composite Curves and Splines

6.1	Introduction	153
6.2	The fitting of plane curves	154

6.2.1	Classical methods	154
6.2.2	Polynomial splines	156
6.2.3	B-splines	162
6.2.4	Further aspects of B-splines.	164
6.3	Parametric composite curves	169
6.3.1	Composite Ferguson curves	171
6.3.2	Composite Bézier curves	172
6.3.3	Composite rational quadratic and cubic curves.	174
6.3.4	Parametric splines	176
6.3.5	B-spline curves	178
6.3.6	Parametrisation and tangent vectors	183
6.4	Two further practical systems	187
6.5	Local adjustment of composite curves	192
Chapter 7 Composite Surfaces		
7.1	Introduction: Coons' patches.	198
7.2	Tensor-product surfaces	203
7.2.1	Ferguson surfaces	204
7.2.2	Bézier (UNISURF) surfaces.	210
7.2.3	Rational parametric surfaces	218
7.2.4	Parametric spline surfaces	223
7.2.5	B-spline surfaces	227
7.3	Lofted surfaces	228
7.4	Non-parametric surfaces	231
7.5	Spline-blended surfaces.	234
7.6	Degenerate patches	235
7.7.	Curves on parametric surfaces; patch dissection.	238
Chapter 8 Cross-sectional Designs		
8.1	Linear axis designs using Bézier patches	240
8.1.1	Design with proportional cross-sections	242
8.1.2	Blend between two cross-sections, using one profile curve only	244
8.1.3	Blend between two cross-sections, using two profile curves	245
8.2	Linear axis designs using generalised Bézier patches	247
8.3	Cross-sectional designs based on proportional development	250
8.4	Cross-sectional design based on a curved spine.	252
8.5	Areas and volumes of linear axis designs.	254

Chapter 9 Computing Methods for Surface Design and Manufacture

9.1	Intersections of curves and surfaces.	257
9.1.1	Introductory remarks.	257
9.1.2	Solution of the equations	259
9.1.3	Step length determination.	261
9.1.4	Solution of the surface intersection problem using least-squares minimisation algorithms	265
9.2	Offset surfaces	267
9.3	Cutter paths for numerical control	268
9.4	Intersection between a line and a surface	272
9.5	The development of developable surfaces.	274
9.6	Piecewise linear approximation of a parametric curve.	275

Appendix 1 Elementary Matrix Algebra

A1.1	Preliminary definitions	278
A1.2	The laws of matrix algebra	278
A1.3	The product of two matrices	279
A1.4	Properties of matrix products	281
A1.5	Non-singular matrices.	283
A1.6	The transpose of a matrix	284
A1.7	Orthogonal matrices.	284
A1.8	Matrix representation of the scalar and vector products	285
A1.9	Partitioned matrices.	286

Appendix 2 Determinants	288
--	-----

Appendix 3 Important Properties of Polynomials	291
---	-----

Appendix 4 Numerical Solution of Polynomial and Other Non-linear Equations

A4.1	Solution of a single equation	295
A4.2	Numerical solution of a system of non-linear equations.	297

Appendix 5 Approximation Using Polynomials

A5.1	Introduction.	301
A5.2	Least-squares polynomial curve fitting.	302
A5.3	Polynomial interpolation: Lagrange's method	304

A5.4 Polynomial interpolation: Hermite's method	308
A5.5 Polynomial interpolation: Divided differences.	308
A5.6 Numerical integration and differentiation.	313
A5.7 Further reading on numerical analysis	314
Bibliography.	315
Index	325
