Preface	xiii
Frequently Used Notation	xvii
I Foundations	1
1 Linear Models	3
1.1 Stochastic processes	3
1.2 The covariance world	5
1.2.1 Second-order stationary processes	5
1.2.2 Spectral representation	9
1.2.3 Wold decomposition	13
1.3 Linear processes	15
1.3.1 What are linear Gaussian processes?	15
1.3.2 ARMA models	16
1.3.3 Prediction	19
1.3.4 Estimation	21
1.4 The multivariate cases	25
1.4.1 Time domain	25
1.4.2 Frequency domain	27
1.5 Numerical examples	28
Exercises	30
2 Linear Gaussian State Space Models	33
2.1 Model basics	33
2.2 Filtering, smoothing, and forecasting	36
2.3 Maximum likelihood estimation	42
2.3.1 Newton–Raphson	42
2.3.2 EM algorithm	43
2.4 Smoothing splines and the Kalman smoother	45
2.5 Asymptotic distribution of the MLE	47
2.6 Missing data modifications	49
2.7 Structural component models	50
2.8 State-space models with correlated errors	53
2.8.1 ARMAX models	54

2.8.2	Regression with autocorrelated errors	56
	Exercises	56
3	Beyond Linear Models	61
3.1	Nonlinear non-Gaussian data	62
3.2	Volterra series expansion	68
3.3	Cumulants and higher-order spectra	69
3.4	Bilinear models	72
3.5	Conditionally heteroscedastic models	73
3.6	Threshold ARMA models	77
3.7	Functional autoregressive models	78
3.8	Linear processes with infinite variance	79
3.9	Models for counts	81
3.9.1	Integer valued models	81
3.9.2	Generalized linear models	83
3.10	Numerical examples	84
	Exercises	89
4	Stochastic Recurrence Equations	91
4.1	The Scalar Case	93
4.1.1	Strict stationarity	93
4.1.2	Weak stationarity	98
4.1.3	GARCH(1, 1)	102
4.2	The Vector Case	107
4.2.1	Strict stationarity	109
4.2.2	Weak stationarity	111
4.2.3	GARCH(p, q)	114
4.3	Iterated random function	118
4.3.1	Strict stationarity	118
4.3.2	Weak stationarity	121
	Exercises	123
II	Markovian Models	131
5	Markov Models: Construction and Definitions	133
5.1	Markov chains: Past, future, and forgetfulness	133
5.2	Kernels	134
5.3	Homogeneous Markov chain	136
5.4	Canonical representation	138
5.5	Invariant measures	139
5.6	Observation-driven models	142
5.7	Iterated random functions	143
5.8	MCMC methods	152
5.8.1	Metropolis-Hastings algorithm	152
5.8.2	Gibbs sampling	155

CONTENTS	ix
Exercises	157
6 Stability and Convergence	165
6.1 Uniform ergodicity	166
6.1.1 Total variation distance	166
6.1.2 Dobrushin coefficient	167
6.1.3 The Doeblin condition	169
6.1.4 Examples	169
6.2 V-geometric ergodicity	173
6.2.1 V-total variation distance	173
6.2.2 V-Dobrushin coefficient	174
6.2.3 Drift and minorization conditions	175
6.2.4 Examples	180
6.3 Some proofs	186
6.4 Endnotes	188
Exercises	189
7 Sample Paths and Limit Theorems	195
7.1 Law of large numbers	196
7.1.1 Dynamical system and ergodicity	196
7.1.2 Markov chain ergodicity	203
7.2 Central limit theorem	211
7.3 Deviation inequalities for additive functionals	218
7.3.1 Rosenthal type inequality	218
7.3.2 Concentration inequality	221
7.4 Some proofs	225
Exercises	231
8 Inference for Markovian Models	239
8.1 Likelihood inference	239
8.2 Consistency and asymptotic normality of the MLE	245
8.2.1 Consistency	245
8.2.2 Asymptotic normality	247
8.3 Observation-driven models	254
8.4 Bayesian inference	263
8.5 Some proofs	271
8.6 Endnotes	274
Exercises	275
III State Space and Hidden Markov Models	285
9 Non-Gaussian and Nonlinear State Space Models	287
9.1 Definitions and basic properties	287
9.1.1 Discrete-valued state space HMM	287
9.1.2 Continuous-valued state-space models	295

9.1.3	Conditionally Gaussian linear state-space models	297
9.1.4	Switching processes with Markov regimes	300
9.2	Filtering and smoothing	302
9.2.1	Discrete-valued state-space HMM	303
9.2.2	Continuous-valued state-space HMM	310
9.3	Endnotes	314
	Exercises	315
10	Particle Filtering	321
10.1	Importance sampling	321
10.2	Sequential importance sampling	329
10.3	Sampling importance resampling	334
10.3.1	Algorithm description	335
10.3.2	Resampling techniques	336
10.4	Particle filter	337
10.4.1	Sequential importance sampling	337
10.4.2	Auxiliary sampling	339
10.5	Convergence of the particle filter	341
10.5.1	Exponential deviation inequalities	341
10.5.2	Time-uniform bounds	343
10.6	Endnotes	349
	Exercises	350
11	Particle Smoothing	361
11.1	Poor man's smoother algorithm	362
11.2	FFBSm algorithm	365
11.3	FFBSi algorithm	367
11.4	Smoothing functionals	369
11.5	Particle independent Metropolis-Hastings	370
11.6	Particle Gibbs	376
11.7	Convergence of the FFBSm and FFBSi algorithms	381
11.7.1	Exponential deviation inequality	384
11.7.2	Asymptotic normality	386
11.7.3	Time uniform bounds	390
11.8	Endnotes	394
	Exercises	397
12	Inference for Nonlinear State Space Models	405
12.1	Monte Carlo maximum likelihood estimation	407
12.1.1	Particle approximation of the likelihood function	407
12.1.2	Particle stochastic gradient	410
12.1.3	Particle Monte Carlo EM algorithms	412
12.1.4	Particle stochastic approximation EM	415
12.2	Bayesian analysis	418
12.2.1	Gaussian linear state space models	419

CONTENTS	xi
12.2.2 Gibbs sampling for NLSS model	423
12.2.3 Particle marginal Markov chain Monte Carlo	428
12.2.4 Particle Gibbs algorithm	431
12.3 Endnotes	433
Exercises	435
13 Asymptotics of the MLE for NLSS	441
13.1 Strong consistency of the MLE	442
13.1.1 Forgetting the initial distribution	442
13.1.2 Approximation by conditional likelihood	444
13.1.3 Strong consistency	445
13.1.4 Identifiability of mixture densities	452
13.2 Asymptotic normality	453
13.2.1 Convergence of the observed information	458
13.2.2 Limit distribution of the MLE	460
13.3 Endnotes	461
Exercises	462
IV Appendices	467
Appendix A Some Mathematical Background	469
A.1 Some measure theory	469
A.2 Some probability theory	471
Appendix B Martingales	475
B.1 Definitions and elementary properties	475
B.2 Limits theorems	477
Appendix C Stochastic Approximation	483
C.1 Robbins–Monro algorithm: Elementary results	484
C.2 Stochastic gradient	487
C.3 Step size selection and averaging	488
C.4 The Kiefer–Wolfowitz procedure	488
Appendix D Data Augmentation	491
D.1 The EM algorithm in the incomplete data model	492
D.2 The Fisher and Louis identities	494
D.3 Monte Carlo EM algorithm	495
D.3.1 Stochastic approximation EM	496
D.4 Convergence of the EM algorithm	498
D.5 Convergence of the MCEM algorithm	500
D.5.1 Convergence of perturbed dynamical systems	500
D.5.2 Convergence of the MCEM algorithm	502
