<i>Preface</i>	page	ix
<i>List of Contributors</i>		xi
1	Towards fluid equations by approximate deconvolution models	1
	<i>L.C. Berselli</i>	
2	On flows of fluids described by an implicit constitutive equation characterized by a maximal monotone graph	23
	<i>M. Bulíček, P. Gwiazda, J. Málek, K.R. Rajagopal, & A. Świerczewska-Gwiazda</i>	
3	A continuous model for turbulent energy cascade	52
	<i>A. Cheskidov, R. Shvydkoy, & S. Friedlander</i>	
4	Remarks on complex fluid models	70
	<i>P. Constantin</i>	
5	A naive parametrization for the vortex-sheet problem	88
	<i>A. Castro, D. Córdoba, & F. Gancedo</i>	
6	Sharp and almost-sharp fronts for the SQG equation	116
	<i>C.L. Fefferman</i>	
7	Feedback stabilization for the Navier–Stokes equations: theory and calculations	130
	<i>A.V. Fursikov & A.A. Kornev</i>	
8	Interacting vortex pairs in inviscid and viscous planar flows	173
	<i>T. Gallay</i>	

- 9** **Stretching and folding diagnostics in solutions of the three-dimensional Euler and Navier–Stokes equations** 201
J.D. Gibbon & D.D. Holm
- 10** **Exploring symmetry plane conditions in numerical Euler solutions** 221
R.M. Kerr & M.D. Bustamante
- 11** **On the decay of solutions of the Navier–Stokes system with potential forces** 235
I. Kukavica
- 12** **Leray–Hopf solutions to Navier–Stokes equations with weakly converging initial data** 251
G. Seregin
