

CONTENTS

1	INTRODUCTION	1
2	BASIC EQUATIONS	2
2.1	Electromagnetic Field Equations	2
2.2	Electromagnetic Boundary Conditions	3
2.3	Turbulent Flow Equations	5
2.4	Flow Boundary Conditions	7
3	MODEL OF THE ELECTROMAGNETIC CHANNEL	9
3.1	Use of electromagnetic channels	9
3.2	Computational model	11
4	CALCULATION OF THE ELECTROMAGNETIC FIELD	14
4.1	The Magnetic Vector Potential	16
4.1.1	Choice of Grid	16
4.1.2	Discretization Equations	16
4.1.3	Application of Boundary Conditions	17
4.1.4	Electric Field Intensity Induced by Motion	19
4.1.5	Boundary Expressions for Adjacent Potentials	20
4.2	The Magnetic Scalar Potential	21
4.2.1	The Variables-Separation Method	21
4.2.2	Determination of Constants by Boundary Conditions	22
4.3	The Electric Potential	23
4.3.1	Discretization Equations	23
4.3.2	Boundary Values of Electric Field Intensity Due to Motion	24
4.3.3	Treatment of Boundary Conditions	25
4.4	The Force Density	27
5	CALCULATION OF TURBULENT FLOW	28
5.1	The Velocity Field	29
5.1.1	The Staggered Grid	29
5.1.2	The Upwind Scheme	30
5.1.3	Discretized Momentum Equations	32
5.1.4	The Wall Shear Stresses	34
5.1.5	Utilization of Boundary Conditions	35

5.1.6	Stability Limitation of Time Step	37
5.1.7	Pressure and Velocity Correction	38
5.2	The Turbulent Viscosity Field	39
5.2.1	Discretization Equations of Turbulence Model	39
5.2.2	Use of Boundary Conditions	41
5.3	The Free Surface Form	42
6	RESULTS	44
	Appendix 1: Determination of Boundary Conditions for $\bar{A}$ on a Ferromagnetic Body Surface	49
	Appendix 2: Formulae for Flat Induction Machines	50
	REFERENCES	51
