

CONTENTS

Preface	ix
1. Introduction	1
1.1. General description of service systems	1
1.1.1. Characteristics of holding-times	4
1.1.2. Characteristics of the flow of demands	4
1.1.3. The queue-discipline	5
1.1.4. The time-dependence of the system's behaviour; steady-state conditions	6
1.1.5. What are the questions that are normally asked?	7
1.1.6. Situations not covered by the described model	8
1.1.7. Analysis versus simulation	9
1.2. Characteristics of holding-times; continuation	10
1.3. Characteristics of the arrival process	17
1.3.1. The Poisson arrival process	18
1.3.2. Virtual and actual demands; time- and demand-averages	19
1.3.3. A simple birth-process; the Poisson distribution	20
1.3.4. The distribution of interarrival-times for the Poisson arrival process	22
1.3.5. Other distributions of interarrival-times	23
1.4. Kendall's classification	24
2. The Standard Cases	26
2.1. Probability of blocking for the system $M/M/c$ -blocking	26
2.2. The Engset formula	31
2.3. Probability of delay and average waiting-time for the system $M/M/c$ -delay	33
2.4. Econometric considerations	37
3. The Distribution of Waiting-times in the System $M/M/c$-delay	41
3.1. First-come-first-served	41
3.2. Last-come-first-served	42
3.3. "Random"-condition	45
3.4. Comparison of the cases "first-come-first-served", "last-come-first-served" and "random"	47
3.5. A note on analytical methods	48

4. General Holding-time Assumption (<i>CM</i>-class)	50
4.1. The case $M/G/c$ -blocking	51
4.2. The case $M/G/1$ -delay	55
4.3. A note on the system $M/G/c$ -delay	60
4.4. Use of Erlang- k distributions	62
4.5. Hyperexponential distributions	67
5. Non-stationary Behaviour	71
5.1. Markov process with a finite number of states	71
5.2. The case $M/M/c$ -blocking; transient behaviour	75
5.3. Transient behaviour of the system $M/G/1$ -delay	79
6. Priority	86
6.1. Non-pre-emptive priority	87
6.2. Pre-emptive priority; breakdown of machines	92
7. Restricted Availability	101
7.1. Introduction	101
7.2. Restricted availability; exact evaluation of probabilities of blocking	104
7.3. Approximate determination of probabilities of blocking; characteristics of overflow traffic	107
8. Arrival and Service in Batches	112
8.1. Introduction	112
8.2. Arrivals in batches; individual service (exponential holding-time)	113
8.3. Service in batches of capacity c ; constant holding-time	115
8.4. The "custodian's problem"	119
8.5. The "unscheduled ferry problem"	123
9. Simulation	127
9.1. Introduction; non-analytical methods	127
9.2. Principles of time-true simulation	130
9.3. Principles of roulette simulation	131
9.4. The implementation of randomness	135
9.5. Accuracy of simulation results	139
9.6. The "cluster effect"	142
Appendix: Generating Functions and Laplace Transforms	148
References	155
Author Index	159
Subject Index	161
Other titles in series	166
