Foreword to the English Edition	x
Foreword to the Original Edition	xii
Preface to the English Edition	xiv
Preface to the Second Edition	xv
Introduction	xvi

<b>Chapter 1 Theoretical Background</b>	<b>1</b>
1.1 Introduction	1
1.2 Random processes	1
1.2.1 Definitions	1
1.2.2 Family of finite-dimensional distribution functions and existence theorem	2
1.2.3 Separability	3
1.2.4 Measurability	5
1.2.5 Sample functions: continuity and step functions	5
1.2.6 Classification	6
1.3 Markov processes	7
1.3.1 Definitions	7
1.3.2 Transition functions and homogeneity	8
1.3.3 Family of finite-dimensional distributions and existence theorem	9
1.3.4 Semigroup property and Feller transition functions	10
1.3.5 Strong Markov property	10
1.4 Markov chains	11
1.4.1 Definitions and transition matrices	11
1.4.2 Classification of states	14
1.4.3 Decomposition of the state space	15
1.5 Denumerable Markov processes	15
1.5.1 Definitions	15
1.5.2 Properties of sample functions	17
1.5.3 Canonical processes	18
1.5.4 Special examples	19

## PART I GENERAL CONSTRUCTION THEORY

<b>Chapter 2 Introduction to Construction Theory</b>	<b>23</b>
2.1 Introduction	23
2.2 Notation and definitions	23

2.3	The problem of construction	26
2.4	Continuity	27
2.5	Existence of $Q$ matrices	31
2.6	Differentiability	33
2.7	The Kolmogorov equations	40
2.8	Resolvent operators	44
2.9	Feller's existence theorem	50
2.10	Properties of the minimal solution	53
2.11	Exit family and entrance family	57
2.12	General form of $Q$ processes	64
<b>Chapter 3 Construction of <math>Q</math> Processes in Simple Cases</b>		<b>67</b>
3.1	Introduction	67
3.2	Single exit case: construction of $Q$ processes satisfying the backward equations	67
3.3	Null exit case: construction of $Q$ processes with one non-conservative state	71
3.4	Single entrance case: construction of $Q$ processes satisfying the forward equations	75
<b>Chapter 4 Uniqueness</b>		<b>79</b>
4.1	Introduction	79
4.2	Uniqueness theorem: the system of backward equations	79
4.3	Uniqueness theorem: the system of forward equations	80
4.4	Criterion for uniqueness: the Hou–Reuter theorem	81
 <b>PART II CONSTRUCTION THEORY OF BIRTH–DEATH PROCESSES</b>		
<b>Chapter 5 Bilateral Birth–Death Processes</b>		<b>87</b>
5.1	Introduction	87
5.2	Natural scale and standard measure	87
5.3	Classification of boundary points	88
5.4	Second-order difference operator	89
5.5	Solution of the equation $\lambda u - D_\mu u^+ = 0$	91
5.6	Minimal solution	97
5.7	Several lemmas	100
5.8	One of $r_1$ and $r_2$ is entrance or natural, the other is exit or regular	105
5.9	Both $r_1$ and $r_2$ are regular or exit: linearly dependent case	106
5.10	Both $r_1$ and $r_2$ are regular or exit: linearly independent case	108
5.11	The condition that $\alpha\phi(\lambda) \in l$	118
<b>Chapter 6 Birth–Death Processes</b>		<b>122</b>
6.1	Introduction	122
6.2	Classification of boundary point and second-order difference operator	123
6.3	Solution of the equation $\lambda u - D_\mu u^+ = 0$	126
6.4	Construction of the minimal solution	128
6.5	Several lemmas	131

6.6	Construction of the $Q$ processes satisfying the backward equations	136
6.7	Construction of the $Q$ processes satisfying the forward equations	137
6.8	Construction of the $Q$ processes satisfying neither backward nor forward equations	139
6.9	The condition that $\alpha\phi(\lambda) \in l$	145

## PART III MARTIN BOUNDARY AND ITS APPLICATION IN THE CONSTRUCTION THEORY

### Chapter 7 Martin Boundary and $Q$ Processes 149

7.1	Introduction	149
7.2	Markov chains	150
7.3	Martin boundary theory	154
7.3.1	Excessive function and excessive measure	155
7.3.2	Density function of an excessive measure	158
7.3.3	Martin kernel	161
7.3.4	Martin boundary	163
7.3.5	Distribution of ultimate states	166
7.3.6	$h$ -Chain and the Martin representation of an excessive function	168
7.3.7	Essential Martin boundary	171
7.3.8	Uniqueness of Martin representation	175
7.3.9	Minimal excessive function	176
7.3.10	Ultimate field and ultimate random variables	177
7.3.11	Martin entrance boundary	179
7.4	Probability representation of a stopping potential	179
7.5	Sojourn solution, ultimate set, almost closed set and boundary	181
7.6	Canonical process	183
7.7	Probabilistic $Q$ process	186
7.8	Probabilistic minimal process	188
7.9	Resolvent process and induced process	191
7.10	Probability representation of the $\Pi(\lambda)$ potential	194
7.11	$\lambda$ -Image and standard image	195
7.12	Boundary of minimal $Q$ process	198
7.13	Probability representation of $\mathcal{M}_\lambda^+$	202
7.14	Atomic and non-atomic exit boundary of the minimal $Q$ process	203
7.15	Exiting almost closed set and the Blackwell decomposition of the minimal $Q$ process	204
7.16	The condition for finite exit	205
7.17	A conditional independence theorem	206
7.18	Further description of general $Q$ processes	209
7.19	Instantaneous return process and its boundary	210

### Chapter 8 Construction of $Q$ Processes with Finite Non-conservative States and Finite Exit Boundary 213

8.1	Introduction	213
8.2	Basic hypothesis and the condition satisfied by $F^a(\lambda)$	213
8.3	Simplification of the problem	215

8.4	General form of $F^a(\lambda)$	218
8.5	Non-sticky case	222
8.6	General construction	226
8.7	Equivalent construction	232
8.8	Remarks on the construction of the non-bifinite $Q$ process	234

## PART IV PATH STRUCTURE OF DENUMERABLE MARKOV PROCESSES

<b>Chapter 9</b>	<b>The <math>W</math> Transformation and Strong Limit</b>	<b>239</b>
9.1	Introduction	239
9.2	Definition of $W$ transformation	239
9.3	Strong limit theorem	240
	9.3.1 In the case that $X$ is a function	240
	9.3.2 In the case that $X$ is a process	242
9.4	The proof of Theorem 3.1	244
9.5	Several lemmas	248
9.6	Proof of the strong limit theorem	252
9.7	Several kinds of special strong limit theorems	254
<b>Chapter 10</b>	<b>Leaping Interval and Entrance Decomposition</b>	<b>257</b>
10.1	Introduction	257
10.2	Definition of leaping interval	257
10.3	Leaping point and leaping interval	259
10.4	Leaping interval and Kolmogorov equations	262
10.5	The ${}_M g_n$ transformation and its strong limit theorem	266
10.6	Entrance decomposition of a process	270
10.7	The ${}_M f_n$ transformation and its strong limit theorem	271
<b>Chapter 11</b>	<b>Extension of Processes</b>	<b>274</b>
11.1	Introduction	274
11.2	D-type extension	274
11.3	D*-type extension	281
11.4	Doob processes	283
11.5	Generalized D-type extension	284
11.6	Generalized D*-type extension	289
11.7	Extension of instantaneous-return processes	290
11.8	On non-sticky extensions	292
11.9	Stochastic chains and characteristic measures	293
11.10	Initial time and lifetime of approximating $\Pi$ -chains	298
11.11	Imbedded chains	301
11.12	$Q$ process on a measure space	308
11.13	Approximating minimal $Q$ processes	310
11.14	Entrance families and approximating minimal processes	311
11.15	Approximating minimal $Q$ processes on a totally finite measure space	319

11.16	Path structure of non-sticky return processes: DV-type and (DV)*-type extensions	321
11.17	Generalized DV-type and generalized (DV)*-type extensions	324

## PART V CONSTRUCTION THEORY OF BIRTH–DEATH PROCESSES: PROBABILITY METHOD

<b>Chapter 12</b>	<b>Probability Structure of Birth–Death Processes</b>	<b>333</b>
12.1	Introduction	333
12.2	Probability explanation of the characteristic numbers	333
12.3	An extended Dynkin lemma	338
12.4	Recurrence and ergodic property of the honest process	339
12.5	Two lemmas	340
12.6	Characteristic sequence	342
12.7	Probability structure of processes	350
12.8	Summary	355
<b>Chapter 13</b>	<b>Relation Between Two Kinds of Construction Theories of Birth–Death Processes</b>	<b>357</b>
13.1	Introduction	357
13.2	Corresponding theorems	357
13.3	Properties of the process at the first leaping point	359

## PART VI PROPERTIES OF MARKOV PROCESSES RELATED TO CONSTRUCTION THEORY

<b>Chapter 14</b>	<b>Properties of Birth–Death Processes</b>	<b>363</b>
14.1	Introduction	363
14.2	Some fine results of the minimal processes	363
14.3	Invariant measures of the minimal processes	368
14.4	Distribution of the first returning time	369
<b>Chapter 15</b>	<b>Recurrence and Ergodic Properties</b>	<b>371</b>
15.1	Introduction	371
15.2	Two lemmas	371
15.3	Doob processes	372
15.4	Single exit processes	374
15.5	First-order processes	375
15.6	Bilateral birth–death processes	382
