Preface vii

Preface to Second Edition xi

CHAPTER 1 INTRODUCTION: STATISTICAL INFERENCE AND DECISION-MAKING 1

- 1.1 *What is Statistics?* 1
- 1.2 *Probability models* 4
- 1.3 *Relevant information* 7
- 1.4 *Statistical inference and decision-making* 13
- 1.5 *Different approaches* 16
- 1.6 *Arbitrariness and controversy* 19
- 1.7 *Historical comment and further references* 23
- References* 26

CHAPTER 2 AN ILLUSTRATION OF THE DIFFERENT APPROACHES 28

- 2.1 *A practical example* 28
- 2.2 *Sample data as the sole source of information: the classical approach* 31
 - 2.2.1 *Batch quality* 32
 - 2.2.2 *Component lifetimes* 42
- 2.3 *Relevant prior information: the Bayesian approach* 45
 - 2.3.1 *Prior information on batch quality* 46
 - 2.3.2 *Prior attitudes about component lifetimes!* 51
- 2.4 *Costs and consequences: simple decision theory ideas* 53
- 2.5 *Comment and comparisons* 61
- References* 62

CHAPTER 3 PROBABILITY 64

- 3.1 *Types of probability* 64
- 3.2 *'Classical' probability* 73
- 3.3 *The frequency view* 75

- 3.4 *Logical probability* 80
- 3.5 *Subjective probability* 84
- 3.6 *Other viewpoints* 91
- 3.7 *Some historical background* 92
- 3.8 *And so . . .* 93
- 3.9 *And yet . . .* 94
- References* 94

CHAPTER 4 UTILITY AND DECISION-MAKING 96

- 4.1 *Setting a value on rewards and consequences* 98
- 4.2 *The rational expression of preferences* 103
- 4.3 *Preferences for prospects and mixtures of prospects* 104
- 4.4 *The numerical assessment of prospects* 106
- 4.5 *The measurement of utilities* 108
 - 4.5.1 *Formal construction of utilities* 108
 - 4.5.2 *Personal expression of utilities* 110
- 4.6 *Decision-making* 111
- 4.7 *The utility of money* 112
- 4.8 *Comment: mathematical refinements: distinctions of attitude* 115
- References* 117

CHAPTER 5 CLASSICAL INFERENCE 119

- 5.1 *Basic aims and concepts* 121
 - 5.1.1 *Information and its representation* 123
- 5.2 *Estimation and testing hypotheses—the dual aims* 127
- 5.3 *Point estimation* 132
 - 5.3.1 *Criteria for point estimators* 133
 - 5.3.2 *Optimum estimators* 139
 - 5.3.3 *Methods of constructing estimators* 146
 - 5.3.4 *Estimating several parameters* 154
- 5.4 *Testing statistical hypotheses* 157
 - 5.4.1 *Criteria for hypothesis tests* 157
 - 5.4.2 *Uniformly most powerful tests* 162
 - 5.4.3 *Construction of tests* 169
- 5.5 *Region and interval estimates* 172
- 5.6 *Ancillarity, conditionality, modified forms of sufficiency and likelihood* 176
- 5.7 *Comment and controversy* 180
 - 5.7.1 *Initial and final precision* 181
 - 5.7.2 *Hypothesis tests and decisions* 184
 - 5.7.3 *Counter criticism* 185
 - References* 188

CHAPTER 6 BAYESIAN INFERENCE 190

- 6.1 *Thomas Bayes* 190
- 6.2 *The Bayesian method* 192
- 6.3 *Particular techniques* 196
- 6.4 *Prior ignorance* 206
- 6.5 *Vague prior knowledge* 209
- 6.6 *Substantial prior knowledge* 211
 - 6.6.1 *Conjugate prior distributions* 213
- 6.7 *Empirical Bayes' methods; meta-prior distributions* 217
 - 6.7.1 *Empirical Bayes' methods* 218
 - 6.7.2 *Meta-prior distributions* 220
- 6.8 *Comment and controversy* 222
 - 6.8.1 *Interpretation of prior and posterior distributions* 222
 - 6.8.2 *Sufficiency, likelihood and unbiasedness* 225
 - 6.8.3 *Controversy* 226
- References* 228

CHAPTER 7 DECISION THEORY 231

- 7.1 *An illustrative example* 233
- 7.2 *Basic concepts and principles* 242
 - 7.2.1 *The decision theory model* 244
 - 7.2.2 *The no-data situation* 244
 - 7.2.3 *Sample data* 245
- 7.3 *Attainment and implementation* 249
 - 7.3.1 *Admissibility and unbiasedness* 250
 - 7.3.2 *Determination of Bayes' decision rules* 254
 - 7.3.3 *Minimax decision rules* 258
 - 7.3.4 *Estimation and hypothesis testing* 258
- 7.4 *Problems with finite numbers of actions, and states of nature* 263
 - 7.4.1 *The no-data problem* 263
 - 7.4.2 *The use of sample data* 265
- 7.5 *Extensions and modifications* 266
- 7.6 *Critical comment* 269
- References* 271

CHAPTER 8 SOME OTHER APPROACHES 273

- 8.1 *Fiducial inference* 274
- 8.2 *Likelihood inference* 282
- 8.3 *Plausibility inference* 287
- 8.4 *Structural inference* 289
- 8.5 *Pivotal inference* 296
- 8.6 *Information* 298
