PREFACE

CHAPTER 1. INTRODUCTORY STATISTICAL REMARKS	1
I. Statistical Notations	1
A Glossary	1
B Sampling	4
II. Statistical Strategy in Pharmacochemical Designs	6
A Experimental model and design	6
B Robustness of parametric statistics	18
III. Transformations	20
A The problem of rectification	20
B The importance of transformations	22
C Transformation of continuously distributed data	24
D Discrete variables	32
E Special transformations	36
IV. Conclusions	43
V. References for Further Reading	43
VI. Programs for Computer-Aided Design of Experiments	44
A Regression experiments	44
B Factorial experiments	44

CHAPTER 2. SIMPLE LINEAR REGRESSION	45
I. Underlying Theory	45
A Goal of the analysis	45
B Layout and algorithms	47
C Robust regression	64
II. Relationships Among Estimation Procedures	71
III. Experimental Examples	73
A Physical organic chemistry	73
B Biochemistry	84
C Drug-receptor interactions	98
D Physiological pharmacology	117
IV. Conclusions	162
V. References for Further Reading	162
CHAPTER 3. SIMULTANEOUS STATISTICAL INFERENCE AND MULTIVARIATE TEST CRITERIA	163
I. Simultaneous Statistical Inference	163
A Experimental error rate	163
B Transition of univariate to multivariate design	166
C Quantiles of simultaneous tests	169
II. Multivariate Test Criteria	189
III. Canonical Variables	198
IV. Generalised Multivariate Design	200
V. Decision-Theoretical Paradigm	203
VI. References for Further Reading	205
CHAPTER 4. MULTIPLE AND MULTIVARIATE REGRESSION ANALYSIS	207
I. Layout and Algorithms	207
A Experimental design	207
B Underlying formalisms	214
C Decision procedure	220
D Relationships to other techniques	226
II. Multiple-Regression Analysis by Example	226
A Biochemistry	226
B Physical chemistry	247
C Pharmacology	271
III. Multivariate Regression Analysis by Example	295

A	Multivariate QSAR: Analysis of a psychopharmacological profile of phenothiazines	295
B	Grouped observations of membrane-perturbing agents: Complex least-squares analysis of variance	310
C	Canonical correlation	322
IV.	Conclusions	326
V.	References for Further Reading	327
CHAPTER 5. PRINCIPAL-COMPONENT ANALYSIS		329
I.	Layout and Algorithms	329
A	Experimental design	329
B	Underlying formalisms	333
C	Decision procedure	337
II.	Principal-Component Analysis by Example	341
A	Pharmacological experiments	341
B	Medicinal chemistry	364
C	Physical chemistry	373
III.	Conclusions	376
IV.	References for Further Reading	376
CHAPTER 6. NON-LEAST-SQUARES REGRESSION ANALYSIS		379
I.	The Discipline-Specific Problem of Multicollinearity in LFER and QSAR Studies	379
A	Description of the problem	379
B	Consequences of the problem	381
C	Approximate solutions of the problem	382
II.	Principal-Component Regression Analysis	383
A	Layout and algorithms	383
B	Decision procedure	393
III.	Principal-Component Correlation Analysis	396
IV.	Principal-Component Regression Analysis by Example	397
A	Physical chemistry	397
B	Medicinal chemistry	413
C	Agricultural chemistry: Pyrethroid insecticides	437
V.	Conclusions and Further Remarks	442
VI.	References for Further Reading	443

CHAPTER 7. GENERALISED LEAST-SQUARES REGRESSION	445
I. The Experimental Problem	445
II. The Regressands are Subject to Error	445
III. The Regressors are Subject to Error	446
IV. Generalised Least-Squares Regression	446
V. References for Further Reading	450
CHAPTER 8. ANALYSIS OF CATEGORIC DATA	451
I. Introductory Remarks	451
II. Comparison of Frequencies	451
A Comparison of two frequencies	451
B Two-by-two contingency table	453
C Multicontingency tables	457
III. Regression Applied to Categorical Data	460
IV. Discriminant Analysis	461
A Global test	461
B A-priori probabilities and cost coefficients	462
C Classification analysis	465
V. References for Further Reading	466
CHAPTER 9. MULTIVARIATE VARIANCE-DISCRIMINANT-CLASSIFICATION ANALYSIS	467
I. The Experimental Question	467
II. The Two-Group Case	468
A Binary regression in relationship to two-group linear discriminant analysis	468
B Two-group variance-discriminant-classification analysis	473
C Logistic discriminant function	491
III. One-Way Layout of the Multiple-Group Case	495
A Experimental design	495
B Underlying formalisms	499
C Decision procedure	503
D Experimental examples	507
IV. Two-Way Layout of the Multiple-Group Case	526
A Experimental design	526
B Underlying formalisms	529
C Decision procedure and hypothesis testing	535
D Two-way layout by example	537
V. Conclusions	549

VI.	Appendix: Relationship Between Canonical-Discriminant and Canonical-Correlation Analysis	550
A	Experimental design	550
B	Data analysis	550
C	Conclusions	568
VII.	References for Further Reading	568
 CHAPTER 10. TIME-DEPENDENT COMPARISONS		 571
I.	Introductory Remarks	571
II.	Matched-Pair Test	571
A	Layout and algorithms	571
B	Example	574
III.	One-Group Profile Analysis	575
A	Repeated-measurement analysis	575
B	Trend analysis: Variance-analytical design	583
C	Trend analysis: Curve-fitting	588
IV.	Profile Analysis of Multiple Groups	594
A	Variance analysis	594
B	Polynomial regression	601
C	Example	604
V.	Conclusions	608
VI.	References for Further Reading	608
 CHAPTER 11. ANALYSIS OF HETEROGENEOUS DATA		 609
I.	The Role of Heterogeneous Data	609
II.	Principles of Analysis of Heterogeneous Data	609
A	Difference measures	609
B	Randomised block design	610
C	Covariance analysis	611
III.	Complex Least-Squares Analysis of Covariance	613
A	Underlying idea	613
B	Bioassay example	613
IV.	One-Way Layout of Multivariate Covariance Analysis	619
A	Layout and algorithms, and data analysis	619
B	Example	629
C	Supplementary remarks	634
V.	Two-Way Layout of Multivariate Covariance Analysis	637
A	Experimental design	637

B	Underlying formalisms	638
C	Decision procedure	640
VI.	Conclusions	642
VII.	References for Further Reading	643
 CHAPTER 12. MULTIVARIATE STRATEGY IN PHARMACOCHEMISTRY		 645
 CHAPTER 13. APPENDIX: SOURCES OF DATA USED		 649
 GLOSSARY OF SYMBOLS		 653
 INDEX		 657
