

Contents

<i>Preface</i>	iii
1. Overview <i>The scope of experimental design</i>	1
2. Screening <i>Designs for identifying active factors</i>	23
3. Factor Influence Studies <i>Applications of full and fractional factorial designs at 2 levels</i>	79
4. Statistical and Mathematical Tools <i>Introduction to multi-linear regression and analysis of variance</i>	151
5. Response Surface Methodology <i>Predicting responses within the experimental region</i>	185
6. Optimization <i>Pharmaceutical process optimization and validation</i>	247
7. Variability and Quality <i>Analysing and minimizing variation</i>	295
8. Exchange Algorithms <i>Methods for non-standard designs</i>	327
9. Mixtures <i>Introduction to statistical experimental design for formulation</i>	351
10. Mixtures in a Constrained Region of Interest <i>Screening, defining the domain, and optimizing formulations</i>	413

Appendix I. A Summary of Matrix Algebra	455
Appendix II. Experimental Designs and Models for Screening	460
Appendix III. Designs for Response Surface Modelling	473
Appendix IV. Choice of Computer Software	481
Appendix V. Symbols	490
<i>Index</i>	493
