

CONTENTS

<i>Preface</i>	v
<i>Mathematical Symbols and Notation</i>	xi
CHAPTER 1	1
INTRODUCTION	
Signals, Systems, and Models / Analysis and Design / General Systems / Content / Terminology / Background	
CHAPTER 2	12
SIGNAL MODELS	
Definitions / Elementary Forms and Linear Combinations / General Models / Frequency Domain Models / Signal Spectra / Auxiliary Functions / Stochastic Signals / Summary of Signal Models / Signal Conversions	

CHAPTER 3	185
LINEAR SYSTEM MODELS	
Definitions / Linear Systems and Response Functions / Linear Differential and Difference Equations / Vector-Matrix Equations and State Variables / Controllability and Observability / System Model Conversions / Linearization	
CHAPTER 4	396
LINEAR SYSTEM RESPONSE	
General Input/Output Problems / Deterministic Cases / Stochastic Cases / Identification / Computer Generation of Signals	
CHAPTER 5	522
SYSTEM PERFORMANCE	
Stability / Fidelity or Accuracy / Sensitivity / Reliability	
CHAPTER 6	619
APPLICATIONS	
Introduction / Signal Processing / Network Analysis / Aircraft Control / Electric Power Systems / Other Applications / Postscript	
APPENDICES	751
A. Fourier, Laplace, and Z- Transforms	714
B. Matrices and Vector Spaces	792
C. Probability and Random Variables	824
D. A Digital Computer Program	850
