Preface	xi
Acknowledgments	xv
<b>Chapter 1. Problem Formulation</b>	<b>1</b>
1.1. What is a Linear Programming Problem?	1
1.2. How to Formulate an LP	6
1.3. Advanced Problem Formulation	14
1.4. The Development of Linear Programming	21
Discussion	22
References	22
<b>Chapter 2. Geometric Motivation</b>	<b>24</b>
2.1. A Normal Example	24
2.2. Finite Improvement Algorithms	32
2.3. An Infeasible Example	35
2.4. An Unbounded Example	38
2.5. The Geometry of an LP Having Three Variables	41
Discussion	46
References	46
<b>Chapter 3. Proof Techniques</b>	<b>47</b>
3.1. The Truth of It All	47
3.2. The Forward-Backward Method	49
3.3. Definitions and Mathematical Terminology	54
3.4. Quantifiers I: The Construction Method	57
3.5. Quantifiers II: The Choose Method	60
3.6. Quantifiers III: Induction	63

3.7. Quantifiers IV: Specialization	66
3.8. The Contradiction Method	68
3.9. The Contrapositive Method	70
3.10. Nots of Nots Lead to Knots	73
3.11. Special Proof Techniques	75
3.12. Summary	79
Discussion	84
References	84
<b>Chapter 4. Linear Algebra</b>	<b>85</b>
4.1. Vectors	85
4.2. Matrices	91
4.3. Solving Linear Equations with Matrices I	97
4.4. Solving Linear Equations with Matrices II	105
4.5. Linear Algebra in Linear Programming	113
4.6. Converting an LP to Standard Form	123
Discussion	130
References	131
<b>Chapter 5. The Simplex Algorithm</b>	<b>132</b>
5.1. Basic Feasible Solutions	132
5.2. The Test for Optimality	143
5.3. Determining a Direction of Movement	146
5.4. Determining the Amount of Movement	150
5.5. Moving: The Pivot Operation	157
5.6. A Summary of the Simplex Algorithm	165
5.7. Degeneracy	176
Discussion	185
References	186
<b>Chapter 6. Phase 1</b>	<b>187</b>
6.1. The Phase 1 Problem	187
6.2. Solving the Phase 1 Problem	191
6.3. Initiating Phase 2	197
Discussion	210
References	210
<b>Chapter 7. Computational Implementation</b>	<b>211</b>
7.1. Computational Considerations	211
7.2. The Revised Simplex Algorithm	215
→ 7.3. Advanced Basis Handling Techniques	223
7.4. Matrix Inversion	235
7.5. Special Structure	241
7.6. Computational Improvements in Phase 1	243
Discussion	251
References	252

<b>Chapter 8. Duality Theory</b>	<b>254</b>
8.1. The Dual Linear Programming Problem	254
—8.2. Economic Interpretation of the Dual	262
8.3. Weak Duality	265
8.4. Strong Duality	273
8.5. The Dual Simplex Algorithm	281
Discussion	289
References	289
<b>Chapter 9. Sensitivity and Parametric Analysis</b>	<b>290</b>
9.1. Changes in the $\mathbf{c}$ Vector	290
9.2. Changes in the $\mathbf{b}$ Vector	301
9.3. Changes in the $\mathbf{A}$ Matrix	309
9.4. The Addition of a New Variable or Constraint	312
Discussion	317
References	318
<b>Chapter 10. Techniques for Handling Bound Constraints</b>	<b>319</b>
10.1. Finite Bounds	319
10.2. Handling Nonbasic Values Between Their Bounds	327
10.3. Generalized Upper Bounding	334
Discussion	344
References	344
<b>Chapter 11. Network Flow Problems</b>	<b>345</b>
11.1. The Network LP and Its Properties	345
11.2. The Simplex Algorithm for Network Flow Problems	349
11.3. The Phase 1 Procedure for Network Flow Problems	359
Discussion	364
References	365
<b>Appendix A. The Tableau Method</b>	<b>367</b>
<b>Appendix B. How Efficiently Can We Solve LP Problems?</b>	<b>375</b>
<b>Index</b>	<b>387</b>
