<i>Preface to the Revised Edition</i>	xi
<i>Preface to the First Edition</i>	xiii

## **Chapter 1 Basic Concepts, Problems, and Examples**

1.1 Dynamical Systems, Inputs, and Outputs	1
1.2 Internal Description of $\Sigma$	3
1.3 Realizations	6
1.4 Controllability and Observability	7
1.5 Stability and Feedback	11
1.6 Optimality	13
1.7 Stochastic Disturbances	17
Notes and References	19

## **Chapter 2 Mathematical Description of Linear Dynamical Systems**

2.1 Introduction	21
2.2 Dynamical Systems	21
2.3 External Description	27
2.4 Frequency-Domain Analysis	28
2.5 Transfer Functions	30
2.6 Impulse-Response Function	31
Notes and References	33

## **Chapter 3 Controllability and Reachability**

3.1 Introduction	35
3.2 Basic Definitions	36

3.3	Time-Dependent Linear Systems	39
3.4	Discrete-Time Systems	43
3.5	Constant Systems	47
3.6	Positive Controllability	52
3.7	Relative Controllability	55
3.8	Conditional Controllability	57
3.9	Structural Controllability	58
3.10	Controllability and Transfer Functions	61
3.11	Systems with a Delay	62
	Miscellaneous Exercises	64
	Notes and References	68
<b>Chapter 4</b>	<b>Observability/Constructibility</b>	
4.1	Introduction	72
4.2	Basic Definitions	73
4.3	Basic Theorems	75
4.4	Duality	81
4.5	Functional Analytic Approach to Observability	82
4.6	The Problem of Moments	83
	Miscellaneous Exercises	84
	Notes and References	85
<b>Chapter 5</b>	<b>Structure Theorems and Canonical Forms</b>	
5.1	Introduction	88
5.2	State Variable Transformations	90
5.3	Control Canonical Forms	91
5.4	Observer Canonical Forms	97
5.5	Invariance of Transfer Functions	99
5.6	Canonical Forms and the Bezoutiant Matrix	101
5.7	The Feedback Group and Invariant Theory	104
	Miscellaneous Exercises	111
	Notes and References	114
<b>Chapter 6</b>	<b>Realization Theory</b>	
6.1	Introduction	117
6.2	Algebraic Equivalence and Minimal Realizability	118
6.3	Construction of Realizations	124
6.4	Minimal Realization Algorithm	127
6.5	Examples	128
6.6	Realization of Transfer Functions	131
6.7	Uniqueness of Minimal Realizations	132
6.8	Partial Realizations	133
6.9	Reduced Order Models and Balanced Realizations	138
	Miscellaneous Exercises	140
	Notes and References	145

**Chapter 7 Stability Theory**

7.1	Introduction	147
7.2	Some Examples and Basic Concepts	149
7.3	Routh–Hurwitz Methods	152
7.4	Lyapunov Method	156
7.5	Frequency-Domain Techniques	162
7.6	Feedback Control Systems and Stability	164
7.7	Modal Control	169
7.8	Observers	173
7.9	Structural Stability	174
	Miscellaneous Exercises	177
	Notes and References	179

**Chapter 8 The Linear-Quadratic-Gaussian Problem**

8.1	Motivation and Examples	182
8.2	Open-Loop Solutions	185
8.3	The Maximum Principle	187
8.4	Some Computational Considerations	190
8.5	Feedback Solutions	192
8.6	Generalized $X$ - $Y$ Functions	196
8.7	Optimality versus Stability	204
8.8	A Low-Dimensional Alternative to the Algebraic Riccati Equation	214
8.9	Computational Approaches for Riccati Equations	216
8.10	Structural Stability of the Optimal Closed-Loop System	219
8.11	Inverse Problems	220
8.12	Linear Filtering Theory and Duality	227
8.13	The Separation Principle and Stochastic Control Theory	231
8.14	Discrete-Time Problems	233
8.15	Generalized $X$ - $Y$ Functions Revisited	234
	Miscellaneous Exercises	235
	Notes and References	240

**Chapter 9 A Geometric-Algebraic View of Linear Systems**

9.1	Algebra, Geometry, and Linear Systems	246
9.2	Mathematical Description of a Linear System	247
9.3	The Module Structure of $\Omega$ , $\Gamma$ , and $X$	249
9.4	Some System-Theoretic Consequences	253
9.5	Transfer Functions	257
9.6	Realization of Transfer Functions	260
9.7	The Construction of Canonical Realizations	263
9.8	Partial Realizations	271
9.9	Pole-Shifting and Stability	273
9.10	Systems over Rings	274
9.11	Some Geometric Aspects of Linear Systems	278
9.12	Feedback, the McMillan Degree, and Kronecker Indices	283

9.13	Some Additional Ideas from Algebraic Geometry	285
9.14	Pole Placement for Linear Regulators	288
9.15	Multivariable Nyquist Criteria	291
9.16	Algebraic Topology and Simplicial Complex of $\Sigma$	292
	Miscellaneous Exercises	298
	Notes and References	310
<b>Chapter 10 Infinite-Dimensional Systems</b>		
10.1	Finiteness as a System Property	317
10.2	Reachability and Controllability	319
10.3	Observability and Duality	323
10.4	Stability Theory	325
10.5	Realization Theory	327
10.6	The LQG Problem	330
10.7	Operator Riccati Equations and Generalized $X$ - $Y$ Functions	332
	Miscellaneous Exercises	335
	Notes and References	345
	<b>Index</b>	347
