

TABLE OF CONTENTS

Introduction	1
------------------------	---

PART I MATHEMATICAL PRELIMINARIES

1. Some Linear Algebra	11
2. Linear Differential Equations: Existence and Uniqueness Theorems	31
3. Linear Difference Equations	50
4. Some More Linear Algebra	52
5. Dual Spaces, Norms, and Inner Products	73

PART II STATE SPACE LINEAR SYSTEMS

6. State Space Linear Systems: Formal Definitions and Gen- eral Properties	89
7. Realizations	104
8. Eigenvectors, Eigenvalues, and Normal Modes	114
9. The $M + N$ Decomposition for Matrices Which are Not Semi-Simple	132
10. Complex Matrices and the Unitary Diagonalizability of Hermitian Matrices	145
11. The Jordan Canonical Form	150
12. Positive Definiteness, Matrix Factorization, and an Imper- fect Analogy.	162
13. Reachability and Controllability for Time-Invariant Continuous-Time Systems	176
14. Reachability and Controllability for Time-Invariant Discrete-Time Systems	187
15. Observability for Time-Invariant Continuous-Time Sys- tems	195
16. Observability and Constructibility for Time-Invariant Discrete-Time Systems	202
17. The Canonical Structure Theorem.	208

PART III
INPUT-OUTPUT LINEAR SYSTEMS

18. Formal Definitions and General Properties	219
19. Frequency Responses and Transfer Functions of Time-Invariant Continuous-Time Systems	236
20. Frequency Responses and Transfer Functions of Time-Invariant Discrete-Time Systems	250
21. Realizations and McMillan Degree.	262
22. Polynomial Matrices and Matrix Fraction Descriptions	289

PART IV
STABILITY AND FEEDBACK

23. Stability of State Space Linear Systems	322
24. Stability of Input-Output Linear Systems	350
25. Feedback, Observers, and Canonical Forms	365
26. The Discrete-Time Linear Quadratic Regulator Problem	393
27. The Continuous-Time Linear Quadratic Regulator Problem	406
References	417
Index	421
