

CONTENTS

PREFACE

CHAPTER 1 Introduction to Stochastic Processes

1.1 Introduction	1
1.2 Probability space and Random Variables	1
1.3 Conditional Expectations	5
1.4 Markov Processes, Wiener Processes and Jump processes	9
1.5 Ito Stochastic Integrals	13
1.6 Stratonovich Integrals	22

CHAPTER 2 Stochastic Differential Equations

2.1 Introduction	25
2.2 Linear Stochastic Differential Equations	25
2.3 Nonlinear Stochastic Differential Equations	28
2.4 Ito and Stratonovich Calculus and Their Comparison	32
2.5 Backward and Forward Kolmogorov Equations	39
2.6 Change of drift and Girsanov theorem	47

CHAPTER 3 Kalman Filtering for Linear Systems Driven by Wiener Process-I

3.1 Introduction	55
3.2 System Dynamics	55
3.3 Measurement Dynamics	56
3.4 Problem Formulation	56
3.5 Derivation of Optimum Filter	58
3.6 Some Examples	65

3.7 Prediction Problem	68
CHAPTER 4 Kalman Filtering for Linear Systems Driven by Wiener Process-II	
4.1 Introduction	69
4.2 System and Measurement Dynamics (A)	69
4.3 Problem Formulation	70
4.4 Structure of The Filter	70
4.5 Solution of The Problem	70
4.6 System and Measurement Dynamics (B)	72
4.7 Discussions and an Example	75
CHAPTER 5 Discrete Kalman Filtering	
5.1 Introduction	77
5.2 System Dynamics	77
5.3 Measurement Dynamics	78
5.4 Problem Formulation	78
5.5 Error Covariance Update	79
5.6 State Estimate Time Update	81
5.7 Error Covariance Time Update	82
5.8 Necessary Equations for Simulation	83
CHAPTER 6 Linear Filtering with Correlated Noise-I	
6.1 Introduction	85
6.2 System and Measurement Dynamics (A)	85
6.3 Problem Formulation	86
6.4 Structure of The Filter	86
6.5 Solution of The Problem	86
6.6 System and Measurement Dynamics (B)	90
CHAPTER 7 Linear Filtering with Correlated Noise-II	
7.1 Introduction	95
7.2 System and Measurement Dynamics (A)	95
7.3 Problem Formulation	96
7.4 Structure of the Filter	96

7.5 Solution of The Problem	96
7.6 System and Measurement Dynamics (B)	100
7.7 Discussions and Examples	103

CHAPTER 8 Linear Filtering with Correlated Noise-III

8.1 Introduction	105
8.2 System and Measurement Dynamics	105
8.3 Problem Formulation	106
8.4 Structure of The Filter	106
8.5 Solution of The Problem	106
8.6 Special Cases	110
8.7 Discussion and Examples	112

CHAPTER 9 Linear Filtering of Jump Processes

9.1 Introduction	113
9.2 Poisson Noise	113
9.3 System and Measurement Dynamics (A)	113
9.4 Problem Formulation	114
9.5 Structure of The Filter	114
9.6 Solution of The Problem	115
9.7 System and Measurement Dynamics (B)	117
9.8 System and Measurement Dynamics (C)	118
9.9 Examples and Discussion	119

CHAPTER 10 Linear Filtering with Constraints

10.1 Introduction	121
10.2 System and Measurement Dynamics	121
10.3 Problem Formulation	121
10.4 Solution of The Filtering Problem	122
10.5 Dynamically Coupled Systems	129
10.6 Algorithm for Computation-I	130
10.7 Robust Filtering	131
10.8 Algorithm for Computation-II	138

CHAPTER 11 Filtering for Linear Systems Driven by Second Order Random Processes

11.1	Introduction	141
11.2	System and Measurement Dynamics	141
11.3	Problem Formulation	142
11.4	Solution of The Filtering Problem and Special Cases	146
11.5	Dynamically Coupled Systems	152
11.6	Algorithm for Computation	153

CHAPTER 12 Extended Kalman Filtering I, II and III

12.1	Introduction	155
12.2	System and Measurement Dynamics	155
12.3	Problem Formulation (EKF-1)	156
12.4	Problem Solution with EKF-1 Equations	157
12.5	Computational Methods	159
12.6	Problem Formulation and Equations for EKF-2	160
12.7	Comparison of EKF-1 and EKF-2 with Examples	163
12.8	Equations for EKF-3	164

CHAPTER 13 Nonlinear Filtering

13.1	Introduction	167
13.2	System and Measurement Dynamics	167
13.3	Problem Formulation	168
13.4	Derivation of Zakai Equation	168
13.5	Zakai to Kushner Equation and EKF Revisited	178
13.6	Zakai Equation for Jump Processes	183
13.7	Some Examples	185
13.8	Nonlinear Prediction	186

**CHAPTER 14 Numerical Techniques for
Nonlinear Filtering**

14.1	Introduction	187
14.2	Theoretical Basis for Numerical Computation	188
14.3	Galerkin Approximation using Special Basis Functions	192
14.4	Spatial Discretization and Computational Algorithm	195
14.5	Basic Computational Steps	197
14.6	An Alternative Approach	197
14.7	Examples and Simulation Results	199

CHAPTER 15 Partially Observed Control

15.1	Introduction	203
15.2	Linear Systems with Integral Observation	203
15.3	Linear Systems with Dynamic Observation	212
15.4	Fully Observed Nonlinear Systems	213
15.5	Computational Methods	218
15.6	Partially Observed Nonlinear Systems	219
15.7	Some Examples and Discussion	223

CHAPTER 16 System Identification

16.1	Introduction	227
16.2	Fully Observed Linear and Nonlinear Systems	227
16.3	Partially Observed Linear Systems	234
16.4	Partially Observed Nonlinear Systems	237
16.5	A Computational Algorithm	246
