Preface to the Second Edition	xiii
Preface to the First Edition	xv
1 Approaches for statistical inference	1
1.1 Introduction	1
1.2 Motivating vignettes	2
1.2.1 Personal probability	2
1.2.2 Missing data	2
1.2.3 Bioassay	3
1.2.4 Attenuation adjustment	4
1.3 Defining the approaches	4
1.4 The Bayes-frequentist controversy	6
1.5 Some basic Bayesian models	10
1.5.1 A Gaussian/Gaussian (normal/normal) model	11
1.5.2 A beta/binomial model	11
1.6 Exercises	13
2 The Bayes approach	17
2.1 Introduction	17
2.2 Prior distributions	22
2.2.1 Elicited priors	23
2.2.2 Conjugate priors	25
2.2.3 Noninformative priors	28
2.2.4 Other prior construction methods	31
2.3 Bayesian inference	32
2.3.1 Point estimation	32
2.3.2 Interval estimation	35
2.3.3 Hypothesis testing and Bayes factors	38
2.3.4 Example: Consumer preference data	42
2.4 Model assessment	46
2.4.1 Diagnostic measures	46

2.4.2	Model averaging	49
2.5	Nonparametric methods	51
2.6	Exercises	53
3	The empirical Bayes approach	57
3.1	Introduction	57
3.2	Nonparametric EB (NPEB) point estimation	58
3.2.1	Compound sampling models	58
3.2.2	Simple NPEB (Robbins' method)	59
3.2.3	Example: Accident data	60
3.3	Parametric EB (PEB) point estimation	62
3.3.1	Gaussian/Gaussian models	62
3.3.2	Beta/binomial model	67
3.3.3	EB performance of the PEB	69
3.3.4	Stein estimation	70
3.4	Computation via the EM algorithm	74
3.4.1	EM for PEB	74
3.4.2	Computing the observed information	76
3.4.3	EM for NPEB	77
3.4.4	Speeding convergence and generalizations	77
3.5	Interval estimation	78
3.5.1	Morris' approach	79
3.5.2	Marginal posterior approach	80
3.5.3	Bias correction approach	82
3.6	Generalization to regression structures	85
3.7	Exercises	86
4	Performance of Bayes procedures	89
4.1	Bayesian processing	90
4.1.1	Univariate stretching with a two-point prior	90
4.1.2	Multivariate Gaussian model	90
4.2	Frequentist performance: Point estimates	92
4.2.1	Gaussian/Gaussian model	92
4.2.2	Beta/binomial model	94
4.2.3	Generalization	97
4.3	Frequentist performance: Confidence intervals	98
4.3.1	Beta/binomial model	98
4.3.2	Fieller-Creasy problem	103
4.4	Empirical Bayes performance	108
4.4.1	Point estimation	108
4.4.2	Interval estimation	111
4.5	Design of experiments	114
4.5.1	Bayesian design for frequentist analysis	114
4.5.2	Bayesian design for Bayesian analysis	116

4.6	Exercises	119
5	Bayesian computation	121
5.1	Introduction	121
5.2	Asymptotic methods	122
5.2.1	Normal approximation	122
5.2.2	Laplace's method	124
5.3	Noniterative Monte Carlo methods	129
5.3.1	Direct sampling	129
5.3.2	Indirect methods	131
5.4	Markov chain Monte Carlo methods	137
5.4.1	Substitution sampling and data augmentation	137
5.4.2	Gibbs sampling	141
5.4.3	Metropolis-Hastings algorithm	152
5.4.4	Hybrid forms and other algorithms	159
5.4.5	Variance estimation	170
5.4.6	Convergence monitoring and diagnosis	172
5.5	Exercises	183
6	Model criticism and selection	193
6.1	Bayesian robustness	194
6.1.1	Sensitivity analysis	194
6.1.2	Prior partitioning	199
6.2	Model assessment	204
6.3	Bayes factors via marginal density estimation	206
6.3.1	Direct methods	207
6.3.2	Using Gibbs sampler output	208
6.3.3	Using Metropolis-Hastings output	210
6.4	Bayes factors via sampling over the model space	211
6.4.1	Product space search	213
6.4.2	"Metropolized" product space search	215
6.4.3	Reversible jump MCMC	216
6.4.4	Using partial analytic structure	217
6.5	Other model selection methods	219
6.5.1	Penalized likelihood criteria	220
6.5.2	Predictive model selection	223
6.6	Exercises	225
7	Special methods and models	229
7.1	Estimating histograms and ranks	229
7.1.1	Model and inferential goals	230
7.1.2	Triple goal estimates	232
7.1.3	Smoothing and robustness	234
7.2	Order restricted inference	237

7.3	Nonlinear models	239
7.4	Longitudinal data models	242
7.5	Continuous and categorical time series	244
7.6	Survival analysis and frailty models	246
7.6.1	Statistical models	246
7.6.2	Treatment effect prior determination	247
7.6.3	Computation and advanced models	248
7.7	Sequential analysis	249
7.7.1	Model and loss structure	250
7.7.2	Backward induction	252
7.7.3	Forward sampling	252
7.8	Spatial and spatio-temporal models	255
7.8.1	Point source data models	256
7.8.2	Regional summary data models	259
7.9	Exercises	264
8	Case studies	275
8.1	Analysis of longitudinal AIDS data	276
8.1.1	Introduction and background	276
8.1.2	Modeling of longitudinal CD4 counts	277
8.1.3	CD4 response to treatment at two months	286
8.1.4	Survival analysis	287
8.1.5	Discussion	289
8.2	Robust analysis of clinical trials	290
8.2.1	Clinical background	290
8.2.2	Interim monitoring	290
8.2.3	Prior robustness and prior scoping	295
8.2.4	Sequential decision analysis	301
8.2.5	Discussion	304
8.3	Spatio-temporal mapping of lung cancer rates	305
8.3.1	Introduction	305
8.3.2	Data and model description	307
8.3.3	Computational considerations	309
8.3.4	Model fitting, validation, and comparison	309
8.3.5	Discussion	315
	Appendices	319
A	Distributional catalog	321
A.1	Discrete	321
A.1.1	Univariate	321
A.1.2	Multivariate	323
A.2	Continuous	323
A.2.1	Univariate	323

A.2.2	Multivariate	327
B	Decision theory	329
B.1	Introduction	329
B.1.1	Risk and admissibility	330
B.1.2	Unbiased rules	331
B.1.3	Bayes rules	332
B.1.4	Minimax rules	334
B.2	Procedure evaluation and other unifying concepts	335
B.2.1	Mean squared error	335
B.2.2	The variance-bias tradeoff	335
B.3	Other loss functions	336
B.3.1	Generalized absolute loss	337
B.3.2	Testing with a distance penalty	337
B.3.3	A threshold loss function	337
B.4	Multiplicity	338
B.5	Multiple testing	339
B.5.1	Additive loss	339
B.5.2	Non-additive loss	340
B.6	Exercises	341
C	Software guide	345
C.1	Prior elicitation	346
C.2	Random effects models/Empirical Bayes analysis	347
C.3	Bayesian analysis	351
C.3.1	Special purpose programs	352
C.3.2	Teaching programs	356
C.3.3	Markov chain Monte Carlo programs	357
D	Answers to selected exercises	363
	References	381
	Author index	407
	Subject index	413
