1	Introduction	1
1.1	Background	1
1.2	Data sets	1
1.3	References	2
2	Summarizing Data	3
2.1	Tabular and graphical procedures	4
2.2	Numerical summary measures	8
3	Probability	21
3.1	Algebra of sets	22
3.2	Combinatorial methods	24
3.3	Probability	28
3.4	Random variables	33
3.5	Mathematical expectation	34
3.6	Multivariate distributions	39
3.7	Inequalities	48
4	Functions of Random Variables	51
4.1	Finding the probability distribution	52
4.2	Sums of random variables	56
4.3	Sampling distributions	57
4.4	Finite population	59
4.5	Theorems	60
4.6	Order statistics	61
4.7	Range and studentized range	68

5	Discrete Probability Distributions	81
5.1	Bernoulli distribution	82
5.2	Beta binomial distribution	83
5.3	Beta Pascal distribution	84
5.4	Binomial distribution	84
5.5	Geometric distribution	92
5.6	Hypergeometric distribution	94
5.7	Multinomial distribution	101
5.8	Negative binomial distribution	101
5.9	Poisson distribution	103
5.10	Rectangular (discrete uniform) distribution	110
6	Continuous Probability Distributions	111
6.1	Arcsin distribution	114
6.2	Beta distribution	115
6.3	Cauchy distribution	117
6.4	Chi-square distribution	118
6.5	Erlang distribution	125
6.6	Exponential distribution	126
6.7	Extreme-value distribution	128
6.8	F distribution	129
6.9	Gamma distribution	138
6.10	Half-normal distribution	139
6.11	Inverse Gaussian (Wald) distribution	140
6.12	Laplace distribution	141
6.13	Logistic distribution	142
6.14	Lognormal distribution	143
6.15	Noncentral chi-square distribution	145
6.16	Noncentral F distribution	146
6.17	Noncentral t distribution	147
6.18	Normal distribution	148
6.19	Normal distribution: multivariate	150
6.20	Pareto distribution	151
6.21	Power function distribution	152
6.22	Rayleigh distribution	154
6.23	t distribution	155

6.24	Triangular distribution	158
6.25	Uniform distribution	159
6.26	Weibull distribution	160
6.27	Relationships among distributions	161
7	Standard Normal Distribution	165
7.1	Density function and related functions	165
7.2	Critical values	175
7.3	Tolerance factors for normal distributions	175
7.4	Operating characteristic curves	178
7.5	Multivariate normal distribution	181
7.6	Distribution of the correlation coefficient	182
7.7	Circular normal probabilities	185
7.8	Circular error probabilities	186
8	Estimation	187
8.1	Definitions	187
8.2	Cramér–Rao inequality	188
8.3	Theorems	189
8.4	The method of moments	190
8.5	The likelihood function	190
8.6	The method of maximum likelihood	191
8.7	Invariance property of MLEs	191
8.8	Different estimators	191
8.9	Estimators for small samples	193
8.10	Estimators for large samples	194
9	Confidence Intervals	195
9.1	Definitions	195
9.2	Common critical values	196
9.3	Sample size calculations	196
9.4	Summary of common confidence intervals	198
9.5	Confidence intervals: one sample	198
9.6	Confidence intervals: two samples	222
9.7	Finite population correction factor	225
10	Hypothesis Testing	227

10.1	Introduction	227
10.2	The Neyman–Pearson lemma	231
10.3	Likelihood ratio tests	232
10.4	Goodness of fit test	232
10.5	Contingency tables	233
10.6	Bartlett’s test	234
10.7	Cochran’s test	238
10.8	Number of observations required	241
10.9	Critical values for testing outliers	242
10.10	Significance test in 2×2 contingency tables	244
10.11	Determining values in Bernoulli trials	260
11	Regression Analysis	261
11.1	Simple linear regression	261
11.2	Multiple linear regression	268
11.3	Orthogonal polynomials	275
12	Analysis of Variance	281
12.1	One-way anova	282
12.2	Two-way anova	294
12.3	Three-factor experiments	308
12.4	Manova	317
12.5	Factor analysis	317
12.6	Latin square design	319
13	Experimental Design	323
13.1	Latin squares	323
13.2	Graeco–Latin squares	324
13.3	Block designs	325
13.4	Factorial experimentation: 2 factors	327
13.5	2^r Factorial experiments	328
13.6	Confounding in 2^n factorial experiments	330
13.7	Tables for design of experiments	330
13.8	References	341
14	Nonparametric Statistics	343
14.1	Friedman test for randomized block design	344

14.2	Kendall's rank correlation coefficient	344
14.3	Kolmogorov–Smirnov tests	346
14.4	Kruskal–Wallis test	351
14.5	The runs test	353
14.6	The sign test	365
14.7	Spearman's rank correlation coefficient	366
14.8	Wilcoxon matched-pairs signed-ranks test	371
14.9	Wilcoxon rank-sum (Mann–Whitney) test	372
14.10	Wilcoxon signed-rank test	381
15	Quality Control and Risk Analysis	383
15.1	Quality assurance	383
15.2	Acceptance sampling	386
15.3	Reliability	391
15.4	Risk analysis and decision rules	392
16	General Linear Models	397
16.1	Notation	398
16.2	The general linear model	398
16.3	Summary of rules for matrix operations	404
16.4	Quadratic forms	408
16.5	General linear hypothesis of full rank	410
16.6	General linear model of less than full rank	417
17	Miscellaneous Topics	423
17.1	Geometric probability	425
17.2	Information and communication theory	427
17.3	Kalman filtering	431
17.4	Large deviations (theory of rare events)	432
17.5	Markov chains	434
17.6	Martingales	438
17.7	Measure theoretical probability	438
17.8	Monte Carlo integration techniques	439
17.9	Queuing theory	441
17.10	Random matrix eigenvalues	446
17.11	Random number generation	450
17.12	Resampling methods	455

17.13	Self-similar processes	456
17.14	Signal processing	457
17.15	Stochastic calculus	459
17.16	Classic and interesting problems	466
17.17	Electronic resources	487
17.18	Tables	497
18	Special Functions	505
18.1	Bessel functions	506
18.2	Beta function	511
18.3	Ceiling and floor functions	512
18.4	Delta function	512
18.5	Error functions	512
18.6	Exponential function	513
18.7	Factorials and Pochhammer's symbol	515
18.8	Gamma function	515
18.9	Hypergeometric functions	520
18.10	Logarithmic functions	521
18.11	Partitions	523
18.12	Signum function	523
18.13	Stirling numbers	523
18.14	Sums of powers of integers	525
18.15	Tables of orthogonal polynomials	527
18.16	References	528
	Notation	529
	Index	535
