<i>Preface</i>	v
1. Dynamic Graphical Games: Online Adaptive Learning Solutions Using Approximate Dynamic Programming	1
<i>Mohammed I. Abouheaf and Frank L. Lewis</i>	
1.1 Introduction	2
1.2 Graphs and Synchronization of Multi-Agent Dynamical Systems	4
1.2.1 Graphs	4
1.2.2 Synchronization and tracking error dynamics	5
1.3 Multiple Player Cooperative Games on Graphs	7
1.3.1 Graphical games	7
1.3.2 Comparison of graphical games with standard dynamic games	8
1.3.3 Nash equilibrium for graphical games	9
1.3.4 Hamiltonian equation for dynamic graphical games	9
1.3.5 Bellman equation for dynamic graphical games	12
1.3.6 Discrete Hamilton-Jacobi theory: Equivalence of Bellman and discrete-time Hamilton Jacobi equations	14
1.3.7 Stability and Nash solution of the graphical games	19
1.4 Approximate Dynamic Programming for Graphical Games	21
1.4.1 Heuristic dynamic programming for graphical games	21
1.4.2 Dual heuristic programming for graphical games	27
1.5 Coupled Riccati Recursions	33
1.6 Graphical Game Solutions by Actor-Critic Learning	35
1.6.1 Actor-critic networks and tuning	35
1.6.2 Actor-critic offline tuning with exploration	37
1.6.3 Actor-critic online tuning in real-time	38
1.7 Graphical Game Example and Simulation Results	38
1.7.1 Riccati recursion offline solution	39
1.7.2 Simulation results using offline actor-critic tuning	40
1.7.3 Simulation results using online actor-critic tuning	41

1.8	Conclusions	44
2.	Reinforcement-Learning-Based Online Learning Control for Discrete-Time Unknown Nonaffine Nonlinear Systems	49
	<i>Xiong Yang, Derong Liu, Qinglai Wei, and Ding Wang</i>	
2.1	Introduction	49
2.2	Problem Statement and Preliminaries	53
	2.2.1 Dynamics of nonaffine nonlinear discrete-time systems . . .	53
	2.2.2 A single-hidden layer neural network	54
2.3	Controller Design via Reinforcement Learning	55
	2.3.1 A basic controller design approach	55
	2.3.2 Critic neural network and weight update law	60
	2.3.3 Action neural network and weight update law	61
2.4	Stability Analysis and Performance of the Closed-Loop System . .	63
2.5	Numerical Examples	70
	2.5.1 Example 1	70
	2.5.2 Example 2	74
2.6	Conclusions	76
3.	Experimental Studies on Data-Driven Heuristic Dynamic Programming for POMDP	83
	<i>Zhen Ni, Haibo He and Xiangnan Zhong</i>	
3.1	Introduction	83
3.2	Markov Decision Process and Partially Observable Markov Decision Process	86
	3.2.1 Markov decision process	86
	3.2.2 Partially observable Markov decision process	88
3.3	Problem Formulation with the State Estimator	89
3.4	Data-Driven HDP Algorithm for POMDP	91
	3.4.1 Learning in the state estimator network	92
	3.4.2 Learning in the critic and the action network	93
3.5	Simulation Study	94
	3.5.1 Case study one	95
	3.5.2 Case study two	96
	3.5.3 Case study three	98
3.6	Conclusions and Discussion	100
4.	Online Reinforcement Learning for Continuous-State Systems	107
	<i>Yuanheng Zhu and Dongbin Zhao</i>	
4.1	Introduction	107
4.2	Background of Reinforcement Learning	109

4.3	RLSPI Algorithm	110
4.3.1	Policy iteration	110
4.3.2	RLSPI	111
4.4	Examples of RLSPI	114
4.4.1	Linear discrete-time system	114
4.4.2	Nonlinear discrete-time system	118
4.5	MSEC Algorithm	120
4.5.1	State aggregation	121
4.5.2	MSEC	121
4.6	Examples of MSEC	124
4.6.1	Inverted pendulum	125
4.6.2	Results of MSEC	126
4.7	Conclusions	129
5.	Adaptive Iterative Learning Control of Robot Manipulators in the Presence of Environmental Constraints	133
	<i>Xiongxiang He, Zhenhua Qin and Xianqing Wu</i>	
5.1	Introduction	133
5.2	Problem Statement and Preliminaries	135
5.2.1	Dynamics of constrained robot systems	135
5.3	Adaptive Iterative Learning Control Design	140
5.3.1	The dynamic model conversion and assumption	140
5.3.2	Adaptive iterative learning control design	142
5.4	Stability and Convergence Analysis of the Closed-Loop System . .	143
5.5	Numerical Examples	145
5.6	Conclusions	149
6.	Neural Network Control of Nonlinear Discrete-Time Systems in Affine Form in the Presence of Communication Network	151
	<i>Hao Xu, Avimanyu Sahoo and Sarangapani Jagannathan</i>	
6.1	Introduction	151
6.2	NNCS Background and Traditional Optimal Control	154
6.2.1	Nonlinear networked control systems representation	154
6.2.2	Traditional stochastic optimal control	155
6.3	Stochastic Optimal Controller Design for NNCS	157
6.3.1	Online NN-identifier design	157
6.3.2	Stochastic value function setup and critic NN design . . .	160
6.3.3	Action NN estimation of optimal control input	163
6.3.4	Closed-loop stability	164
6.3.5	Simulation results	166
6.4	Extension to Infinite Horizon	171

6.4.1	Approximation of the optimal stochastic value function and control policy using NN	171
6.4.2	Simulation results	175
6.5	Event-Triggered Control of NNCS	178
6.5.1	Event-triggered control design of uncertain continuous time nonlinear system	178
6.5.2	Closed-loop system stability and event condition design . .	182
6.5.3	Simulation results	184
6.6	Conclusions	185
6.7	Appendix	186
6.7.1	The proof of Theorem 6.3	186
6.7.2	The proof of Theorem 6.4	187
7.	Nonlinear and Robust Model Predictive Control of Systems with Unmodeled Dynamics Based on Supervised Learning and Neurodynamic Optimization	193
	<i>Zheng Yan and Jun Wang</i>	
7.1	Introduction	193
7.2	Problem Formulation	196
7.2.1	Nominal stability	197
7.2.2	Quadratic programming formulation	197
7.2.3	Minimax problem formulation	200
7.3	Neural Network Approaches	203
7.3.1	Extreme learning machine	203
7.3.2	Simplified dual network	204
7.3.3	A two-layer recurrent neural network	205
7.3.4	Overall MPC approach	205
7.4	Simulation Results	206
7.4.1	Example 1	206
7.4.2	Example 2	211
7.5	Conclusions	215
8.	Packet-Based Communication and Control Co-Design for Networked Control Systems	221
	<i>Yun-Bo Zhao and Guo-Ping Liu</i>	
8.1	Introduction	221
8.2	Packet-Based Transmission in Networked Control Systems	224
8.3	Packet-Based Control for Networked Control Systems	226
8.3.1	Packet-based control for NCSs: A unified model	226
8.3.2	Design of the packet-based control scheme	228
8.4	Stability of Packet-Based Networked Control Systems	230

8.4.1	A switched system theory approach	231
8.4.2	A delay dependent analysis approach	232
8.5	Packet-Based Controller Design: A GPC-Based Approach	234
8.6	Numerical and Experimental Examples	236
8.6.1	Numerical examples	236
8.6.2	Experimental example	238
8.7	Conclusions	240

9. Review of Some Approximate Privacy Measures of Multi-Agent Communication Protocols 245

Bhaskar DasGupta and Venkatakumar Srinivasan

9.1	Introduction	245
9.1.1	Perfect vs. approximately perfect privacy	248
9.1.2	Privacy analysis in other environments	248
9.2	Various Frameworks to Quantify Privacy of Protocols	249
9.2.1	Communication complexity based approaches	249
9.2.2	Information-theoretic approaches	249
9.2.3	Cryptographic approaches	250
9.2.4	Two-agent differential privacy framework	250
9.3	Benchmark Problems and Functions	251
9.4	Examples of Standard Communication Protocols	252
9.5	A Geometric Approach to Quantify Privacy	254
9.5.1	Tiling functions and dissection protocols	258
9.5.2	Generalization for $d > 2$ agents	260
9.6	Conclusions	260

10. Encoding-Decoding Machines for Online Concept-Drift Detection on Datastreams 263

Cesare Alippi, Giacomo Boracchi, Li Bu, and Dongbin Zhao

10.1	Introduction	263
10.2	A CDT Based on the Encoding-Decoding Machine	266
10.2.1	The observation model	266
10.2.2	The recurrent encoding-decoding machine	267
10.2.3	The encoding-decoding CDT	267
10.3	An Encoding-Decoding Machine Based on SVD	268
10.3.1	The SVD-based encoding-decoding machine	268
10.3.2	The residuals	269
10.3.3	Learning \mathcal{M}_0	270
10.3.4	Extensions	271
10.4	An ICI-Based Encoding-Decoding CDT	271
10.4.1	Designing the encoding-decoding CDT	271

10.4.2	Adaptation	273
10.4.3	Single vs. multiple sensors	274
10.5	Experiments	274
10.5.1	The “ARMA” dataset	276
10.5.2	The “hairdryer” application	277
10.5.3	The mountain temperature application	277
10.6	Conclusions	280
11.	Recognizing sEMG Patterns for Interacting with Prosthetic Manipulation	283
	<i>Zhaojie Ju, Gaoxiang Ouyang, Marzena Wilamowska-Korsak, and Honghai Liu</i>	
11.1	Introduction	283
11.2	Recurrence Plot and Quantification Analysis	286
11.3	Nonlinear Recognition Method	288
11.3.1	Gaussian mixture models	288
11.3.2	Fuzzy Gaussian mixture models	291
11.3.3	Recognizing sEMG signals using FGMMs	293
11.4	Experimental Results	294
11.4.1	Data collection and description	294
11.4.2	Feature extraction and parameter setting	296
11.4.3	Recognition with one single feature	297
11.4.4	Recognition with multiple features	298
11.4.5	Recognition with different classifiers	300
11.5	Conclusions	303
12.	Energy Demand Management Through Uncertain Data Forecasting: A Hybrid Approach	309
	<i>Marco Severini, Stefano Squartini and Francesco Piazza</i>	
12.1	Introduction	309
12.2	Home Energy Management Problem: The Model	311
12.3	Modelling the Thermal Optimization Sub-Problem	312
12.3.1	Notations	312
12.3.2	Heat pump constraints	313
12.4	Neural Networks for Uncertain Data Forecasting	314
12.5	Optimization Algorithms	316
12.6	Smart Home Energy Management: Case Studies and Simulation Results	317
12.6.1	Thermal model characterization	317
12.6.2	Task scheduling and energy cost accounting	319
12.6.3	Solar production	320

12.6.4	Data forecasting	320
12.6.5	Energy management performance	321
12.7	Conclusions	331
13.	Many-Objective Evolutionary Algorithms and Hybrid Performance Metrics	335
	<i>Zhenan He and Gary G. Yen</i>	
13.1	Introduction	335
13.2	Literature Review on Performance Metrics	340
13.2.1	Metrics assessing the number of Pareto optimal solutions in the set	340
13.2.2	Metrics measuring the closeness of the solutions to the true Pareto front	341
13.2.3	Metrics focusing on distribution of the solutions	342
13.2.4	Metrics concerning spread of the solutions	343
13.2.5	Metrics considering both closeness and diversity	344
13.3	Literature Review on Many-Objective Evolutionary Algorithms . .	344
13.4	Performance Metrics Ensemble	346
13.4.1	The proposed framework	346
13.4.2	Double elimination tournament	347
13.5	Experimental Results	352
13.5.1	Selected benchmark test problems	352
13.5.2	Selected performance metrics	354
13.5.3	Parameter setting in experiment	354
13.5.4	Experiment results	354
13.5.5	Observations and insights	358
13.6	Conclusions	360
14.	Synchronization Control of Memristive Chaotic Circuits and Their Applications in Image Encryptions	365
	<i>Shiping Wen and Zhigang Zeng</i>	
14.1	Introduction	365
14.2	Synchronization of Memristive Chua's Circuits	366
14.2.1	Memristive Chua's circuits	367
14.2.2	Adaptive synchronization control of memristive Chua's circuits	368
14.2.3	Numerical simulations	371
14.2.4	Conclusions	374
14.3	Synchronization of Memristive Lorenz Circuits	375
14.3.1	Modeling and fuzzy synchronization of memristive Lorenz circuits	375

14.3.2	Synchronization of fuzzy memristive Lorenz circuits with memristive Chua's circuits	380
14.3.3	Simulation results	381
14.3.4	Conclusions	383
15.	Graph Embedded Total Margin Twin Support Vector Machine and Its Applications	385
	<i>Xiaobo Chen and Jian Yang</i>	
15.1	Introduction	385
15.2	A Brief Review on TSVM	388
15.3	Graph Embedded Total Margin TSVM	390
15.3.1	Model formulation of GTM-TSVM	390
15.3.2	Algorithm derivation	392
15.3.3	Weighting factors for GTM-TSVM	394
15.4	Experimental Results and Analysis	396
15.4.1	Experimental specification	396
15.4.2	A toy example	397
15.4.3	Evaluations on UCI benchmark data sets	397
15.4.4	Experiments on USPS and MIT CBCL database	402
15.5	Conclusions	404
16.	Regularized Covariance Matrix Estimation Based on MDL Principle	407
	<i>Xiuling Zhou, Ping Guo and C. L. Philip Chen</i>	
16.1	Introduction	407
16.2	Theoretical Backgrounds	409
16.2.1	Gaussian mixture model classifier	409
16.2.2	Classical discriminant analysis	410
16.2.3	KLIM method	412
16.3	Covariance Matrix Estimation with Multi-Regularization Parameters	414
16.3.1	KLIM_L method with multi-regularization parameters	414
16.3.2	Multi-regularization parameters estimation	415
16.3.3	Comparison of KLIM_L with regularization methods	418
16.3.4	Experiments and discussions	418
16.4	Covariance Matrix Estimation with Variable Regularization Parameters	422
16.4.1	Covariance matrix estimation with variable regularization parameters	422
16.4.2	Variable regularization matrix estimation	423
16.4.3	Comparisons	425
16.4.4	Experiments and discussions	426

16.5	Conclusions	428
17.	An Evolution of Evolutionary Algorithms with Big Data	431
	<i>Weian Guo, Lei Wang and Qidi Wu</i>	
17.1	Introduction	431
17.2	Design of Hyper-Heuristic Framework for Evolutionary Algorithms	434
17.2.1	Genetic algorithm	434
17.2.2	Particle swarm optimization	435
17.2.3	Biogeography-based optimization	435
17.2.4	Design of framework of hyper-heuristic algorithm	438
17.2.5	Simulations for the novel framework of evolutionary algorithms	439
17.3	Performances Analysis of Evolutionary Algorithms for High-Dimensional Benchmarks	442
17.3.1	Uniform blended migration operator	442
17.3.2	Heuristic migration operator	443
17.3.3	Extended migration operator	443
17.3.4	Numerical simulations for high dimensional benchmarks	444
17.4	Correlation Analysis for Business Intelligence Based on Evolutionary Algorithms	446
17.4.1	Correlation model	451
17.4.2	Simulation for correlation analysis	452
17.5	Conclusions	454
	<i>Index</i>	457
