

Contents

	Preface	vii
1	Introduction: models and mathematics	1
2	Convexity	9
3	Simplexes	19
4	Sperner's lemma	23
5	The Knaster-Kuratowski-Mazurkiewicz lemma	26
6	Brouwer's fixed point theorem	28
7	Maximization of binary relations	31
8	Variational inequalities, price equilibrium, and complementarity	38
9	Some interconnections	44
10	What good is a completely labeled subsimplex	50
11	Continuity of correspondences	53
12	The maximum theorem	63
13	Approximation of correspondences	67
14	Selection theorems for correspondences	69
15	Fixed point theorems for correspondences	71
16	Sets with convex sections and a minimax theorem	74
17	The Fan-Browder theorem	78
18	Equilibrium of excess demand correspondences	81
19	Nash equilibrium of games and abstract economies	88
20	Walrasian equilibrium of an economy	95

vi **Contents**

21	More interconnections	104
22	The Knaster-Kuratowski-Mazurkiewicz-Shapley lemma	109
23	Cooperative equilibria of games	112
	References	122
