

CONTENTS

Preface	xi
1 An introduction to the philosophy and aims of numerical taxonomy	1
1.1 Introduction	1
1.2 Systematics, classification and taxonomy	1
1.3 The construction of taxonomic hierarchies by traditional and numerical taxonomy: comparison of methods	2
1.4 The philosophy of taxonomy	4
1.5 Classification and inferences concerning patterns of evolution	7
1.6 Summary	9
2 Taxonomic characters	11
2.1 Introduction	11
2.2 Number of characters	12
2.3 Type of characters and coding of character states	14
2.3.1 <i>Qualitative characters</i>	14
2.3.2 <i>Quantitative characters</i>	18
2.4 Weighting of characters	20
2.5 Homology of characters	21
2.6 Summary	23
3 The measurement of similarity	25
3.1 Introduction	25
3.2 Similarity measures for binary characters	25
3.2.1 <i>The simple matching coefficient</i>	26
3.2.2 <i>Jaccard's coefficient</i>	26
3.3 Similarity measures for qualitative characters having more than two states	29
3.4 Similarity measures for quantitative characters	30
3.5 Measures of dissimilarity and distance	31
3.6 Gower's similarity coefficient	39
3.7 Similarity and distance between populations	41

3.7.1	<i>Qualitative characters</i>	41
3.7.2	<i>Quantitative characters</i>	43
3.8	Summary	45
4	Principal components analysis	46
4.1	Introduction	46
4.2	Principal components analysis—geometrical interpretation	47
4.3	A brief mathematical account of principal components analysis	49
4.4	Examples	51
4.5	Principal components plots	55
4.6	Factor analysis	57
4.7	Summary	58
5	Multidimensional scaling	59
5.1	Introduction	59
5.2	Classical multidimensional scaling	59
5.2.1	<i>Principal coordinates analysis—technical details</i>	61
5.2.2	<i>Principal coordinates analysis—an example</i>	65
5.3	Other methods of multidimensional scaling	68
5.3.1	<i>Non-metric multidimensional scaling—technical details</i>	70
5.3.2	<i>Non-metric multidimensional scaling—examples</i>	71
5.4	Minimum spanning trees	73
5.5	Summary	76
6	Cluster analysis	77
6.1	Introduction	77
6.2	Hierarchical clustering techniques	77
6.2.1	<i>Single-linkage clustering</i>	78
6.2.2	<i>Complete-linkage clustering</i>	80
6.2.3	<i>Group-average clustering</i>	81
6.2.4	<i>Centroid clustering</i>	82
6.3	Properties of hierarchical techniques	85
6.4	Other clustering methods	87
6.4.1	<i>Monothetic divisive clustering</i>	87
6.4.2	<i>Minimization of trace (W)</i>	88
6.4.3	<i>A multivariate mixture model for cluster analysis</i>	89
6.4.4	<i>Jardine and Sibson's K-dend clustering method</i>	89
6.5	An example	91
6.6	The evaluation of results and other problems	94
6.6.1	<i>Measuring clustering tendency</i>	95
6.6.2	<i>Global fit of hierarchy</i>	96
6.6.3	<i>Partitions from a hierarchy</i>	96
6.7	What is a cluster?	101
6.8	Summary	104

7	Identification and assignment techniques	106
7.1	Introduction	106
7.2	Diagnostic keys	107
7.2.1	<i>The construction of diagnostic keys</i>	110
7.3	Probabilistic assignment techniques	112
7.3.1	<i>Fisher's linear discriminant function</i>	115
7.3.2	<i>Canonical variate analysis</i>	116
7.3.3	<i>An example of canonical variate analysis</i>	117
7.4	Summary	121
8	The construction of evolutionary trees	122
8.1	Introduction	122
8.2	Evolution as a branching process	122
8.3	The principle of minimal evolution	125
8.4	The topology of the tree	127
8.5	Optimization of trees	128
8.6	Reticulate evolution: the problem of hybrids	129
8.7	Gene phylogenies	131
8.8	Summary	136
	References	138
	Author Index	145
	Subject Index	147
