

CONTENTS

CHAPTER 1. <i>Stationary Stochastic Processes and Their Representations</i>	
1.0	Introduction 21
1.1	What Is a Stochastic Process?. 21
1.2	Continuity in the Mean 24
1.3	Stochastic Set Functions of Orthogonal Increments. 25
1.4	Orthogonal Representations of Stochastic Processes 27
1.5	Stationary Processes 29
1.6	Representations of Stationary Processes 33
1.7	Time and Ensemble Averages 42
1.8	Vector Processes 44
1.9	Operations on Stationary Processes. 49
1.10	Harmonizable Stochastic Processes 59
CHAPTER 2. <i>Statistical Questions when the Spectrum is Known (Least Squares Theory)</i>	
2.0	Introduction 61
2.1	Preliminaries 61
2.2	Prediction 65
2.3	Interpolation 82
2.4	Filtering of Stationary Processes 85
2.5	Treatment of Linear Hypotheses with Specified Spectrum. 86
CHAPTER 3. <i>Statistical Analysis of Parametric Models</i>	
3.0	Introduction 91
3.1	Periodogram Analysis 91
3.2	The Variate Difference Method 94
3.3	Effect of Smoothing of Time Series (Slutzky's Theorem) 95
3.4	Serial Correlation Coefficients for Normal White Noise 97
3.5	Approximate Distributions of Quadratic Forms 101
3.6	Testing Autoregressive Schemes and Moving Averages 106
3.7	Estimation and the Asymptotic Distribution of the Coefficients of an Autoregressive Scheme 111
3.8	Discussion of the Methods Described in this Chapter 115

CHAPTER 4. *Estimation of the Spectrum*

4.0	Introduction	117
4.1	A General Class of Estimates	117
4.2	An Optimum Property of Spectrograph Estimates	123
4.3	A Remark on the Bias of Spectrograph Estimates	129
4.4	The Asymptotic Variance of Spectrograph Estimates	131
4.5	Another Class of Estimates	137
4.6	Special Estimates of the Spectral Density	145
4.7	The Mean Square Error of Estimates	153
4.8	An Example from Statistical Optics	155

CHAPTER 5. *Applications*

5.0	Introduction	158
5.1	Derivations of Spectra of Random Noise	158
5.2	Measuring Noise Spectra	160
5.3	Turbulence	163
5.4	Measuring Turbulence Spectra	171
5.5	Basic Ideas in a Statistical Theory of Ocean Waves	174
5.6	Other Applications	177

CHAPTER 6. *Distribution of Spectral Estimates*

6.0	Introduction	179
6.1	Preliminary Remarks	179
6.2	A Heuristic Derivation of a Limit Theorem	182
6.3	Preliminary Considerations	185
6.4	Treatment of Pure White Noise	188
6.5	The General Theorem	190
6.6	The Normal Case	195
6.7	Remarks on the Nonnormal Case	198
6.8	Spectral Analysis with a Regression Present	202
6.9	Alternative Estimates of the Spectral Distribution Function	204
6.10	Alternative Statistics and the Corresponding Limit Theorems	207
6.11	Confidence Band for the Spectral Density	208
6.12	Spectral Analysis of Some Artificially Generated Time Series	214

CHAPTER 7. *Problems in Linear Estimation*

7.0	Preliminary Discussion	226
7.1	Estimating Regression Coefficients	231
7.2	The Regression Spectrum	233
7.3	Asymptotic Expression for the Covariance Matrices	235

7.4	Elements of the Spectrum.	241
7.5	Polynomial and Trigonometric Regression.	245
7.6	More General Trigonometric and Polynomial Regression	248
7.7	Some Other Types of Regression	254
7.8	Detection of Signals in Noise	255
7.9	Confidence Intervals and Tests	257
CHAPTER 8. Assorted Problems		
8.0	Introduction	260
8.1	Prediction when the Conjectured Spectrum is not the True One	260
8.2	Uniform Convergence of the Estimated Spectral Density to the True Spectral Density.	262
8.3	The Asymptotic Distribution of an Integral of a Spectro- graph Estimate	263
8.4	The Mean Square Error of Prediction when the Spectrum is Estimated	267
8.5	Other Types of Estimates of the Spectrum	270
8.6	The Zeros and Maxima of Stationary Stochastic Processes	271
8.7	Prefiltering of a Time Series	273
8.8	Comments on Tests of Normality	275
PROBLEMS		278
APPENDIX ON COMPLEX VARIABLE THEORY		288
BIBLIOGRAPHY		294
