

CONTENTS

Introduction	1
CHAPTER 1	
Censuses	4
1.1. Census of Two Qualitative Characteristics	4
1.2. A Census of Quantitative Characteristics	12
1.3. First Definitions of Discrete Probabilities	24
1.4. Pairs of R.V.'s and Correspondence Analysis	40
CHAPTER 2	
Heads or Tails. Quality Control	53
2.1. Repetition of n Independent Experiments	53
2.2. A Bernoulli Sample	60
2.3. Estimation	71
2.4. Tests, Confidence Intervals for a Bernoulli Sample, and Quality Control	83
2.5. Observations of Indeterminate Duration	91
CHAPTER 3	
Probabilistic Vocabulary of Measure Theory. Inventory of the Most Useful Tools	102
3.1. Probabilistic Models	103
3.2. Integration	115
3.3. The Distribution of a Measurable Function	124
3.4. Convergence in Distribution	140

CHAPTER 4	
Independence: Statistics Based on the Observation of a Sample	151
4.1. Sequence of n Observations—Product Measure Spaces	151
4.2. Independence	157
4.3. Distribution of the Sum of Independent Random Vectors	168
4.4. A Sample from a Distribution and Estimation of this Distribution	173
4.5. Nonparametric Tests	188
CHAPTER 5	
Gaussian Samples, Regression, and Analysis of Variance	201
5.1. Gaussian Samples	201
5.2. Gaussian Random Vectors	218
5.3. Central Limit Theorem on \mathbb{R}^k	225
5.4. The χ^2 Test	227
5.5. Regression	233
CHAPTER 6	
Conditional Expectation, Markov Chains, Information	241
6.1. Approximation in the Least Squares Sense by Functions of an Observation	241
6.2. Conditional Expectation—Extensions	251
6.3. Markov Chains	258
6.4. Information Carried by One Distribution on Another	270
CHAPTER 7	
Dominated Statistical Models and Estimation	278
7.1. Dominated Statistical Models	278
7.2. Dissimilarity in a Dominated Model	290
7.3. Likelihood	299
CHAPTER 8	
Statistical Decisions	308
8.1. Decisions	308
8.2. Bayesian Statistics	314
8.3. Optimality Properties of Some Likelihood Ratio Tests	327
8.4. Invariance	335
Bibliography	344
Notation and Conventions	349
Index	357
